2018 Collections and Evaluation

The following analytical report details the annual program performance for mercury thermostat collection in the state of California in 2018. A few of the program highlights for 2018 are included below:

- In 2018 the program **collected 179.7 lbs. of mercury** in California. Since 2001, the annual quantity of mercury collected in California has averaged 138.8 lbs.
- The program collected **13,710 whole thermostats in 2018**. Since 2001, the average thermostat count per year is 10,582.
- The **number of whole thermostats collected per bin in 2018 was 23 thermostats.**
- The counties with the most bins and thermostats returned in 2018 were **Los Angeles County (146 bins, 3,808 thermostats), Orange County (63 bins, 2,056 thermostats), and San Diego County (72 bins, 2,002 thermostats).**
- In 2018, **49% of the partner locations returned at least one bin.**
- **A total of 807 'Miss You' calls and 814 site visits were placed in 2018** which resulted in a positive relationship building activity to help continue bin returns.
- In addition to 13,710 whole thermostats, **3,630 loose switches were collected, bringing the total number of "thermostat equivalents" returned in 2018 to 15,773**.

Section 1: Program Analytics

Section 1 of this report examines the annual performance of the thermostat collection recycling program in terms of bins, thermostats, and mercury collected as well as the year-over-year progression of the program. On average, the program has collected 138.8 lbs. of mercury and 10,582 whole thermostats per year since 2001. In 2018, the program collected 179.7 lbs. of mercury from 13,710 thermostats and 3,630 loose switches. Figure 1 below displays the total number of bins, the total number of thermostats, and the quantity of mercury collected in the California since the beginning of the program.

Figure 2 displays the number of bins collected in California since the initiation of the collection program, as well as the total number of bins collected in the U.S. over the same period. The number of bins collected in California has generally increased from 2000 to 2014. In 2017, bin returns increased again, peaking with highest number of bins returned in 2018 with 587 bins.

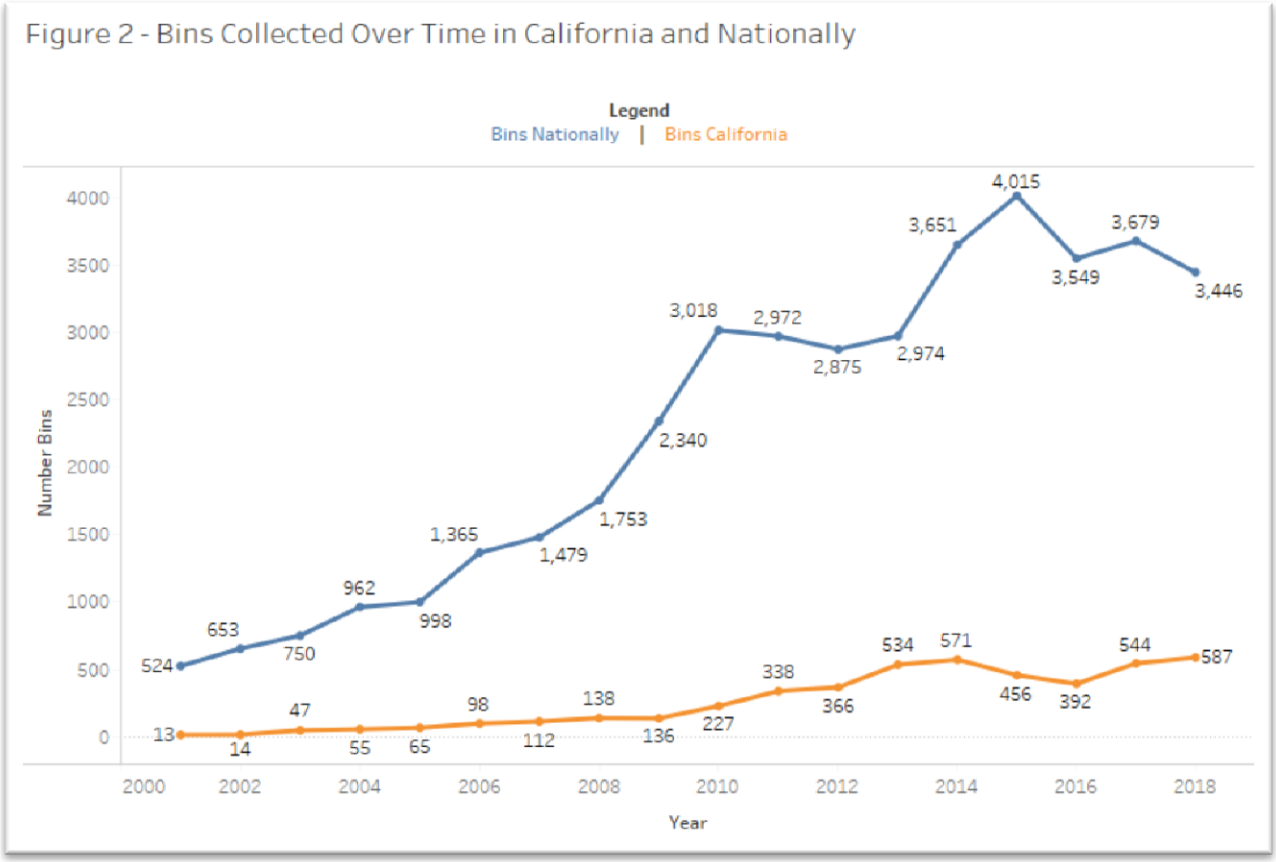

Figure 3 displays the quantity of mercury collected in the California over time as well as the annual percent change in the California and nationally.

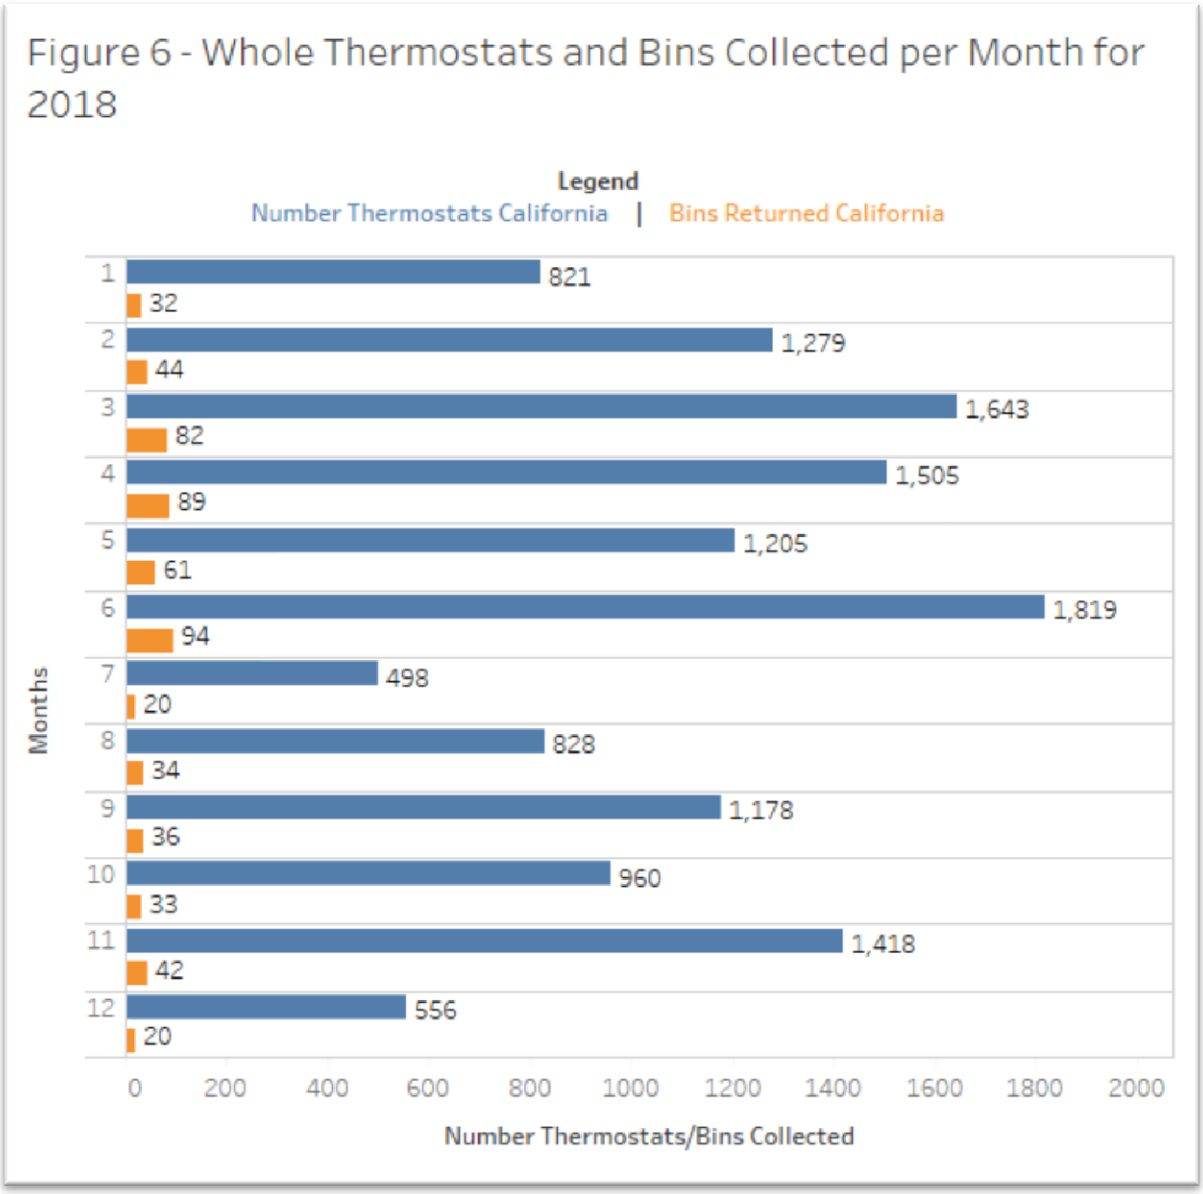
Figure 6 displays the monthly distribution of bins and thermostats collected in California in 2018. The months with the greatest number of thermostats returned were March (1,643 thermostats, 82 bins), and June (1,819 thermostats, 94 bins). The months with the greatest number of bins returned were April (89 bins), and June (94 bins). Conversely, the months with the least activity in 2018 were July and December.



The highest number of thermostats per bin returned occurred in September and November (32.7 and 33.8 thermostats per bin each month, respectively). Figure 7 shows the average number of thermostats per bin returned per month for the year.

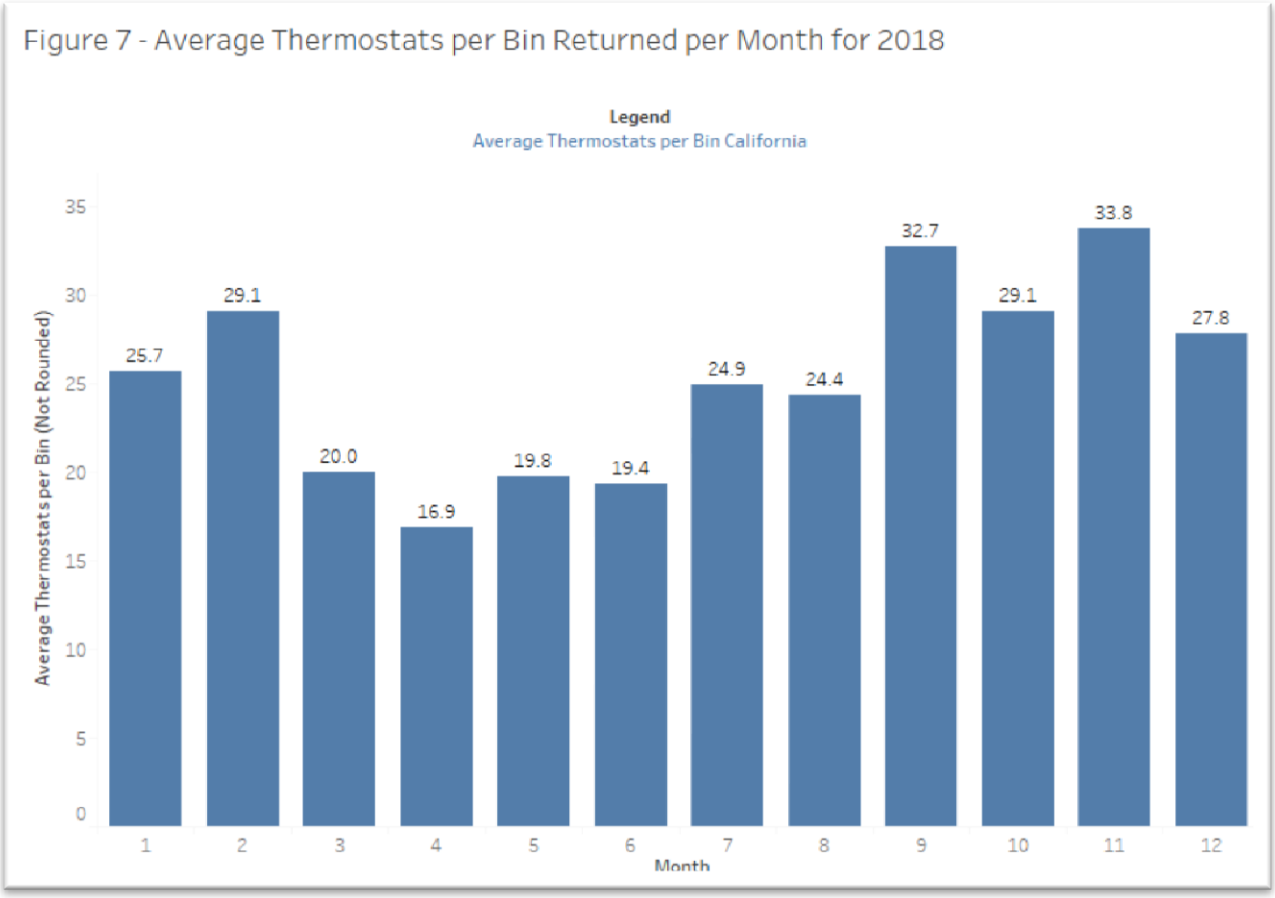


Figure 8 displays the average number of thermostats returned per bin in the California and in the U.S. since the beginning of the California program. Nationally, the number of thermostats per bin has been decreasing annually since 2000. In California a similar pattern is observed, with the exception of a few years. The number of thermostats per bin in 2018 (23 thermostats per bin avg.) decreased from 2017 (28 thermostats per bin avg.) which is the lowest to date.

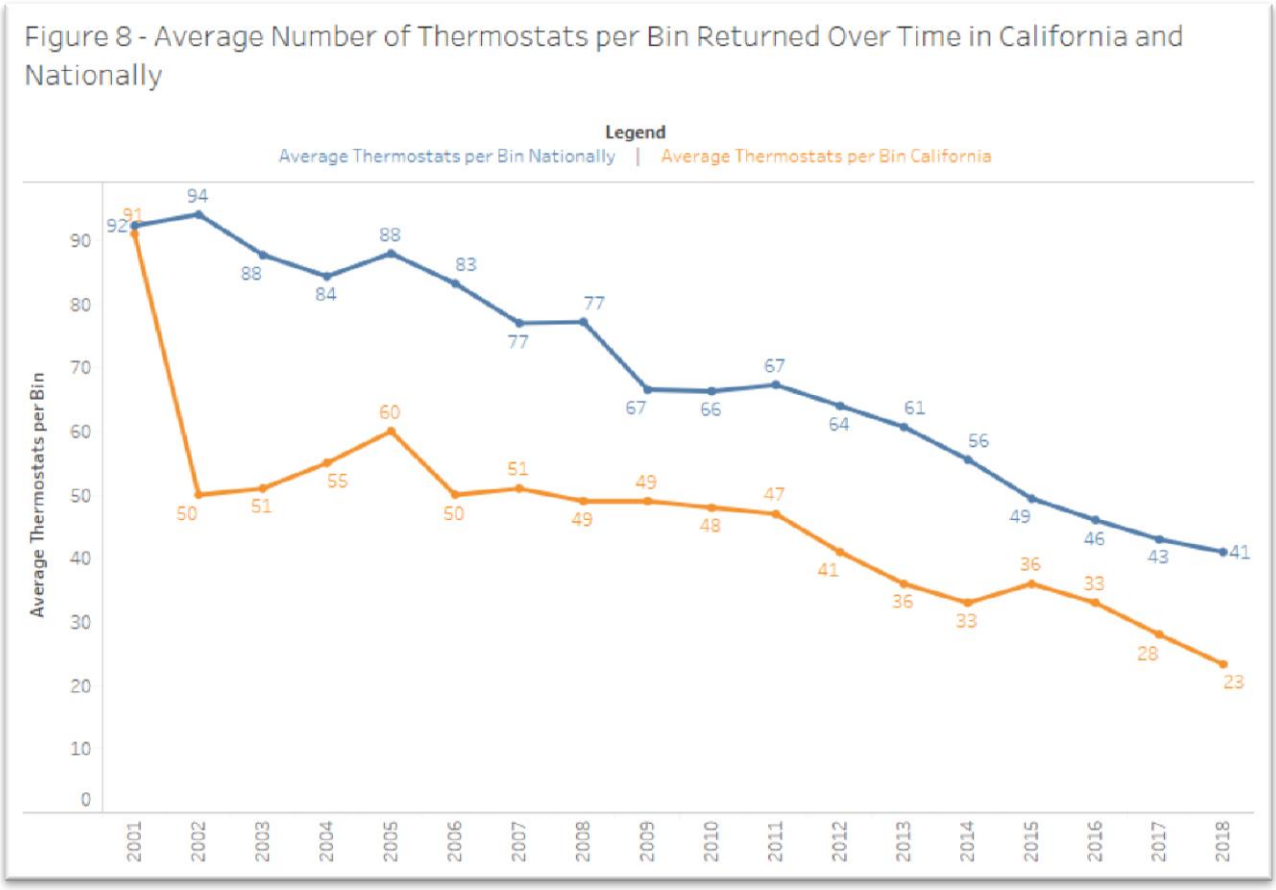

Figure 9 plots the total bins returned over time along with the average number of thermostats per bin over the same period. In general, the number of bins returned in California increased steadily for the most part from 2001 to 2018. At the same time, thermostats per bin have seen a downward trend. A negative correlation has been identified between the number of bins returned and the number of thermostats per bin.

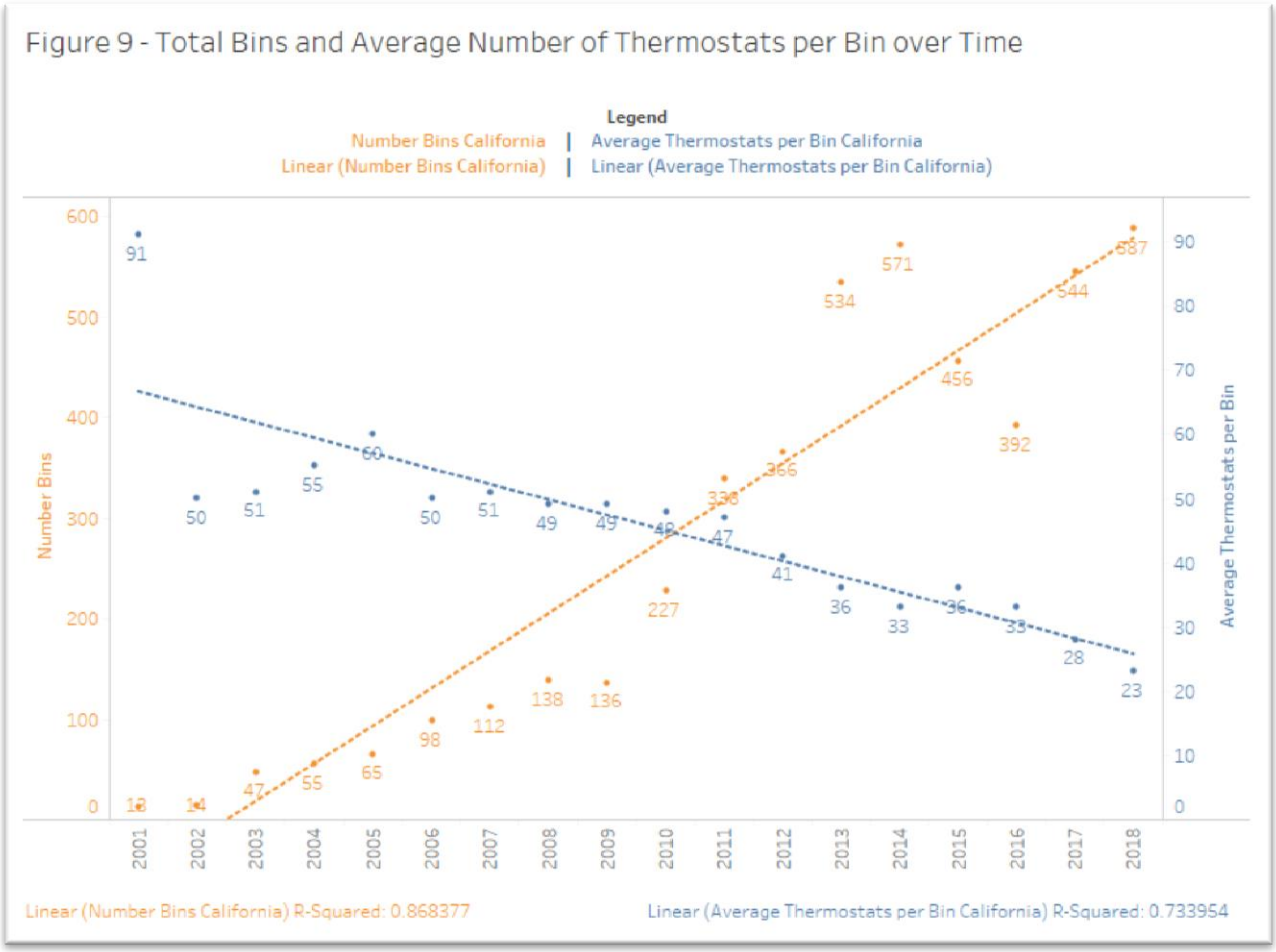
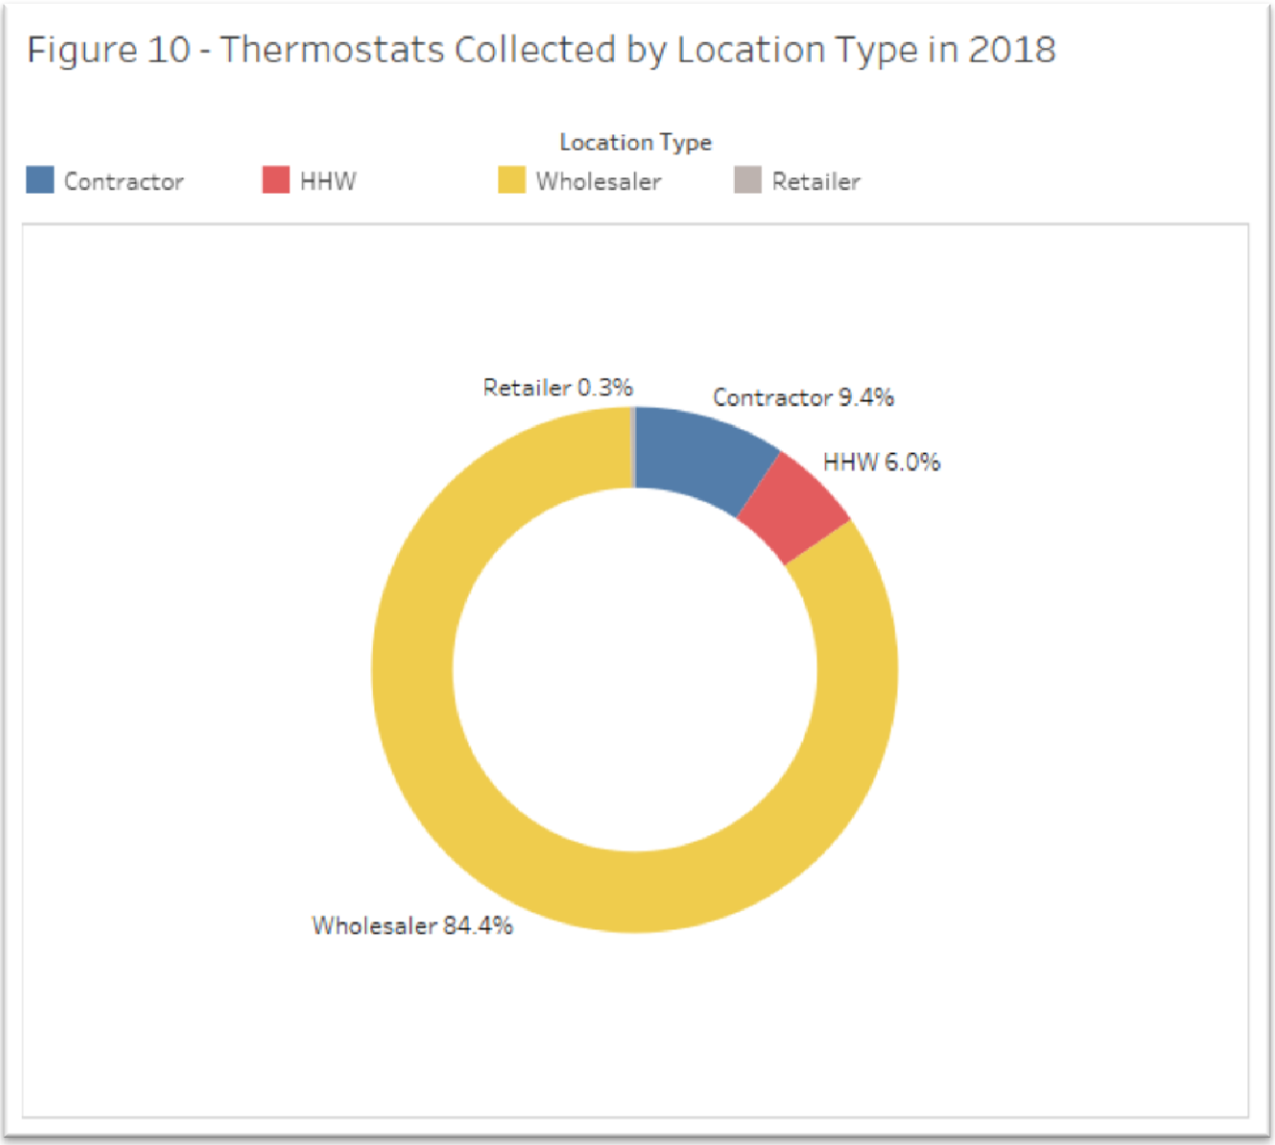
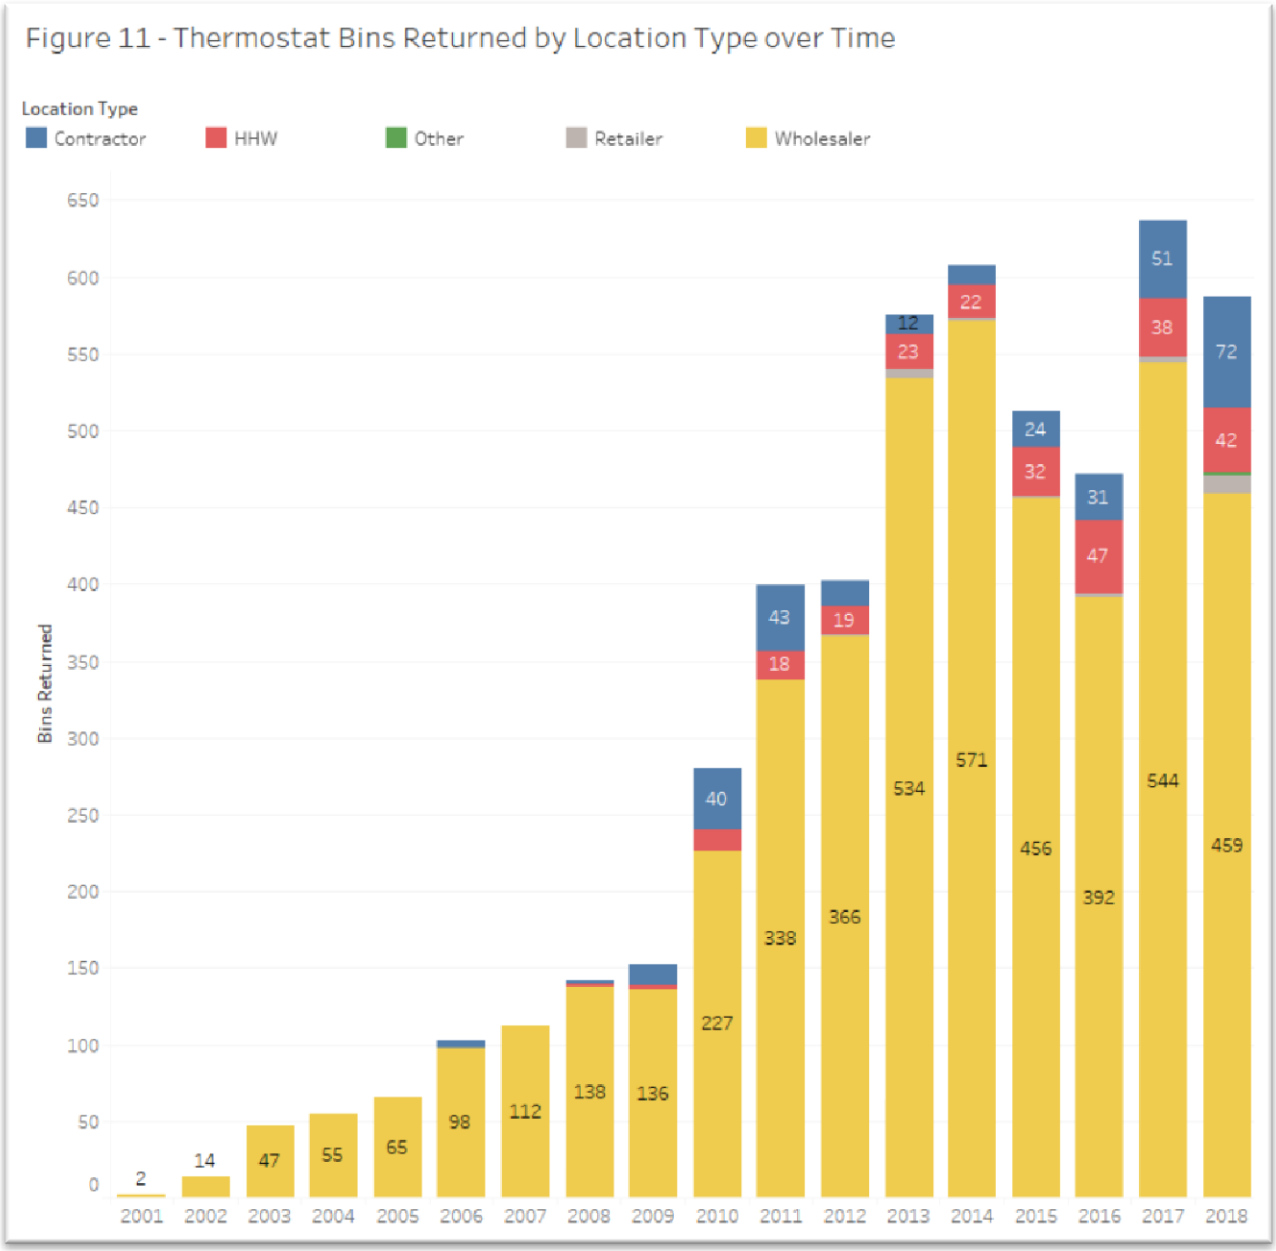


SECTION 2: Channel Partner Analysis

Section 2 of the report examines the partner locations in more detail. Most thermostats collected in the California were through wholesalers (84.4%) with the remaining thermostats collected by contractors (9.4%), household hazardous waste facilities (6%), and retailers (0.3%). Figure 10 shows the distribution of thermostats collected by location type in 2018.



The number of bins returned in 2018 increased from 2017 levels across contractors, household hazardous waste facilities, and retailers. Wholesalers decreased to 459 from 544 bins. Figure 11 displays the change in the number of bins returned by thermostat collection type over time in the California.



In 2018, 49% of California locations possessing a collection bin sent back at least one bin for recycling. The distribution is displayed in Figure 12.

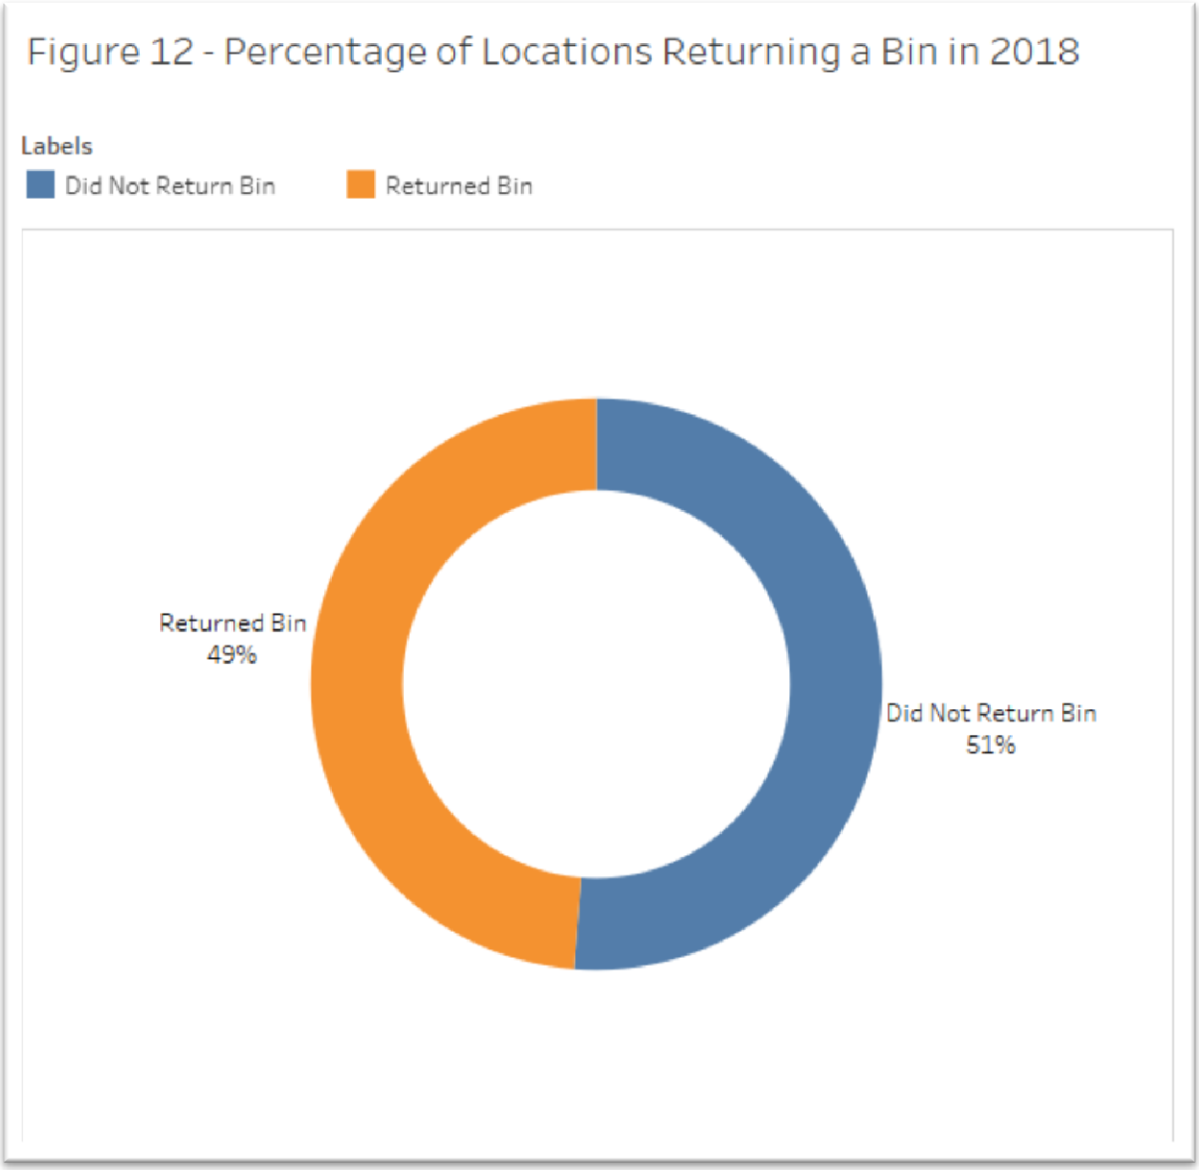


Figure 13 displays the total bins and thermostats returned by county in 2018. An analysis of the top performing counties revealed that Los Angeles County (146 bins, 3,808 thermostats), Orange County (63 bins, 2,056 thermostats), and San Diego County (72 bins, 2,002 thermostats) returned the greatest number of bins and thermostats in 2018.

TRC partner Johnstone Supply (2,667 thermostats) returned the highest number of thermostats in California in 2018, followed by US Air Conditioning Distributors (USACD) (2,402 thermostats) and Refrigeration Supplies Distributor (RSD) (854 thermostats). Apart from these locations, 3 program partners returned more than 500 thermostats each. Figure 14 displays the top performers in terms of total thermostats returned in 2018.

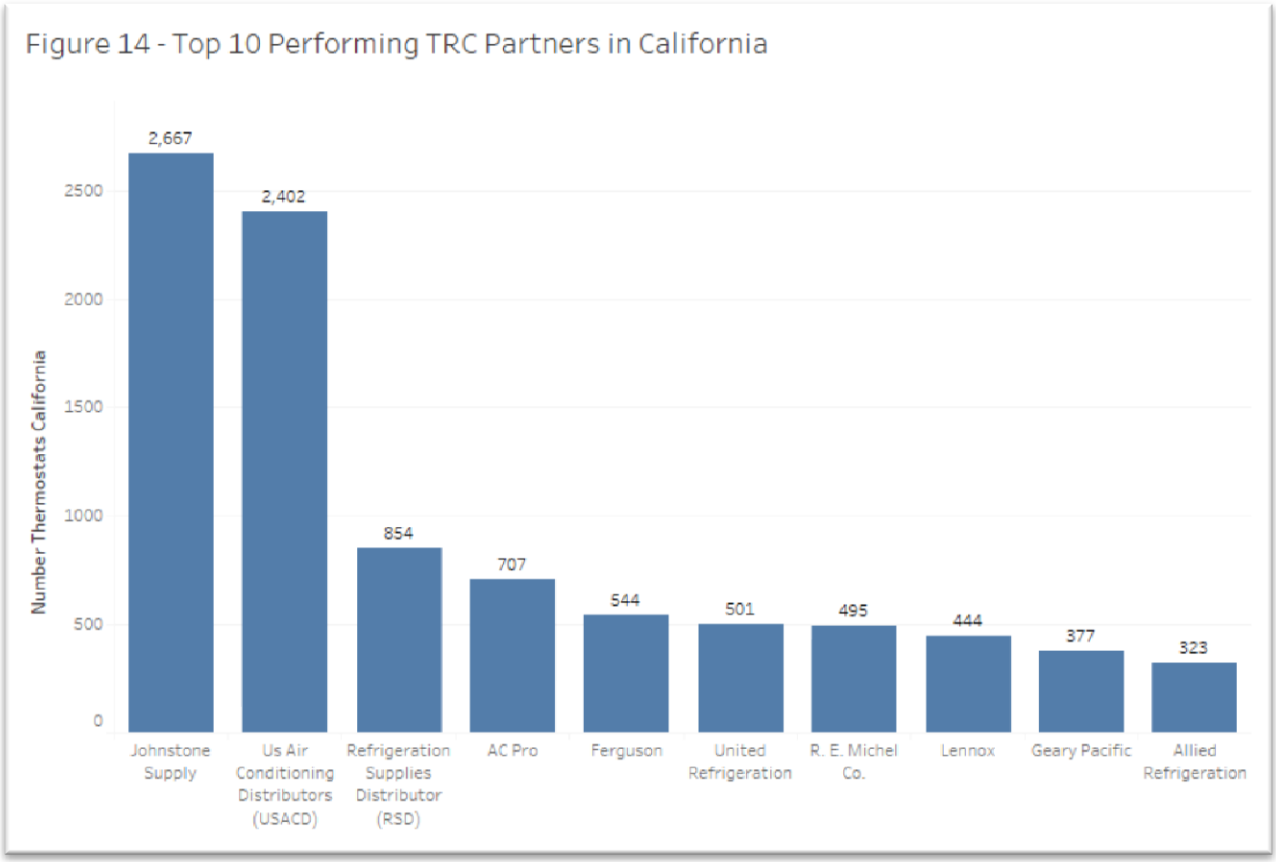

Figure 15 includes the top performers for 2018 by each of the following categories: total bins returned, total thermostats returned, and average number of thermostats per bin.

TRC conducted several activities in 2018 to increase the number of bins and thermostats returned in California. These activities included site visits and 'miss you' calls to collection locations that may not have returned a bin recently. In 2018, 814 site visits were conducted in California, and a total of 807 'miss you' calls were placed. Figure 16 displays the relationship between the number of site visits per month, the bins returned per month, and the number of thermostats (in 100's) returned per month.

Figure 16 - Relationship Between Site Visits and Bins and Thermostats Returned Per Month in 2018

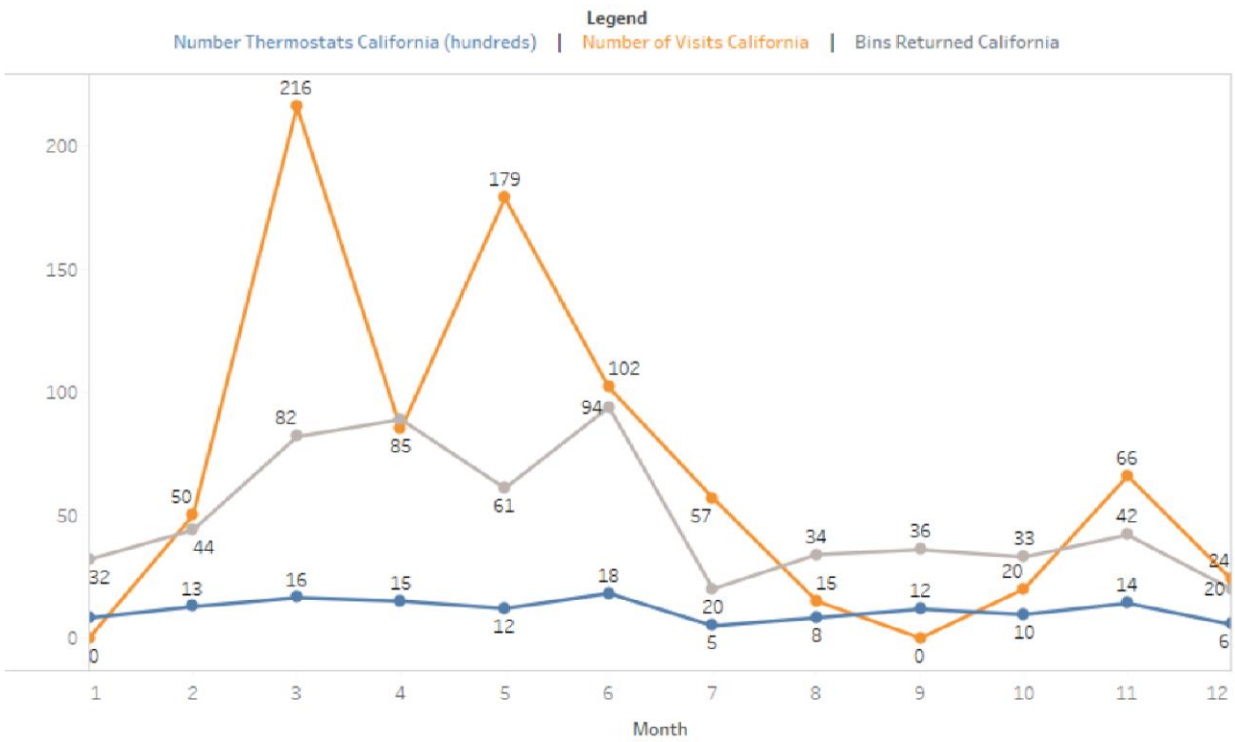

Figure 17 displays the relationship between the number of calls per month, the bins returned per month and the number of thermostats (by 100's) returned per month. Calls were placed in the months of February, March, April, May, June, August, September, and November.

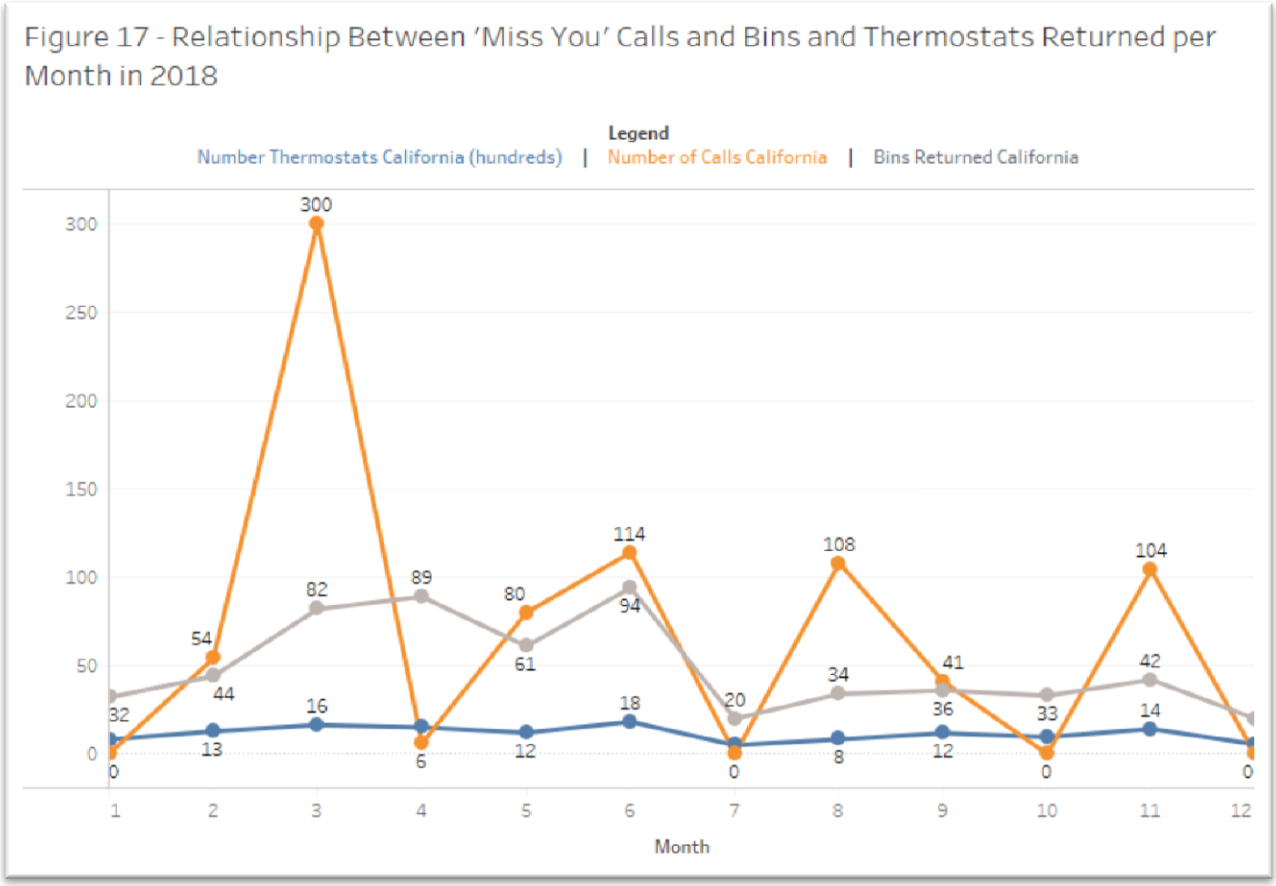

Figure 18 examines the return rates of four groups (if applicable) – locations that received at least one visit and locations that received both a call and visit. The rate of active participation (which refers to locations that returned at least one bin) in 2018 was 76% for locations that received a visit but only 41% for both visited and called locations.

SECTION 3: Comparisons to National and Other States' Data

To compare how the California collection partners performed in 2018, the national average for the number of bins returned per locations that returned at least one bin was calculated and compared to the California average since 2012. The average number of bins does not include locations that did not return any bins in that year. It should be noted that when making comparisons to California, each state has different regulations, different mix of housing types, local policies, and incentives that may have a unique impact on returns. Overall, the average number of bins returned per location per year was lower in California than the U.S. average, as shown in Figure 19.

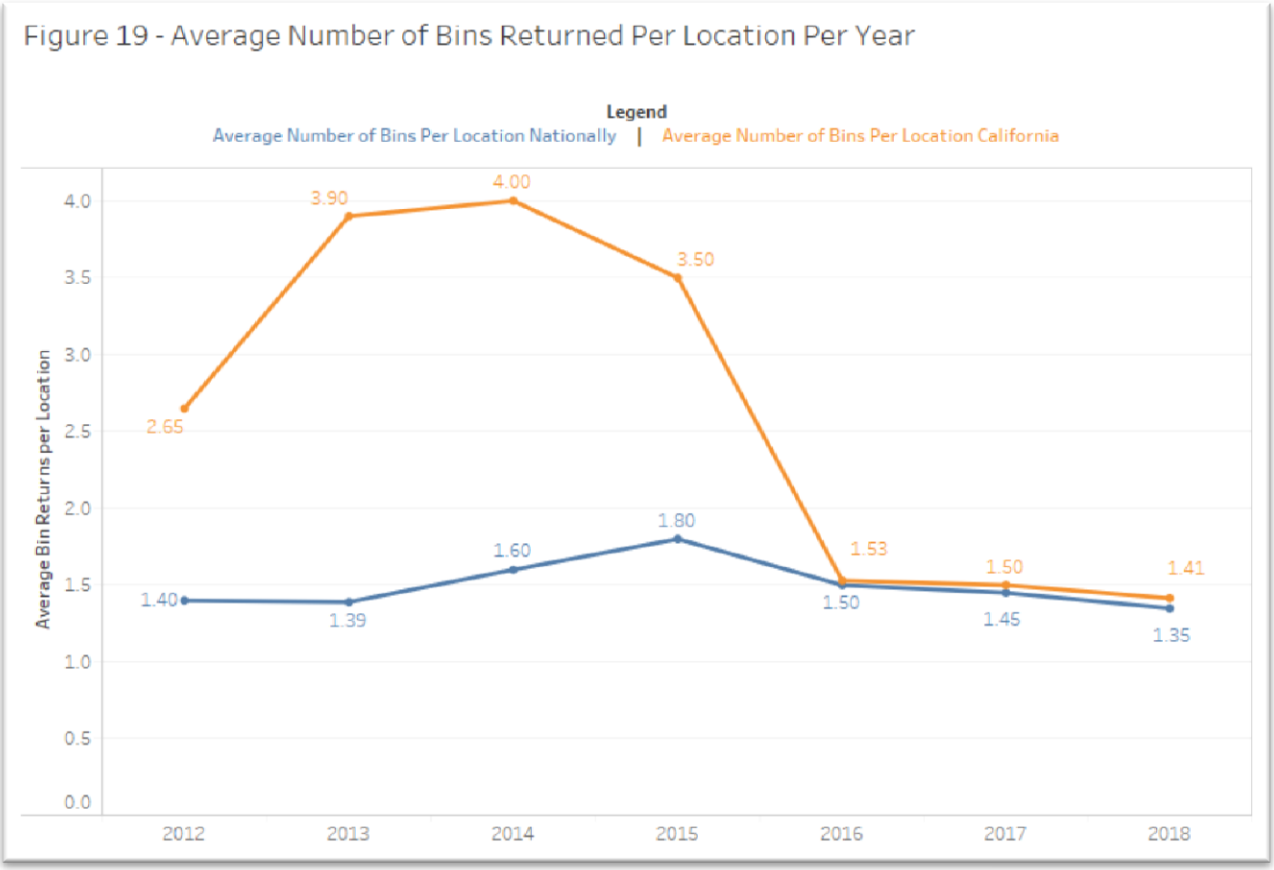

Figure 20 displays the locations in California that returned more than one bin in a given year since 2015, and Figure 21 displays the top 10 partners in the U.S. over the same period in terms of the number of bins returned.

Figure 22 displays total percentage of locations that actively participated in the program (active participation defined as sending back at least one bin) in 2018, for all the states that mandate thermostat returns reporting as well as the U.S. national average for all states (reporting and non-reporting). In 2018, 49% of the locations in California returned at least one bin compared to a national average of 33%. The highest percentage of locations returning a bin in 2018 amongst states that mandate thermostat returns reporting was Rhode Island (73%).

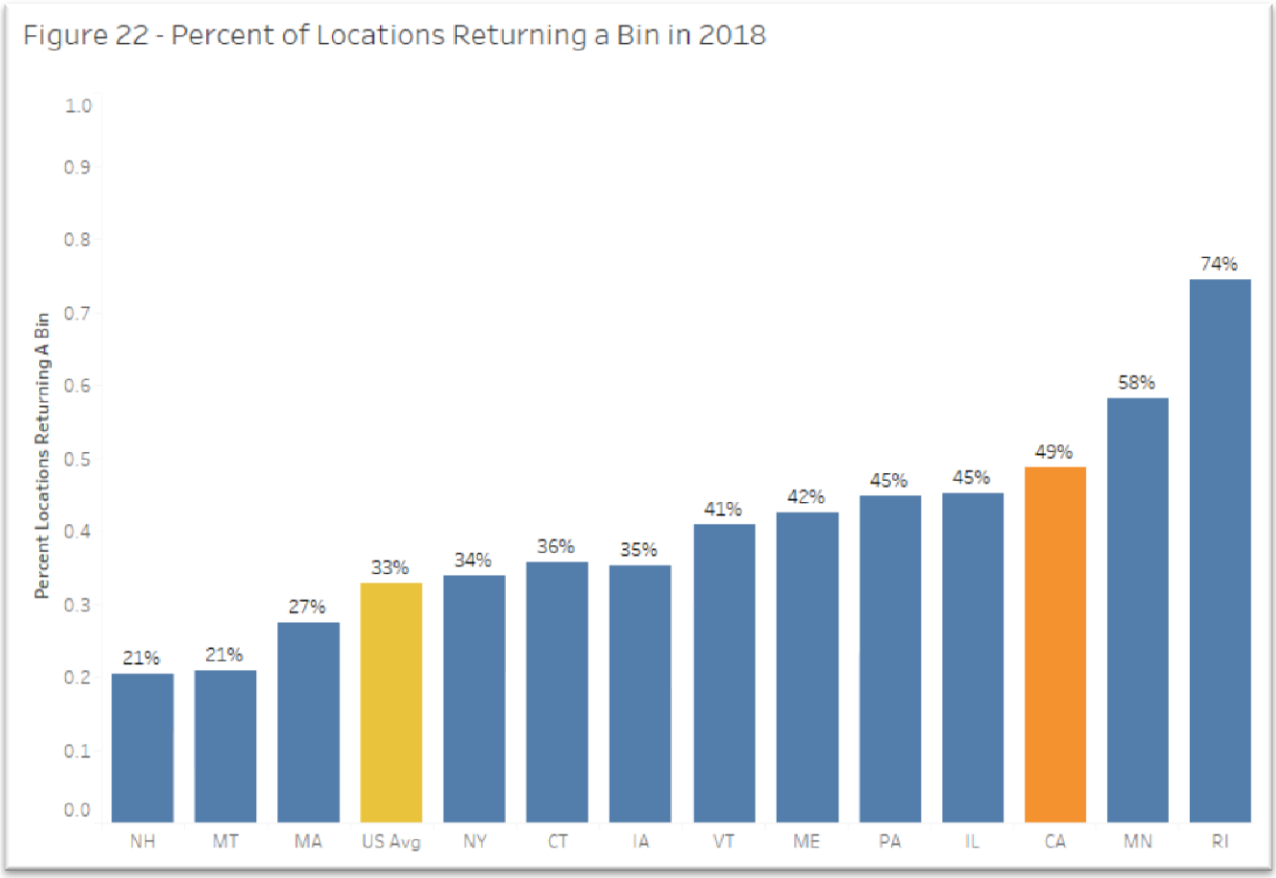

Figure 23 compares the California and national rates for several analytics. These include: total whole thermostats, bins, and loose switches collected, number of thermostats collected by total locations and per actively participating locations, number of thermostats per bin returned on average, equivalent average, number of mercury thermostat equivalents returned in 2018, and finally percent change in mercury thermostat conversion from 2017 to 2018. The equivalent average is an average of the number of switches in whole thermostats collected in the California, and it is used to represent an equivalent number of thermostats from returned loose switches. The thermostat equivalent number includes the totals of whole thermostats returned plus the number of thermostats estimated from loose switches. The states displayed are those that mandate thermostat returns reporting and the U.S. average is for all states that return bins (reporting and non-reporting).

2018 Collections by Brand

In California, Thermostat Recycling Corporation (TRC) recovered the equivalent of 15,771 mercury thermostats from 13,710 whole mercury thermostats plus 3,630 mercury switches removed from thermostats. A total of 179.68 pounds of mercury was diverted from solid waste.

*Please note the explanation of the converted thermostats or thermostat equivalents below.[1] An example of the mercury ampoule is shown below.

As required by the California statute, a table of thermostat brand holder with the corresponding thermostats, count of switches and pounds of mercury recycled is below. It is important to note that there still remain non-members whose thermostats the TRC collection program recycles. They are listed in the table as "Non-Member Brands". Also, there were a few changes that affected TRC's membership.

1. Lear Siegler dissolved their business and is no longer a paying TRC member. Please see the Appendix regarding their dissolution notice.
2. Johnson Controls, Inc. closed on a transaction which acquired the assets of Lux Products Corporation. Lux's remaining liabilities (including the mercury thermostat obligation) remained with a newly created company, STLPC Corporation.

---

[1] A mercury thermostat contains a variable amount of mercury ampoules or "switches" attached to the subbase of the thermostat. These glass ampoules often times are collected in the recycling container without the intact thermostat attached to them. TRC collects and counts these loose ampoules and recycles them. To derive the converted thermostat or thermostat equivalent, the program takes the following calculations to develop the converted thermostat or thermostat equivalent. First, TRC will count the total whole (intact) thermostats collected in the recycling bins. From these units, there is an intact ampoule count. TRC then takes the intact ampoules divided by the whole (intact) thermostats or otherwise known as the conversion ratio. After the conversion ratio is calculated, TRC will multiple the loose mercury switches by the conversion ratio. Lastly, we add this result to the whole (intact) thermostats to produce the converted thermostats or thermostat equivalents.

2018 Accounting of the Program Expenses

Below is a summary of program expenses for the California collection program in 2018. 2018 program expenses (reported in the annual report) are unaudited and are for management purposes only. Prior to submittal of this annual report, the expenses were reviewed by Halt, Buzas & Powell, LTD. In 2018, the program spent nationally a grand total of $3,306,769 and in California $1,551,427 (break down in chart below).

Program Component	2017	2018	Difference ($'s)

Current Collection Locations

Small Pails Expanded

In 2018, TRC shipped 320 small pails to collection points around the country. We also shipped 451 new green bins. In comparison, the program shipped 510 new green bins in 2017 and 191 small pails[2]. Collection locations either requested the new pail when they signed up to participate in the program or were switched out with the 'nudge'[3] campaign. The large, green bins which have been the staple of the program, continued to be replenished to a collection location. Because the containers are reused and bar coded, we anticipate that the request for new containers will continue to decrease as the program operates into the future.

- Of the totals provided, TRC shipped 57 NEW small pails and 140 NEW large bins in California.

Collection Location Outbound Phone Calls

Our outbound phone calls have been branded internally as the "Miss You Call" process. These calls promote collection container returns and in 2018, these calls were handled more efficiently. TRC reallocated resources for miss you calls to collection sites that have not returned a container in over a year. These calls were outsourced to two companies; Regus Property Management and Intelligent Office. By outsourcing calling, TRC has amplified its call time to 25 hours a month and increased the number of bins returned. The accumulation of these changes has netted the program an increase of 563 calls over 2017. In total, the program called 2,962 current collection locations in 2018.

- Of the totals provided, TRC completed 807 calls to encourage shipping the recycling container compared to 358 a year prior in California. A copy of the locations called can be found in the Appendix.

---

[2] New bin orders coincide with accounts that open new stores, move or lose their existing containers.

[3] Originally, the 'nudge' campaign was intended to automatically send pails to locations that returned bins with 6 or less thermostats and asking the location to consider using the pail going forward and return their large, green bin. Partway through 2018, the campaign was modified to only send pails to locations that inquired about the new container because many pails were lost or returned in the original campaign.

Collection Location Postcards

Following up the 'Miss You' call process, TRC sent well over 5,900 postcards throughout the year to collection locations that haven't shipped a bin in the past year.

- Of the totals provided, TRC mailed 1,516 reminder postcards in California. A year prior TRC sent 1,689 postcards.

Collection Location Emails

A trigger system was developed in which TRC emailed locations three weeks after receiving a postcard to encourage them to directly ship the recycling container.

- TRC emailed 693 collection locations three weeks after the location received a reminder postcard to ship their container in California.

Collection Location Site Visits

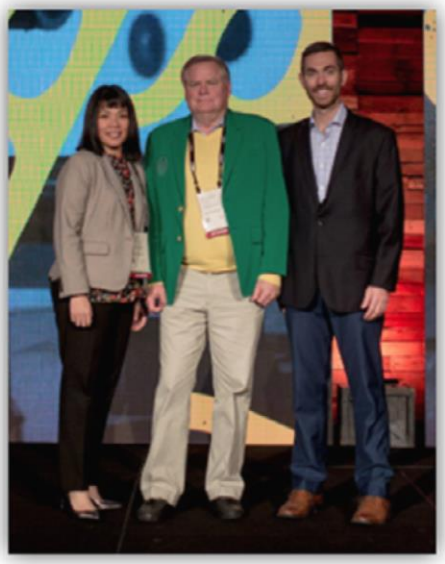
TRC completed 1,533 site visits in the following states: California, Connecticut, Illinois, Maine, Minnesota, New York, Pennsylvania, Rhode Island, and Vermont. The purpose of a site visit is to inform the location of their requirement for participation, what their specific state statute requires of them, scheduling a shipment of our recycling container, and to answer any questions they may have. Often times, valuable intel is gathered during the site visit which is used to enhance TRC's outreach and other tactics.

- Of the totals provided, TRC visited 814 collection locations compared to 757 in 2017. A copy of the sites visited can be found in the Appendix.

HVAC Industry

The HVAC industry is arguably still the best, most productive and most engaged channel for recycling mercury containing thermostats. We consider this industry to be HVACR manufacturers, wholesale distributors, and contractors which are intimately involved with the recovery of mercury thermostats. In 2018, TRC took the following actions:

- Continued the Big Man on Planet (BMOP) Competition but renamed the contest to "Banish Mercury Off the Planet".



Johnson Supply (left to right): Annie Burnett, Richard Cook, Ryan Kiscaden (TRC)

Meier Supply (left to right): Ryan Kiscaden (TRC), Dale Norton

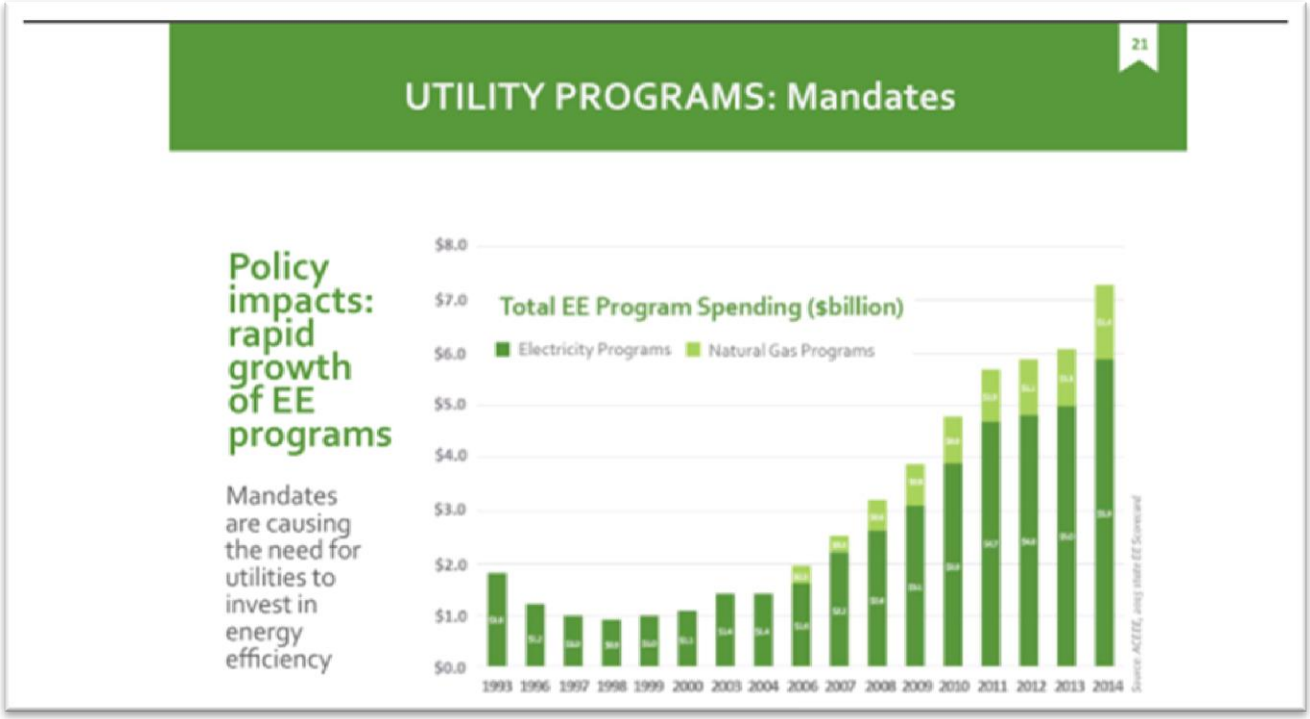
This year BMOP's top three winners were awarded green jackets, similar to the Masters Tournament.

- Pursued HVAC Educators with a direct mailing. TRC sent to 753 contacts a direct marketing letter encouraging educators to use provided materials to update their curriculum on mercury thermostats. We placed revisions to the apprenticeship and curriculum guides. Trade associations; PAHRA & ACCA worked our informational materials into presentations to the US Department of Labor. TRC's information was also added to the schools that are PAHRA accredited[4].
    - Of the totals provided, TRC sent 109 contacts in California this mailing.
- TRC followed up its exhibition at the Service World Expo with a follow-up direct mailing to attendees offering to participate in the program. TRC sent to 230 contacts a direct marketing letter encouraging participants of the Service World Expo to sign up for and use the recycling program.
    - Of the totals provided, TRC sent 133 contacts in California this mailing.
- Sent an email to all ACCA members reminding them of their responsibility to inform technicians about recycling. ACCA does not provide a breakout of its members.

[4] The committee is made up of members of AHRI manufacturers, HARDI distributors, ACCA contractors, CARE educators-instructors, RSES, PHCC contractors, CARE educators and the Association of Career & Technical Educators (ACTE).

Utility Industry

In 2018, TRC continued its refined approach engaging the utility sector, specifically targeted actions toward the utility companies themselves, the installer/implementer, and community action agencies. Each of these audiences have distinct messaging requirements and informational needs. TRC attended a utility-focused webinar which included data on the expansion of energy efficiency policies and the impacts to HVACR replacement programs. As demonstrated in the chart below (Source; DOE website), programs including energy efficiency have been expanding exponentially in recent years. It has been our experience that these programs include thermostat replacements through the use of prescriptive incentive rebate schemes or direct installation programs.



With these learnings in mind, TRC took the following actions:

1. Purchased research on energy efficiency projects geared towards thermostat replacements and rebates/incentives. The goal is to continually use the list, review program offerings and look for ways to increase awareness and direct participation in the recycling program.
2. Directly marketed to 73 community action agencies and NGO's in California.
3. Published a low-income focused article on Energy Central (invite-only blog site for utility industry participants) which has wide, national, and interactive distribution.

4. Developed marketing collateral for the paying TRC members to include in utility-based RFP's for thermostat replacement programs.

5. Interacted with the following entities during the course of travel for trade shows in which we attended, exhibiting, or spoke at.

Account Name	Description	Who we targeted/Name
Staples Energy	Provided inforamtion on the program and talked about the requirements on implementers	Nathan Baer
Navigant	Reviewed the ability to talk about a study with Pace Goodman; she would forward my contact information along	Karen Maoz
D&R International	Information for Dish installers who are targeting smart thermostats installs. Provide information on the recycling program	Stephen Bickel
Utilities	sent note to ex-EPA Leif Magnuson to meet up with him at the HPC conference	Leif Magnuson
Utilities	sent a copy of the MOU for further discussion	S. Groner
Utilities	Reached out to Leif Magnusen to talk about pay4performance and follow-up from HPC conference	Leif Magnusen
Embertec	Emailed follow-up to engage on the program regarding getting into TRM's and specifying recycling	Janice Bowman

Waste Related Sector and Household Hazardous Waste (HHW) Industry

Not unlike the utility industry, TRC spent time with the waste-related sector. These attempts were to gain new collection locations, form better relationships with the audience and raise overall awareness of the TRC program. Because of these learnings, TRC took the following actions:

- Scoured google alerts for new HHW facilities openings or events to target phone call or email outreach to encourage them to use program.

- Sent Earth911.org a copy of our collection location list for cross-promotion on their website.

Advertising and Awareness

SEO

Search Engine Optimization (SEO) is the process whereby a website is optimized through original content and on-site coding tactics so that it appears at the top of "organic searches." An organic search is one that appears "naturally" in a search engine like Google or Bing. In other words, an organic listing is not ranked through paid search.

Organic traffic to a website is more relevant. Site visitors arriving at a website are typically more engaged with such sites as measured by time spent, pages visited, return visits, etc.

Gillespie Group was engaged to expand TRC's organic search footprint. Two key measures were identified as a baseline for growth. They are: Data Cube (organic search volume multiplied by click through rate) and page-one organic terms. In January, TRC had a Data Cube score of 130 and only had 15 organic search terms ranked on page one of a Google search.

Through December of 2018, both the Data Cube and Page One Keywords have increased. The Data Cube is now at 1087 and the page-one keywords are at 104.

	Jan'18	Feb'18	Mar'18	Apr'18	May'18	Jun'18	Jul'18	Aug'18	Sep'18	Oct'18	Nov'18	Dec'18
Ranked on Page 1	15	40	41	44	50	44	64	92	111	104	77	104
Ranked on Page 2	16	13	15	28	33	30	36	53	41	42	43	34
Ranked on Page 3	28	27	47	46	53	63	62	66	76	83	69	76
Ranked on Page 4 to 10	247	228	320	408	430	419	439	528	504	480	520	557

Two main tactics were deployed to improve TRC's organic search position: Original Content and On-Site Optimization.

Original Content

TRC has added approximately ten (10) units of content to the website per month. A "unit of content" is defined as a page, a blog post, video or other content.

This content has been linked out to TRC's social platforms, providing another path for organic optimization.

On Site Optimization

TRC has focused on optimizing the site's code and structure. Currently the site is performing very well with minimal site errors and optimized meta and micro data (i.e. alt tags, title tags, meta descriptions, etc.).

Search Engine Marketing

Search Engine Marketing (also SEM or pay per click—PPC) is the process of buying a paid position on the search engine results page. TRC refined its SEM approach this year with positive results.

Behavioral Targeted Video

Behavioral targeting is a form of digital advertising where digital ads (static banner or video ads) are served up to people who, through their online search pattern and content consumption, are identified as having an affinity for certain interests or behaviors. In California, TRC deployed a behaviorally targeted video campaign that reached people in the following categories:

- Home Type/Primary Residence
- Colleges/Property Management
- Green Living Network Renewable Energy/Office Mgmt./Utilities
- HVAC/Construction/Maintenance

The campaign delivered the following results:

Advertising Research

TRC commissioned a study to evaluate the pre and post awareness of the recycling program throughout the state as impacted by the advertising efforts. Highlights are as follows:

- Awareness increased only by 3% after the ad campaign.
- 64% of those surveyed are aware that some thermostats contain mercury. (No change after advertising)
- 51% of those surveyed know how to properly dispose of mercury. (Up 2%)
- 16% of those surveyed recalled seeing a TRC ad.

Note: The margin of error was +/- 4% so results noted above are negligible as they are well within the margin of error.

FAMILY AND SAFETY FIRST!

Customer safety and environmental stewardship is increasingly important for today's utility company. That's why we've partnered with dozens of utility providers throughout the nation to ensure that mercury thermostats are safely collected and properly disposed. Mercury is a human health hazzard if it is not disposed of properly. It contaminates the environment and will harm others and wildlife. With the help of utility companies, and thousands of other national partners, we've collected over 2.1 million tons of mercury since 2007.

WEATHERIZATION AND GRANTS THROUGH GOVERNMENT AGENCIES

The sales, installation, and disposal of mercury containing thermostats may have been banned in the state that you have received Weatherization Assistance Program (WAP) grants from the Department of Energy. It is important to consider your obligations in informing others and managing the proper recycling of these devices during weatherization projects focused on energy efficiency. There is a strong likelihood that HVAC/r systems (furnaces, boilers, and heat pumps) are still controlled by non-programmable, non-digital, mercury-containing thermostats. It is also likely that these devices are still in operation within the residences that your programs target. Because of this, you should consider the following recommendations.

Participate directly in the TRC program or require the technicians administering the weatherization grants to do so and update your field guides with information related to mercury thermostat regulations. The National Renewable Energy Laboratory (NREL) has listed under the Standard Work Specifications (SWS) tool via its website, information related to mercury thermostat assessment and handling. The standard 5.3104.1b Controls – Thermostat Replacement describes details on how to handle thermostats containing mercury. It is important that sub-grantee recipients know that workers and occupants can and will be protected from improper disposal or handling of these devices. The custody of control is limited to universal waste generators. But, the moral obligation to communicate responsibilities to hired technicians remains within your control.

OUR BINS AND PAILS

Thermostat Recycling Corporation works with retail partners, wholesale companies and municipalities. We provide large and small collection bins. TRC handles the collection and replacement of our bins.

2018 Consent Order Activities

On February 10, 2016, the Department of Toxic Substances Control (DTSC) and 25 manufacturers who are members of the TRC came to an agreement to improve out-of-service mercury-added thermostat collections in California by entering into a Consent Order[5]. The 25 manufacturers represented by TRC who had entered into the Consent Order were as follows: Bard Manufacturing Company, Inc., Burnham Holdings, Inc., Carrier Corporation, Chromalox, Crane, Climate Master, Inc., Empire Comfort Systems, General Electric Company, Honeywell International Inc, Hunter Fan Company, Invensys, Inc., ITT Corporation, Johnson Controls, Lear Siegler, Lennox International Inc., Lux Products Corporation, The Marley-Wylain Company, Nortek Global HVAC LLC, Sears Holdings, Thomas & Betts Corporation, Trane Residential Systems, Uponor, Inc., Valliant Corporation, W.W. Grainger, Inc., and White-Rodgers.

The Consent Order required the manufacturers to develop an outreach plan and pilot projects plan to increase awareness and incentivize safe disposal of mercury-added thermostats. Four of TRC's members (E.g. Daikin Applied/McQuay International, Goodman Global, Inc., Rheem Manufacturing Company, and TPI Corporation) did not sign onto the order, and a fifth member (PSG Controls, Inc.) went out of business. In 2018, one of the 25 companies, Lear Siegler dissolved their corporation.

In the interest of fulfilling the requirements of the Consent Order and in conjunction with Stephen Groner Associates, TRC worked with DTSC to develop an outreach and pilot plan to heighten collections in the state of California. Once the consent order was active and each plan approved by DTSC, TRC has submitted a total of ten quarterly reports. A copy of each quarterly report can be reviewed on our website at https://www.thermostat-recycle.org/resources/media_center/. Instead of using the annual report to summarize each activity by audience, TRC respectfully points DTSC to review the quarterly reports submitted which contain detailed information about the activities and results stemming from the consent order.

2019 Program Modifications

Thermostat Recycling Corporation's 2019 Goals

TRC continues to set high-level annual goals for the organization. These goals assist in decision making and prioritization of activities. For the calendar year of 2019, TRC plans to focus on:

1. Targeting mercury thermostat collections at Utilities. Maintain the HVAC industry collections. Other key audiences vary by requirements.
2. Focusing on education and awareness tactics geared toward tech schools, post-secondary and technical reference manuals placements.

Thermostat Recycling Corporation's Planned Tasks

In addition to the above goals, TRC will set specific tasks to focus on. Completion of these tasks' aid in the overall organization's goals.

1. Look for opportunities to switch existing collection points to small pails.
2. Audit our processing facility for efficiency gains and consistent recycling container lead times.
3. Attend and integrate learnings from other EPR products after quarterly Executive Director in-person meetings.
4. Roll-out public releases throughout the year (blogs, press releases, and articles).
5. Continue the program's operational activities such as outbound phone calls, mailing reminder postcards, and visiting sites. Use collection data trends and available tools to target these initiatives.
6. Attend the list of 2019 events such as trade shows and conferences. Look for speaking opportunities at attended events.

HOW MERCURY THERMOSTAT WASTE IS HANDLED

WASTE MERCURY-ADDED THERMOSTAT MANAGEMENT THROUGH VEOLIA ES TECHNICAL SOLUTIONS, LLC.

Beginning December 19, 2016, bins with waste mercury-switch thermostats were received at a new fulfillment/inventory center in Port Washington, Wisconsin (WIR000130591). The facility is owned and operated by Veolia ES Technical Solutions, L.L.C. (Veolia) under contract with TRC.

All recycling containers, including pails and bins are received at the loading dock and sent to the TRC inventory area. The bin and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The containers are returned to the location that sent it in with a new prepaid address label within 72 hours of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The thermostats and any loose bulb collected from the bins are consolidated into a special 55-gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are captured and vented when the drum is opened.

The 55-gallon drum is then shipped to Veolia's mercury recovery facility (WID988566543) for final processing of the mercury ampoules (switches) Veolia Environmental Services meets or exceeds all local, state, federal and EPA regulations for the management of the product.

The containers are returned from the storage area to the mercury recovery processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the recycling and disposal of waste within 12 months of acceptance at the processing facility.

Small quantities of thermostats are removed from the container, which is then closed again, a spillage. The bulbs are removed from the thermostats and placed into processing vessel at the work station. Once the processing vessel is full, the vessel is loaded into the mercury recovery retort oven.

If a bulb breaks and the mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. The TRC inventory

and processing areas are equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to assure that any spillage is cleaned up and not left to evaporate.

Veolia meets or exceeds all local, state, federal and EPA regulations for the management of the product. The mercury recovery facility and process are permitted by the Wisconsin Department of Natural Resources. Veolia's approvals for mercury recovery/recycling include:

- EPA - identification WID988566543
- Hazardous Waste Storage License #6008
- Hazardous Waste Treatment License (Mercury Recovery Operations) #4585
- Air Operation Permit #246076050-S01
- Storm Water General Permit #WI-S067857-4

In addition to the regulatory permits, both Veolia Port Washington facilities have developed and maintains management systems in accordance with ISO 14001-2004, OHSAS 18001-2007, and Responsible Recycling (R2:2013) Practice. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

The mercury containing ampules are retorted at Veolia's Port Washington Mineral Springs facility. The mercury is removed during the retort process. The post retort debris consists of broken glass ampules. The debris is tested for residual mercury to document the removal of the mercury to levels below the US EPA Land Disposal Restriction (LDR) levels. The debris is then disposal of as a non-hazardous solid waste at Advanced Disposal Glacier Ridge Landfill, LLC in Horicon, Wisconsin.

A site evaluation of the Veolia Processing Center in Port Washington, WI was conducted by TRC staffer, Danielle Myers, in early October 2017. From this audit, a new design flow for processing bins was discovered, as well as more efficient ways to return bins back to participating facilities and contractors. Updates to packaging instructions were also a result, and will include new marketing collateral, incentives, and small pails.
