WE SHARE THE GOOD NEWS – 2019 WAS ANOTHER POSITIVE YEAR

As the 2019 annual reports are being written, it is important to reflect on how much activity the program encompassed in the last year. The program continued to work in new and interesting ways to keep collecting mercury-containing thermostats. We began to streamline our vendors in the process of relocating our headquarters to New York, NY. TRC remains a nimble organization focused on finding and recycling every mercury thermostat every time.

Data shows that the replacement of HVACR equipment continues to be the leading channel for mercury thermostat replacement. The accelerated adoption of “smart-home” controls and the array of utility programs which encourage early thermostat replacements have also been major drivers of collections. Looking ahead, TRC anticipates that the program will continue to fulfill state statutory requirements, agreements and other arrangements for regulatory and legislative compliance. But we will continue to target mercury thermostat collections at utility energy efficiency programs while simultaneously maintaining the HVAC industry collections. TRC will continue to work with its partners in industry, the energy sector and the regulatory community to achieve positive results.

TRC MARKETING

The message around the importance of properly disposing of mercury-containing devices is really a familiar message, and it’s hard to keep a familiar message fresh. Our goal is to maintain awareness of the issue without becoming “white” noise, which is the challenge any recycler faces. This will be accomplished through innovative marketing and creative delivery platforms.

In the energy space, TRC continues to engage the utility stakeholders on the importance of collecting mercury-containing thermostats while developing, deploying and incentivizing thermostat replacement programs. Our efforts continue to demonstrate our intent and commitment while offering suggestions related to future incentive practices.

This year we continued to utilize our Tableau software for enhanced and immediate updates on our results. More and more we are expanding the use of technology and social media to raise TRC’s profile on digital platforms in a continued effort to raise awareness of the need to properly collect and dispose of mercury-containing thermostats.

KEY ALLIANCES

For a program such as TRC's to be successful year after year requires the coordinated effort of many parties. TRC is fortunate to have exceptional support from its industry members, collection partners, marketers, allied industries, regulatory agencies and staff. These strategic partnerships allow TRC's effectiveness to grow as it continues to move forward successfully in the collection and disposal of mercury-containing thermostats.

We are happy to provide you with this year's annual report. Please do not hesitate to contact us with comments or questions.

A handwritten signature in black ink, appearing to read 'Ralph Vasami', written over a thin horizontal line.

Ralph Vasami
Executive Director

CONNECTICUT

2019 Collections by Brand

In Connecticut, Thermostat Recycling Corporation (TRC) recovered the equivalent of 2,615 mercury thermostats from 1,694 whole mercury thermostats plus 1,208 mercury switches removed from thermostats. A total of 20.9 pounds of mercury was diverted from solid waste. *Please note the explanation of the converted thermostats or thermostat equivalents below.¹ An example of the mercury ampoule is shown below.

As required by the state statute, a table of thermostat brand holders with the corresponding thermostats, count of switches and pounds of mercury recycled is below. It is important to note that there still remain non-members whose thermostats the TRC collection program recycles. They are listed in the table as “Non-Member Brands”. Also, there was a change that affected TRC’s membership.

1. Sears Holdings filed for bankruptcy on October 15, 2018 and is no longer a paying TRC member.

¹ A mercury thermostat contains a variable amount of mercury ampoules or “switches” attached to the subbase of the thermostat. These glass ampoules often times are collected in the recycling container without the intact thermostat attached to them. TRC collects and counts these loose ampoules and recycles them. To derive the converted thermostat or thermostat equivalent, the program takes the following calculations to develop the converted thermostat or thermostat equivalent. First, TRC will count the total whole (intact) thermostats collected in the recycling bins. From these units, there is an intact ampoules count. TRC then takes the intact ampoules divided by the whole (intact) thermostats or otherwise known as the conversion ratio. After the conversion ratio is calculated, TRC will multiple the loose mercury switches by the conversion ratio. Lastly, we add this result to the whole (intact) thermostats to produce the converted thermostats or thermostat equivalents.

Brand Holder	Thermostats	Count Switches	Pounds Mercury

2019 Accounting of the Program Expenses

Below is a summary of program expenses for the Connecticut collection program in 2019. 2019 program expenses (reported in the annual report) are unaudited and are for management purposes only. Prior to submittal of this annual report, the expenses were reviewed by Kellen Company.

Program Component	2018	2019	Difference
Direct Expense for Marketing & Outreach	\$ 10,465.00	\$ 8,393.49	\$ (2,071.51)
Incentive/Promotional Payments	\$ -	\$ -	\$ -
Legal	\$ 28,629.00	\$ -	\$ (28,629.00)
New Collection Containers	\$ -	\$ -	\$ -
Recycling Costs	\$ 14,661.00	\$ 9,785.51	\$ (4,875.49)
Travel	\$ -	\$ -	\$ -
TRC Staff & Administration	\$ 15,262.00	\$ 14,780.54	\$ (481.46)
Total Expenses	\$ 69,017.00	\$ 32,959.54	\$ (36,057.46)

2019 Education and Outreach

Direct Marketing (Email, Mail, Other Communications)

Current Collection Locations

Small Pails and Green Bins

In 2019, TRC shipped 55 small pails to collection points around the country. We also shipped 291 new green bins. In comparison, the program shipped 451 new green bins in 2018 and 320 small pails². Collection locations either requested the new pail when they signed up to participate in the program or chose to switch out their bin with a pail due to decreased collections. The large green bins which have been the staple of the program continued to be replenished as they were returned for processing. Because the containers are reused and bar coded, we anticipate that the request for new containers will continue to decrease as the program operates.

- Of the totals provided, TRC shipped one new small pail and 14 new large bins in the state.

Collection Location Outbound Phone Calls

Our outbound phone calls have been branded internally as the “Miss You Call” process. These calls promote collection container returns and offer as a reminder to locations that have not received any thermostats. TRC allocates these miss you calls to collection sites that have not returned a container in over a year. These calls are outsourced to the Regus Property Management representatives and Intelligent Office. These calls also serve as a friendly customer service check to see if any of the program materials need to be replenished or if missing containers need to be replaced. In total, the program called 3,557 current collection locations in 2019.

- Completed 193 calls to encourage shipping the recycling container compared to 198 a year prior. A copy of the sites called can be found in the Appendix.

Collection Location Postcards

TRC updated the reminder postcard design in 2019 to encourage locations to heed the message. The postcards are sent to all locations that have not returned a container in the past year. In 2019, TRC

² New bin orders coincide with accounts that open new stores, move or lose their existing containers.

mailed 14,145 postcards. By updating the look of these postcards, TRC hopes to engage locations that were used to the old design and may have disregarded it in the past.

- Mailed 383 reminder postcards compared to 382 a year prior.

Collection Location Emails

TRC emailed locations three weeks after receiving a postcard to encourage them to directly ship the recycling container. These emails contain step-by-step instructions for shipping and direct contact information for missing shipping labels or further questions.

- Emailed 70 collection locations three weeks after receiving the reminder postcard to ship their container.

Collection Location Site Visits

Throughout the year, 1,797 site visits were completed in numerous states. The purpose of site visits is to inform the location of their requirements in participation, what the statute requires of them, shipment of the recycling container, and to answer any questions they may have. Often times, valuable information is gathered during the site visit which is used to enhance TRC's outreach and update the database with current contact details.

- Visited 50 collection locations compared to 51 in 2018. A copy of the sites visited can be found in the Appendix.

HVAC Industry

The HVAC industry is arguably still the best, most productive and most engaged channel for recycling mercury containing thermostats. We consider this industry to be the manufacturers, wholesale distributors, and contractors which are intimately involved with the recovery of mercury thermostats. TRC took the following actions:

- Continued the “Banish Mercury Off the Planet” (BMOP) Competition encouraging all HARDI wholesalers to compete through collections. Included direct marketing to 258 HVAC wholesale headquarter locations.

- HVAC Educators direct marketing. We sent 691 emails encouraging educators to use materials provided by TRC to update their curriculum on mercury thermostats. TRC created new collateral directly targeted at HVAC technicians in training. These brochures were made available to institutions and trade schools for current and interested HVAC students.

FAQs

TRC is a non-profit corporation voluntarily founded by thermostat manufacturers for the purpose of promoting and facilitating the collection and proper disposal of mercury thermostats. TRC now represents 31 manufacturers that historically distributed mercury-containing thermostats in the US.

- What is the purpose of the program?**
The goal of the program is to recycle all mercury-containing thermostats that are taken out of use.
- I'm an HVAC contracting business. Can I direct ship waste mercury thermostats to TRC?**
Yes, HVAC contracting businesses are eligible to participate in the program. Use TRC's "Contractor" order form to sign your business up today.
- What thermostats can be recycled?**
The program accepts all brands of wall-mount mercury-containing thermostats. The thermostat must be whole and not leaking. TRC no longer requires the thermostat cover. Examples of mercury-containing thermostats can be found on our website. TRC does not collect other mercury-containing products.
- What should I do?**
Whenever you replace a mercury-containing thermostat, keep the old one and return it to a participating TRC collection site. Visit thermostatrecycle.org to find a collection site near you.

About Our Company

The Thermostat Recycling Corporation (TRC) is a non-profit (501(c)(3)) stewardship organization that facilitates and manages the collection and proper disposal of mercury-containing thermostats.

HVAC Technicians: Don't forget to... Recycle THIS.

Mercury & HVAC

As an HVAC technician, you may encounter a mercury thermostat when replacing or repairing a system in an older home/building. It is important to know the proper removal and disposal of a mercury-containing thermostat as to not endanger yourself or others. Numerous states require HVAC contractors to recycle mercury-containing thermostats, as they are the individual removing it from the wall. Failure to do so could result in a fine.

Mercury

Mercury is a bio toxin commonly found in older thermostats, among many other items. Mercury was used in thermostats to control home and commercial building temperatures until 2007. However, this does not mean all mercury thermostats have been replaced.

TRC

Luckily for you, Thermostat Recycling Corporation (TRC) will gladly help you recycle old mercury-containing thermostats. TRC is a non-profit organization founded in 1998 by thermostat manufacturers Honeywell, White-Rodgers and General Electric to promote the safe and proper collection/disposal of old mercury thermostats. We provide bins and pallets to collect thermostats and will help you find the nearest collection site to drop them off at for free.

The Law

At this time, the sale of mercury-containing thermostats is banned. Many states have since banned throwing any mercury-containing thermostat in the trash, and enacted laws to dispose of the thermostat properly. Many states have outright disposal bans and more restrictive requirements.

How to Tell If A Thermostat Contains Mercury

If the thermostat has a lever or dial, chances are it contains mercury. Look for the mercury switch and be sure to properly recycle the thermostat.

Safely Remove and Dispose

Once you've identified whether the thermostat contains mercury, make sure the power to it is out off. Remove and save the thermostat's cover. Loosen the contact screws while holding the thermostat to the sub-base. Remove from the sub-base. Place the cover back on the thermostat to protect the mercury bulb. Remove the sub-base from the wall. Place in a TRC designated thermostat recycling bin at a collection site found on our website.

Utility Industry

In 2019, TRC continued its refined approach on how to engage the utility sector, specifically targeting actions toward the utility companies themselves, the installer/implementer, and community action agencies. Each of these audiences have distinct messaging requirements and informational needs.

- Completed year-long research project targeting state TRMs for utility programs, focusing on environmental benefits and inclusion of thermostat recycling.
 - TRC plans to use these findings in 2020 to target individual utility programs.

- Sent 614 informational emails on thermostat recycling to the DOE weatherization program.
- Sent 437 informational emails to known utility implementers on the program.
- Released article urging utility organizations to participate in program and emphasized inclusive sustainability messaging.

Waste Related Sector and Household Hazardous Waste (HHW) Industry

The waste-related sector remains an important sector for TRC to target individuals and those residents performing DIY thermostat installations. These attempts were to gain new collection locations, form better relationships with the audience and raise overall awareness of the TRC program. As a result of these learnings, TRC took the following actions:

- Scoured google alerts for new HHW facilities openings or events to target phone call or email outreach to encourage them to use program. Sent 62 emails.
- Continued partnering with Earth911 and provided collection location list for cross-pollinating.
- Exhibited at the national North American Hazardous Materials Management Association (NAHMMA) Conference.

Advertising and Awareness

Website

In 2019, TRC worked on expanding its website content. As a result, throughout the year TRC posted “Short Snippets” relating to waste and sustainability in the typical consumer’s life. Listed here are the pieces added to our website for visitor’s enjoyment this year.

Search Engine Marketing (SEM)

Search Engine Marketing (also SEM or pay per click—PPC) is the process of buying a paid position on the search engine results page. TRC refined its SEM approach this year with positive results, with a 20% increase in clicks, a 33% increase in impressions and a 22% increase in conversions, according to

Google Adwords Reporting.

Search Engine Optimization (SEO)

Search Engine Optimization (SEO) is the process whereby a website is optimized through original content and on-site coding tactics to increase its chances of appearing near the top of “organic searches.” An organic search is one that appears “naturally” in a search engine like Google or Bing. In other words, an organic listing is not ranked through paid search.

Organic traffic to a website typically brings visitors who stay longer, and visit more pages, on average. Two key measures were identified as a baseline for growth. They are:

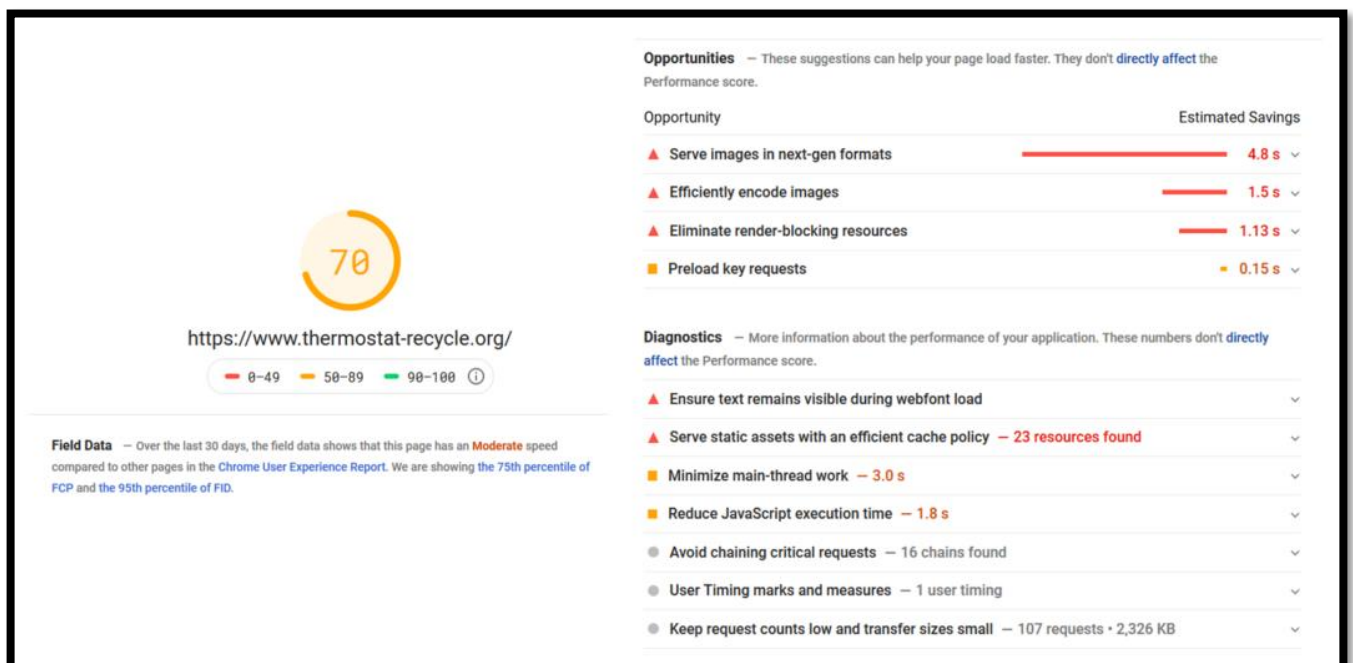

- Clicks from Search (Organic search volume multiplied by click through rate)
- Page-one organic terms.

In December 2018, TRC had Clicks from Search of 1,087 and 104 organic search terms ranked on page one of a Google search. Through December of 2019, both the Clicks from Search and Page One Keywords have increased. The Clicks from Search is now at 6,427 and the page-one keywords are at 334, according to the ***Google Search Console.***

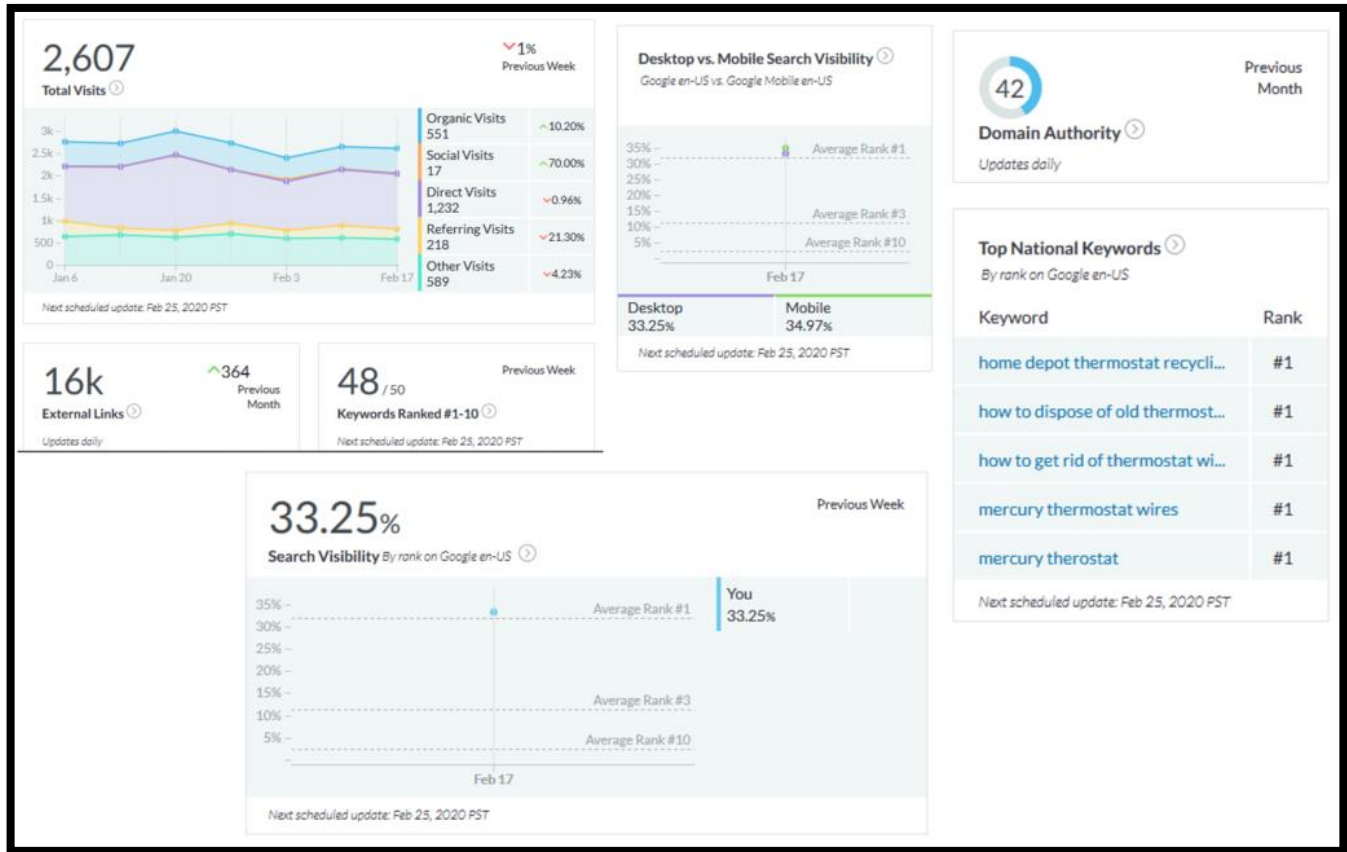

On Site Optimization

TRC has continued to focus on optimizing the site's code and structure. Site performance as measured by **Google Page Speed Insights** shows the site at a score of 70 out of 100. Google favors sites that deliver content quickly, so speed is important.

A **MOZ Pro Site Audit** was also conducted to determine key metrics for SEO.

2019 Trade Shows, Conferences, and Presentations

2020 Program Modifications

Thermostat Recycling Corporation's 2020 Goals

TRC continues to set high-level annual goals for the organization. These goals assist in decision making and prioritization of activities. For the calendar year 2020, TRC plans to focus on:

- Continuing to fulfill state statutory requirements, agreements and other arrangements for regulatory compliance.
- Targeting mercury thermostat collections at Utilities. Maintain the HVAC industry collections. Other key audiences vary by state and requirements.
- Focusing on education and awareness tactics geared toward tech schools, post-secondary and technical reference manuals.

Thermostat Recycling Corporation's Planned Tasks

In addition to the above goals, TRC set specific tasks which we plan to focus on. Completion of these tasks aid in the overall organization's goals.

- Attend and integrate learnings from other EPR products after the biannual Product Stewardship in-person meetings.
- Roll-out public releases throughout the year.
- Continue the program's operational activities such as outbound phone calls, mailing reminder postcards, and visiting sites. Use collection data trends to target these initiatives.
- Attend the list of 2020 events such as trade shows and conferences³. Look for speaking opportunities at attended events.

Date	Show	Location
February		
3rd-5th	AHR Expo	Orlando, FL

2019 CT MERCURY THERMOSTAT COLLECTION AND RECYCLING

March 2020

Thermostat Recycling Corporation's Collection Program in Connecticut

Mercury in the environment can have many deleterious effects when it enters waterway systems, causing genetic and developmental issues in wildlife, and immune and nervous system damage in humans. Products such as thermostats hold a relatively small quantity of metallic mercury encapsulated in a glass bulb, and if the enclosure is compromised, the contents may be released into the environment where microbes can convert this mercury into highly toxic organometallic compounds such as methyl mercury posing a threat to the environment. While the predominant sources of mercury include coal-burning power plants and gold mining, mercury pollution can also be attributed to improper disposal of mercury containing products thermometers, switches, certain types of light bulbs - including fluorescents - and older types of thermostats.

In response to this concern, major thermostat manufacturers created and funded the Thermostat Recycling Corporation (TRC) in 1998, and the organization now has takeback participants in 48 states, including 17 state programs that have imposed regulations on the sale and / or disposal of these thermostats. The Thermostat Recycling Corporation works on behalf of thermostat manufacturers to provide sufficient and convenient return channels for older mercury-containing thermostats to prevent these products from ending up in disposal facilities such as landfills and incinerators. In addition, many states have implemented sales restrictions, disposal bans and product stewardship statutes for products containing mercury to prevent mercury from entering the environment. Connecticut has recently joined a growing list of states that require thermostat manufacturers to ensure a disposal alternative for thermostats through implementation of a convenient take-back program.

The goal of this report is to provide for the Connecticut Department of Energy and Environmental Protection an evaluation of the TRC's effectiveness in meeting the goals and requirements of the take-back program it conducts in Connecticut under Connecticut Public

Act No. 12-54. Included in this report is a summary of the program's current operations, including its access to return channels and the characteristics of those channels, and how they are marketed and publicized. Resource Recycling Systems (RRS) has prepared this report as an independent third party to quantify and assess the effectiveness of the TRC program in meeting its obligations to provide a convenient return channel for diverting and capturing thermostats removed from service.

Methodology

Bin and thermostat receipts from 2019 were used to determine the collection performance of the TRC collection program in Connecticut, and this data was used in conjunction with historical program performance data including bin and thermostat submission data across Connecticut and all other states where TRC has operated collection programs. The calculation of program results based on this data was analyzed both for technical accuracy as well as for measuring program performance.

Connecticut Program Performance

The Thermostat Recycling Corporation (TRC) is a non-profit stewardship organization that facilitates and manages the collection and proper disposal of mercury-containing thermostats. TRC is supported by 30 manufacturers and provides a network of collection sites around the United States with the aim of keeping mercury out of the waste stream and protecting the environment. The following analytical report details the annual program performance for mercury thermostat collection in the state of Connecticut (CT) in 2019. A few of the program highlights for 2019 are included below:

- In 2019, the program **collected 20.9 lb of mercury** in Connecticut. Since 2008, mercury collected in the state has increased by an annual average of 25% per year. During the same period, the total mercury collected in the nation increased by 3% per year.
- The program collected **1,694 whole thermostats in 2019**, 6% more than the number collected at original implementation of Connecticut Public Act No. 12-54 in 2013. The number of thermostats collected annually in CT has increased by an annual average of 2% since 2008.
- The number of **whole thermostats collected per bin in 2019 on average was 31 thermostats**, fewer than the 34 thermostats/bin collected in 2018. This metric has been trending downward in CT and nationally.
- Counties returning the most bins and thermostats in 2019 were **New Haven (14 bins, 631 thermostats)** and **Hartford (17 bins, 496 thermostats)**, followed by **Fairfield (9 bins, 268 thermostats)** and **New London (6 bins, 250 thermostats)**.
- In 2019, **24% of active partner locations returned at least one bin** compared to a national average of 31%.
- In 2019, a total of **50 site visits were conducted in Connecticut, and 193 'Miss You' calls were placed to channel partners to prompt bin returns**. Bin returns appear to be correlated to site visits, which were down by approximately a third.

- In addition to 1,694 whole thermostats, **1,208 loose switches were collected**, bringing the total **number of “thermostat equivalents” returned in 2019 to 2,615**, a 30% decrease from 2018.

SECTION 1: Program Analytics

Section 1 of this report examines the annual performance of the thermostat collection recycling program in terms of bins, thermostats, and mercury collected as well as the year-over-year progression of the program.

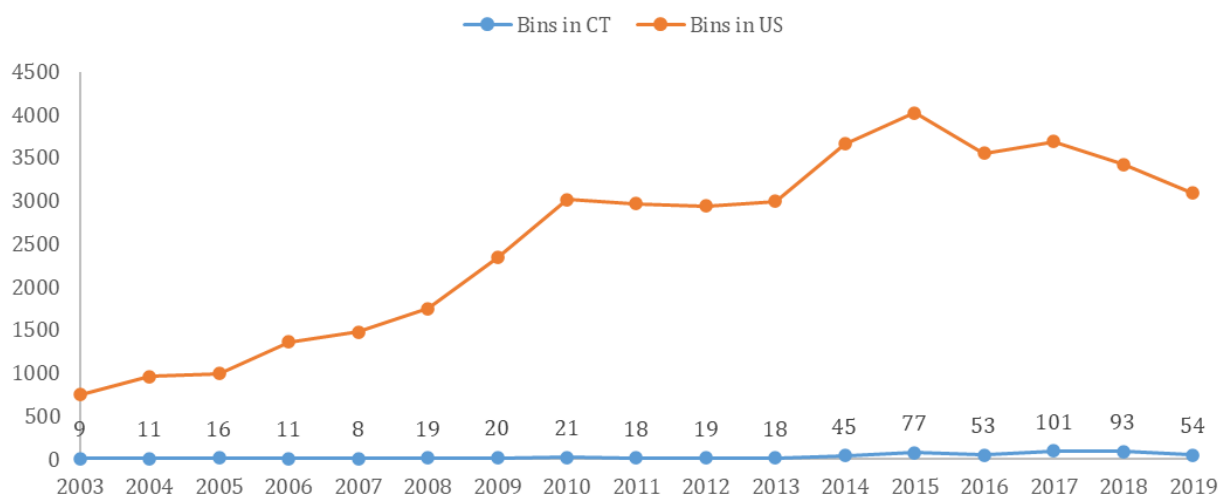

On average, the program has **collected 16.6 lb of mercury** and **1,768 thermostats per year** since 2001. In 2019, the program **collected 20.9 lb of mercury from 1,694 whole thermostats and 1,208 loose switches**. Figure 1.1 displays the total number of bins, thermostats, and quantity of mercury collected in Connecticut since the beginning of the program.

FIGURE 1.1: PROGRAM PERFORMANCE OVER TIME

Year	Number Bins	Number Stats	Lb Mercury
2001	3	305	2.5
2002	2	224	1.5
2003	9	901	6.4
2004	11	909	6.9
2005	16	1,309	13.3
2006	11	972	8.0
2007	8	839	7.4
2008	19	1,838	17.8
2009	20	2,109	22.4
2010	21	1,918	16.2
2011	18	1,538	14.2
2012	19	1,831	15.4
2013	18	1,600	12.9
2014	45	2,485	24.0
2015	77	3,395	30.0
2016	53	2,284	22.2
2017	101	4,246	45.6
2018	93	3,203	27.5
2019	54	1,694	20.9
Average	31	1,768	16.6
Total	598	33,600	314.9

Figure 1.2 displays the number of bins collected in Connecticut over time as well as the total number of bins collected nationally over the same period. Annual bin collections trended upwards from 2001 to 2010, then again in 2014-15, the first full year after the mandatory program was implemented. The number of bins collected again increased in 2017 to the highest amount submitted in a year at 101 bins, followed by a small decline in 2018 and only 54 bins in 2019, 42% fewer than the 93 bins returned the previous year.

FIGURE 1.2: BINS COLLECTED OVER TIME IN THE STATE AND NATIONALLY

Since 2008, the average of annual increases in mercury collected has been 21% in Connecticut. During the same period, the percentage increases in quantity of mercury collected nationally averaged 3% per year. **In 2019, the quantity of mercury collected decreased by 24%** relative to 2018, with **20.9 lb mercury collected**. Figure 1.3 displays the total quantity of mercury collected in Connecticut over time as well as the annual percent increase (or decrease) in Connecticut and nationally since 2008.

FIGURE 1.3: QUANTITY OF MERCURY COLLECTED IN PROGRAM AND ANNUAL CHANGES IN STATE AND U.S.

Year	Total Lb Hg	% Change State	% Change U.S.
2001	2.5	N/A	89%
2002	1.5	-39%	14%
2003	6.4	328%	11%
2004	6.9	7%	17%
2005	13.3	93%	11%
2006	8.0	-40%	32%
2007	7.4	-7%	2%
2008	17.8	141%	16%
2009	22.4	25%	16%
2010	16.2	-27%	26%
2011	14.2	-13%	4%
2012	15.4	9%	-5%
2013	12.9	-17%	-5%
2014	24.0	87%	13%
2015	30.0	25%	13%
2016	22.2	-26%	-15%
2017	45.6	105%	-7%
2018	27.5	-40%	-13%
2019	20.9	-24%	2%
Average Since 2008	22.4	21%	3%

Channel partners in Connecticut returned 1,694 thermostats to TRC in 2019. This represents an **47% decrease from 2018**. The average of annual increases in thermostats collected in Connecticut is **15% since 2008**. Yearly increase rates for the U.S. averaged 2% over the same period. Figure 1.4 displays the total number of thermostats collected in Connecticut and nationally.

FIGURE 1.4: NUMBER OF WHOLE THERMOSTATS COLLECTED OVER TIME IN THE STATE AND NATIONALLY

Figure 1.5 shares the underlying data as well as the average of annual percent changes calculated since 2008.

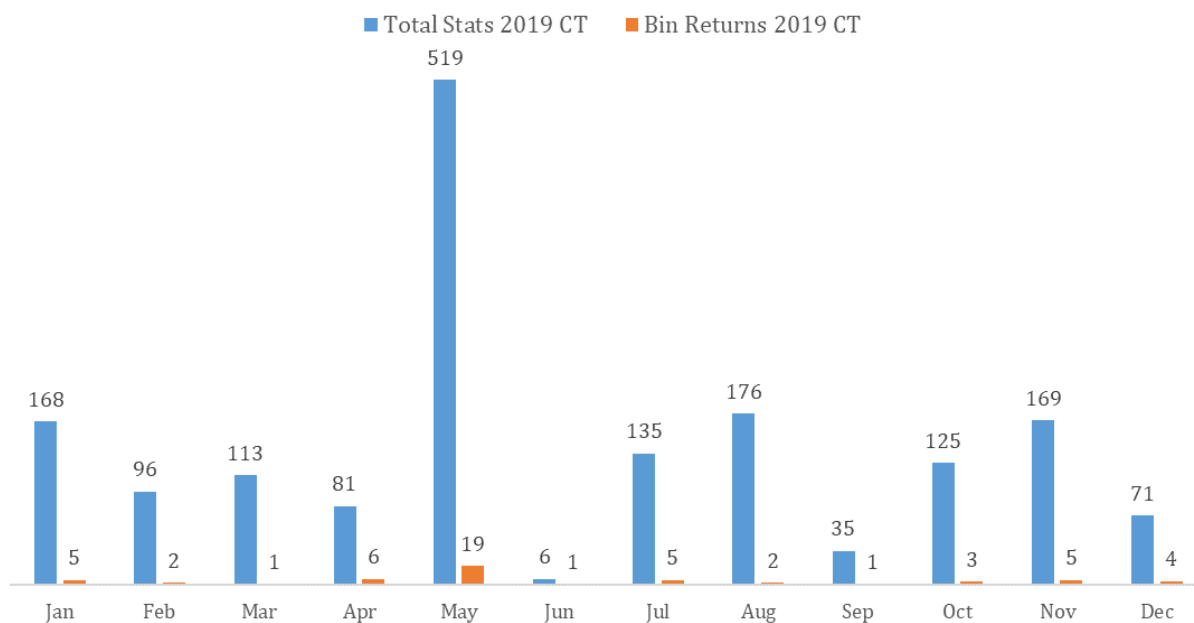

FIGURE 1.5: WHOLE THERMOSTATS COLLECTED IN CT AND U.S. OVER TIME

Year	T-stats in CT	T-stats in U.S.	% Change State	% Change U.S.
2001	305	48,350	-	-
2002	224	61,422	-27%	27%
2003	901	65,778	302%	7%

Average*	2,345	171,799	15%	2%

*Since 2008

Figure 1.6 displays the monthly distribution of bins and thermostats returned in Connecticut over 2019. The months with the greatest number of bins returned were **May (19 bins)** and **April (6 bins)**. The months with the greatest number of thermostats returned were in **May (519 thermostats)**, **August (176 thermostats)** and **November (169 thermostats)**. June and September represented the lowest activity levels in terms of bin returns and thermostats.

FIGURE 1.6: WHOLE THERMOSTATS AND BINS COLLECTED PER MONTH IN 2019

The highest number of thermostats per bin was in **March (113 thermostats per bin)**, followed by **August (88 thermostats per bin)**. Figure 1.7 shows the average number of thermostats per returned bin per month for the year.

FIGURE 1.7: AVERAGE THERMOSTATS PER BIN RETURNED PER MONTH

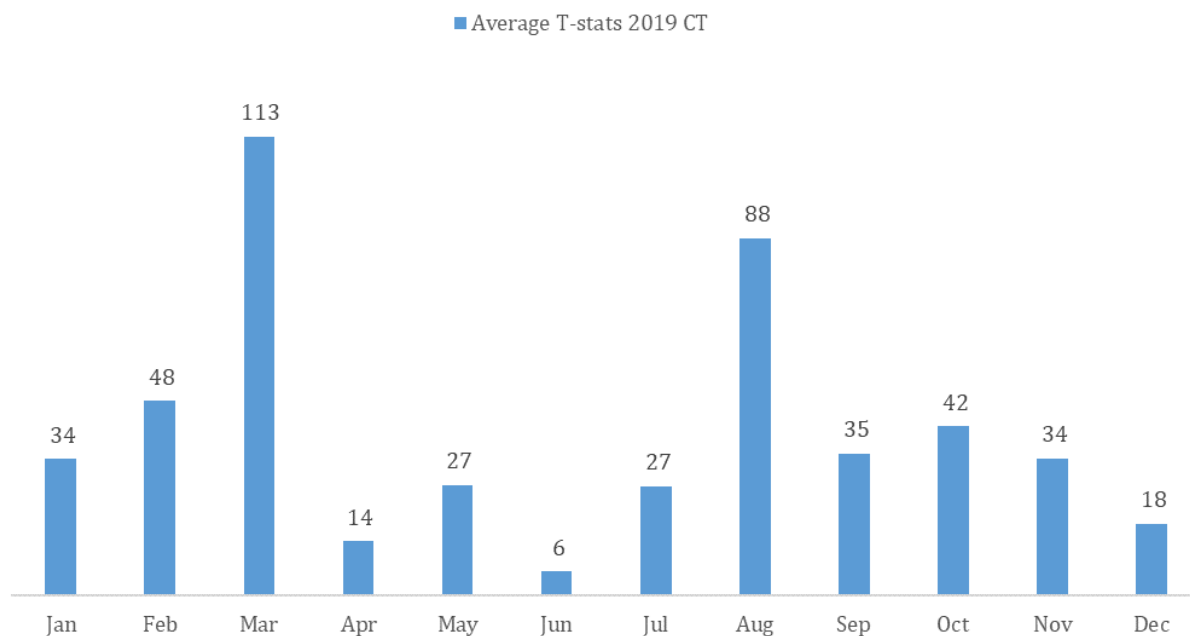

Figure 1.8 displays the average number of thermostats returned per bin in the state and U.S. since 2003 in Connecticut. Nationally, the number of thermostats collected per returned bin has been generally trended lower in more recent years, with an unusual reversal in that trend in 2019. From 2001 until 2013, the average number of thermostats per bin collected in Connecticut was greater than the national average, with exceptions in 2004 and 2005. In 2014, the average returned bin contained fewer thermostats than the national average, and the trend continued through 2019.

FIGURE 1.8: AVERAGE THERMOSTATS PER BIN OVER TIME IN CT AND NATIONALLY

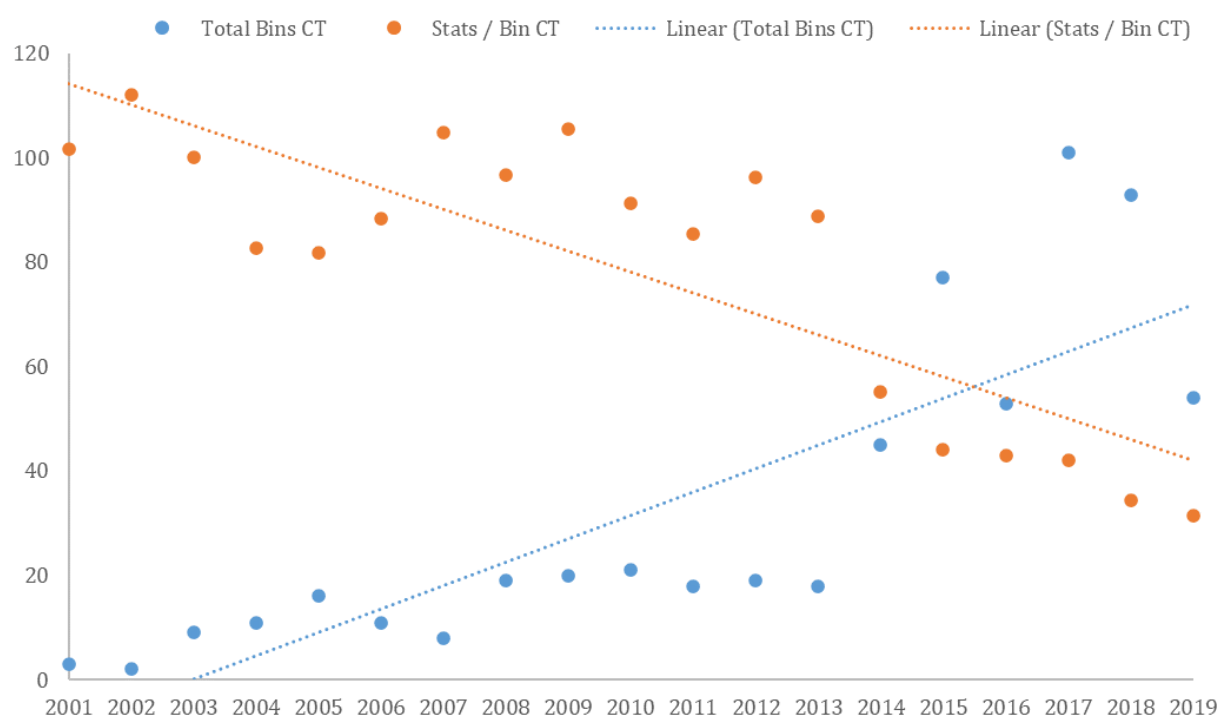

Figure 1.9 plots the total bins returned over time along with the average number of thermostats per bin over the same period to illustrate the relationship between the two metrics. A statistical analysis found that there is a negative correlation between the number of bins returned and the number of thermostats per bin: as the total bin count increases, the number of thermostats per bin decreases. In 2019, not only were fewer bins collected than in 2018, the number of thermostats on average per bin also declined, resulting in a low number of thermostats returned to TRC in the time period.

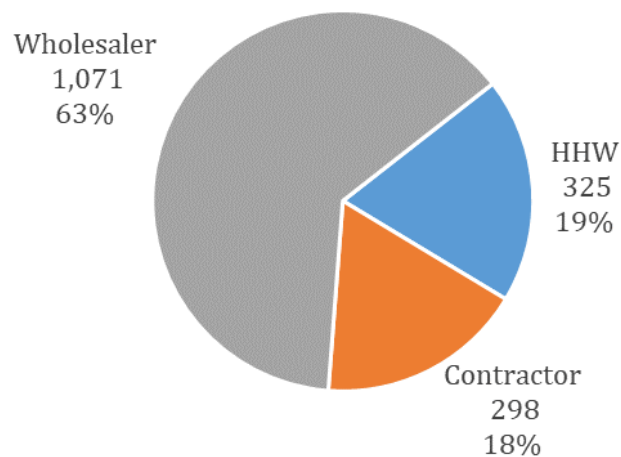

FIGURE 1.9: TOTAL BINS AND AVERAGE NUMBER OF THERMOSTATS PER BIN OVER TIME

SECTION 2: Channel Partner Analysis

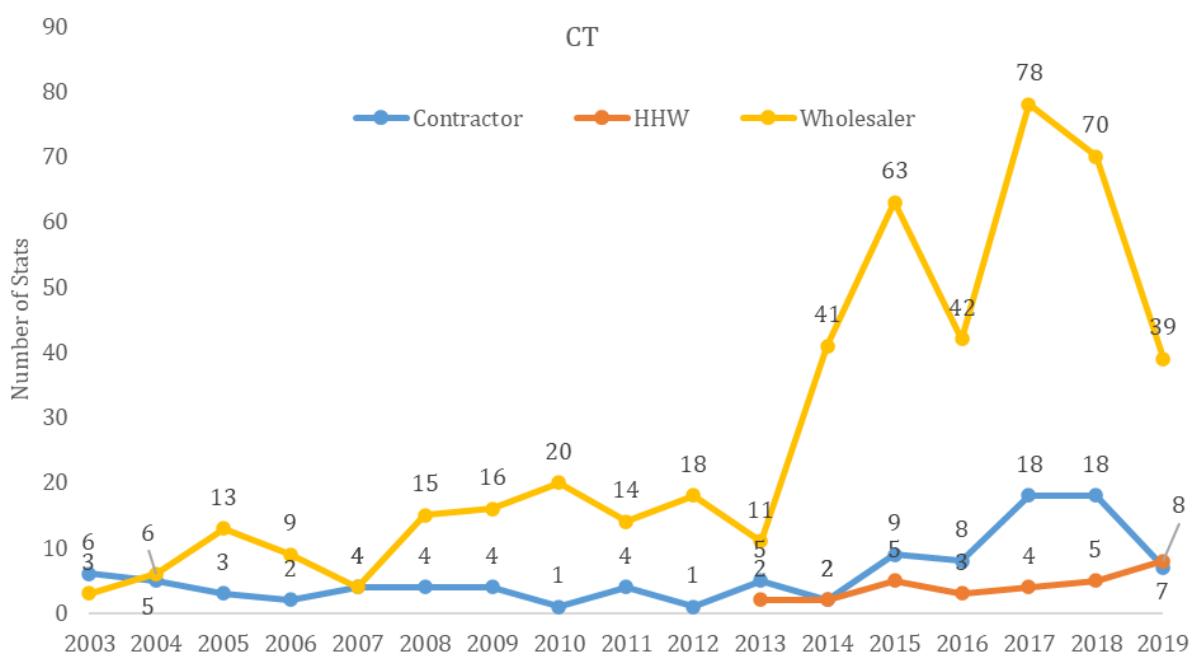

Section 2 of the report examines the partner locations in more detail. Most thermostats collected in the state were through **wholesalers (63%)**, followed by nearly equal amounts collected by **hazardous household waste (HHW, 19%) facilities** and **contractors (18%)**. HHW facilities contributed a much higher fraction of the total than in 2018 (6% of 2018 total), increasing from 200 to 325 thermostats in 2019. Figure 2.1 shows the distribution of thermostats collected by location type in 2019.

FIGURE 2.1: THERMOSTATS COLLECTED BY LOCATION TYPE IN 2019

The number of bins returned by both wholesalers and contractors was very high in 2017 and 2018 relative to historical patterns, however both of these channel partners had significantly fewer bins in 2019. **Wholesalers returned only 39 bins** to TRC, while only **7 contractor bins were submitted**. As noted, HHW bins increased, accounting for **8 HHW bins** in 2019. Figure 2.2 displays the change in the number of bins returned by thermostat collection type over time in Connecticut.

FIGURE 2.2: THERMOSTAT BINS RETURNED BY LOCATION TYPE OVER TIME

In 2019, **44 (22%) locations** with a bin in the state of Connecticut sent back one bin for recycling, while **5 (2%) locations** returned two bins. No locations returned three or more bins in 2019. The distribution is displayed in Figure 2.3.

FIGURE 2.3: PERCENTAGE OF STORES RETURNING A BIN IN 2019

An analysis of bins and thermostats returned by county revealed that the top performing counties were **New Haven (14 bins, 631 thermostats)** and **Hartford (17 bins, 496 thermostats)**, followed by **Fairfield (9 bins, 268 thermostats)** and **New London (6 bins, 250 thermostats)**. Figure 2.4 displays the number of bins and thermostats returned by county in 2019.

FIGURE 2.4: BINS AND TOTAL THERMOSTATS RETURNED IN 2019 BY COUNTY

County Name	Total T-stats	Total Bins
New Haven	631	14
Hartford	496	17
Fairfield	268	9
New London	250	6
Litchfield	25	3
Middlesex	10	2
Windham	7	1
Tolland	7	2

TRC works with channel partners to successfully collect thermostats, and the following figures illustrate performance by partner. **Kelly Supply (264 thermostats)** returned the highest number of thermostats in Connecticut in 2019, followed by **Af Plumbing Supply (163 thermostats)** and **Grainger (123 thermostats)**. Notably, only one of the top four 2018 contributors made it onto the list of top ten contributing companies in 2019. This suggests a lack of participation in 2019 may have contributed to suppressed collection numbers of bins and thermostats, and these thermostats may be collected subsequently in 2020. Figure 2.5 displays the top performing partners by total bins returned in 2019.

FIGURE 2.5: T-STATS BY TOP PERFORMING CHANNEL PARTNERS IN THE STATE

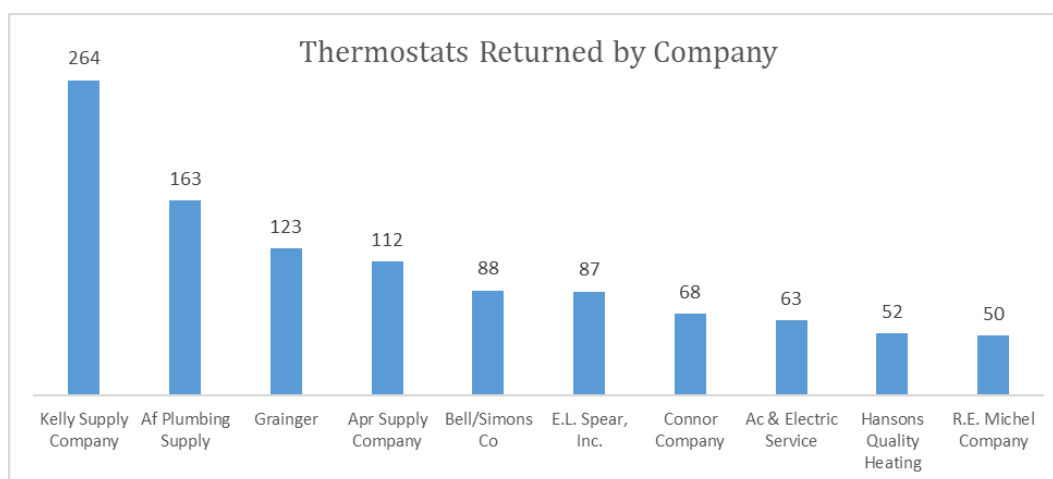

Figure 2.6 shows top performers by total bins and thermostats returned, and average number of thermostats per bin.

FIGURE 2.6: TOP PERFORMING PARTNERS BY BIN AND THERMOSTAT RETURNS

Company Name	No. of Thermostats	No. of Bins	Thermostats / Bin
Kelly Supply Company	264	2	132
Af Plumbing Supply	163	2	82
Grainger	123	1	123
Apr Supply Company	112	2	56
Bell/Simons Co	88	2	44
E.L. Spear, Inc.	87	1	87
Connor Company	68	1	68
Ac & Electric Service	63	1	63
Hansons Quality Heating	52	1	52
R.E. Michel Company	50	1	50

To boost participation, TRC conducted site visits to collection locations that may not have returned a bin recently. In 2019, 50 site visits were conducted and 193 'miss you' calls were placed to 117 different locations in Connecticut. All visits occurred in May 2019. Figure 2.7 displays the relationship between the number of site visits per month, bins returned per month, and the number of thermostats (shown in 100's) returned per month. Site visits appear to have had a very significant impact on the number of bins returned, as more than three times the number of bins were returned in May (19 bins) as the next highest month of April (6 bins) which was likely impacted positively by the 39 calls placed to channel partners in that month.

FIGURE 2.7: RELATIONSHIP BETWEEN SITE VISITS AND BINS AND THERMOSTATS RETURNED PER MONTH

Figure 2.8 displays the relationship between the number of calls per month, the bins returned per month, and the number of thermostats (by 100's) returned per month. All calls were placed in April, July and October. The called locations in 2019, returned 24 bins total, 9 of which were returned by locations that did *not* also receive a site visit. From Figure 2.8, increases in bin returns appear to coincide with months during which calls were made, though October only saw 3 bins returned despite placement of 82 calls in that month.

FIGURE 2.8: RELATIONSHIP BETWEEN 'MISS YOU' CALLS AND BINS AND THERMOSTATS RETURNED PER MONTH

Figure 2.9 examines the return rates of four groups – active locations that did not receive a call or visit, locations that received at least one visit, locations that received at least one call, and locations that received both a call and visit. Similar to 2018, calls appeared to have a much smaller impact on returns than visits. Locations that only received a call had only a 13% active participation rate, equivalent to that of locations that received no reminder at all. The rate of active participation (which refers to locations that returned at least one bin) in 2019 is significantly greater for locations that received a visit or visit and call with 40% and 44% active participation, respectively. On average, visited locations returned 0.40 bins per location (a lower rate than 0.63 in 2018), and the 34 locations that received both a call and a visit returned 15 bins.

FIGURE 2.9: PERCENT CHANGE IN BIN AND THERMOSTAT RETURNS FOR LOCATIONS THAT RECEIVED A VISIT OR CALL OVER LOCATIONS THAT DID NOT RECEIVE EITHER

	No Visit or Call	Visit	Call	Visit & Call
Number of Participating Locations	84	15	68	35
Rate of Active Participation*	23%	40%	13%	43%
Bins per Participating Location	0.27	0.40	0.13	0.47
Thermostats per Participating Location	12	14	2	10
Thermostats per Bin	44	35	14	21

*Fraction of participating locations that returned one or more bins during 2019

SECTION 3: Comparisons to National and Other States' Data

To compare how the state collection partners performed in 2019, the national average for the number of bins returned per locations that returned at least one bin was calculated and compared to the state average since 2012. The average numbers of bins do not include locations that did not return any bins in a given year. It should be noted that when making comparisons, each state has different regulations, different mix of housing types, local policies, and incentives that may uniquely impact return patterns in that region. Overall, the average number of bins returned annually per location was higher in Connecticut than the U.S. average in 2017, but lower in both 2018 and 2019.

FIGURE 3.1: AVERAGE NUMBER OF BINS RETURNED PER LOCATION PER YEAR

Figure 3.2 displays the locations in Connecticut that returned more than one bin in a given year since 2014, and Figure 3.3 displays the top 10 partners in the U.S. over the same period in terms of the number of bins returned. Some of the largest contributors in recent years were not participants in 2019, likely resulting in a significant impact on bin and thermostat collections in 2019.

Figure 3.4 displays total percentage of locations that actively participated in the program (active participation defined as sending back at least one bin) in 2019, for all the states that mandate thermostat returns reporting as well as the U.S. national average for all states (reporting and non-reporting). **In 2019, 24% of active locations in Connecticut returned at least one bin** compared to a national average of 31%. Like 2018, the state with the highest percentage of locations returning a bin in 2019 was Rhode Island (59%).

FIGURE 3.4: MANDATORY REPORTING STATES' PERCENTAGE OF LOCATIONS RETURNING A BIN IN 2019

Figure 3.5 compares the state rates for several analytics in 2019. These include: total whole thermostats, bins, and loose switches collected, the number of thermostats collected by total locations and per actively participating locations, the number of thermostats per bin returned on average in 2019, the equivalent average, the number of mercury thermostat equivalents returned in 2019, and finally the percent change in mercury thermostat equivalents from 2018 to 2019. The equivalent average is an average of the number of switches in whole thermostats collected in the state, and it is used to calculate the number of thermostats represented by returned loose switches. The thermostat equivalent number includes the totals of whole thermostats returned plus the equivalent number of thermostats representative of loose mercury switches that are collected. The states displayed are those that mandate thermostat returns reporting and the average is for all regulated states that return bins.

FIGURE 3.5: COMPARISONS OF MANDATORY REPORTING STATES AMONG SEVERAL METRICS

State	Whole T-Stats	Bins	Loose Switches	T-Stats returned per total # of locations with bins	Average T-Stats/bin	Average T-Stats collected per location that returned at least one bin in 2019	Equivalent Average	T-Stat Equivalents in 2019	% Change over 2018
CA	14,305	577	3,563	7	25	35	1.74	16,350	4%

Regulated State Avg	5,597	143	983	19	43	61	1.23	6,327	-2%

Figure 3.6 further compares this state data by showing how each state ranked in each of these categories, from highest to lowest. The low number of bin returns, especially from high-volume channel partners, resulted in Connecticut's 2019 program achieving lower collection than the regulated state average for nearly every category. The states compared in Figure 3.6 are those that mandate thermostat collection reporting and the average is for regulated states.

FIGURE 3.6: COMPARISON AND RANKING OF MANDATORY REPORTING STATES ACROSS SEVERAL METRICS

Figure 3.7 below shows the quantity of mercury collected through TRC's program in Connecticut and neighboring states between 2012 and 2019. Collection of mercury in Connecticut in 2019 decreased approximately 24% from the previous year and 6% below the collection levels achieved in 2016.

FIGURE 3.7: MERCURY COLLECTION RELATIVE TO PEER NEW ENGLAND STATES

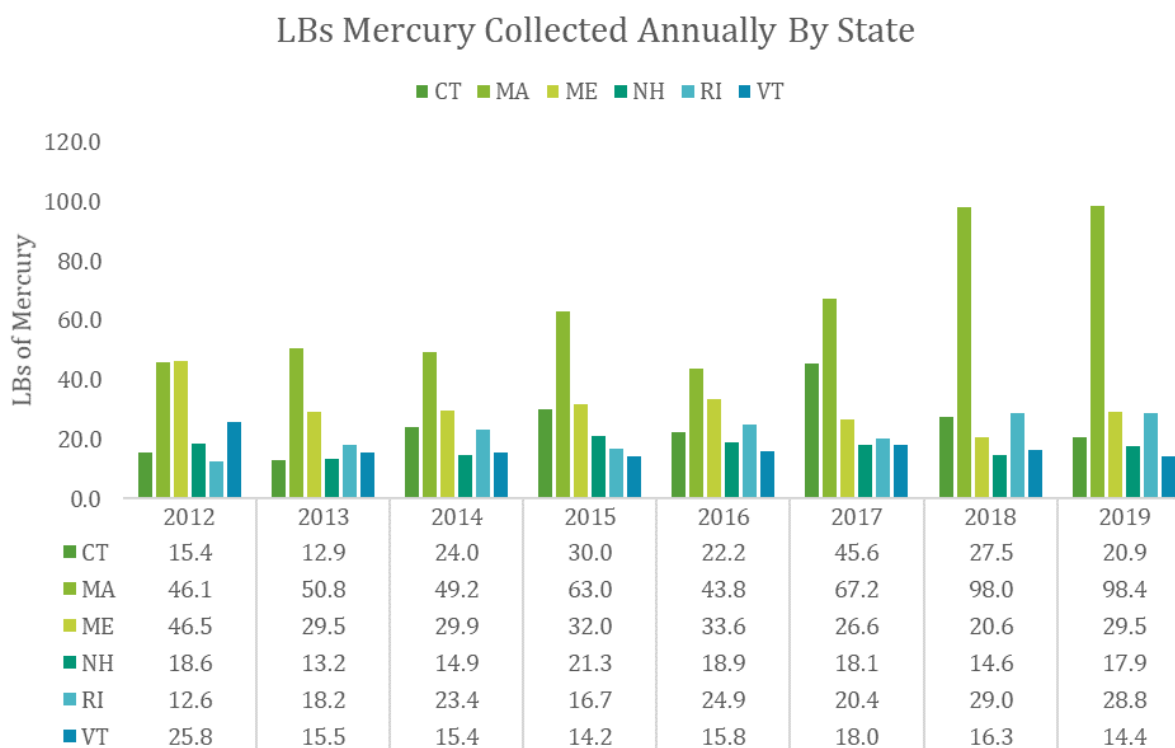

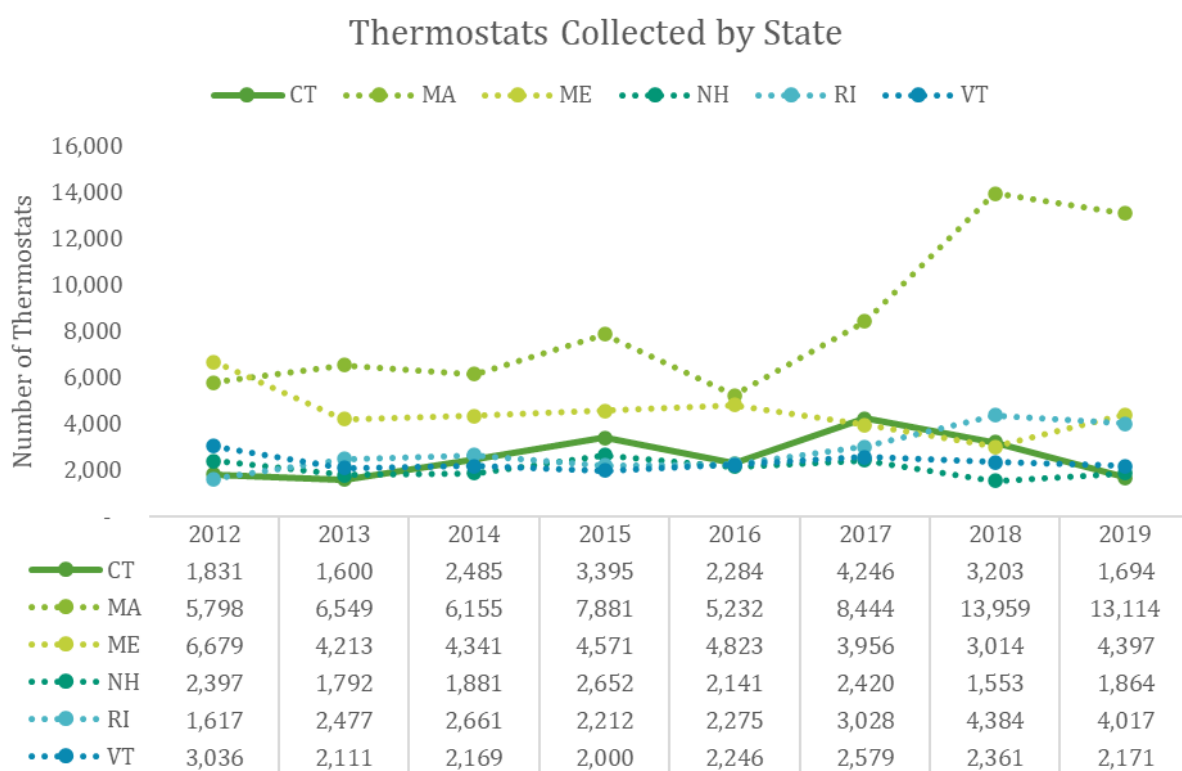

Figure 3.8 below illustrates thermostat collection relative to other New England States since 2012. Returns of thermostats declined in 2019 from 2018 by a wide margin, 47% in Connecticut. Other New England states did not experience the same trend, with Maine and New Hampshire increasing collections over 2018 and Massachusetts, Rhode Island and Vermont collecting slightly lower numbers of thermostats over the previous year.

FIGURE 3.8: THERMOSTAT COLLECTION RELATIVE TO PEER NEW ENGLAND STATES

Thermostats and bin returns are two metrics measuring program participation that are correlated. In 2011-2013, the number of thermostats returned fluctuated slightly while the number of bins returned was mostly static. Figure 3.9 shows bins returned and thermostat collections concomitantly by year so relative rates of increase and decrease can be observed. In 2014, after Connecticut's policy implementation in 2013, both thermostats and bin returns increased nearly linearly. As seen previously, thermostat collections declined significantly in 2016 along with bin returns, rebounding to all-time highs in 2017. The drop in 2018 was followed by an even larger decline in bin returns and thermostats in 2019.

FIGURE 3.9: COMPARISON OF THERMOSTATS RETURNED VS BINS RECEIVED

The average quantity of thermostats per bin is graphed in Figure 3.10 below, which illustrates the relationship more clearly between increased bins returned and increased thermostat returns. The average number of thermostats returned in a bin has declined consistently since 2012 with a slow-down in the rate of decline in 2016 and 2017. The rate of decline increased again in 2018 and was lower in 2019. In Maine and Rhode Island, the number of thermostats collected per bin returned increased in 2019, while Massachusetts, and Vermont and New Hampshire rates per bin declined slightly like Connecticut.

FIGURE 3.10: AVERAGE NUMBER THERMOSTATS PER BIN RELATIVE TO PEER STATES

Conclusions

Results in Year 6 of Mandatory TRC Program in Connecticut

Thermostat collections in CT were significantly lower in 2019 than in recent previous years, by significant margins compared with the collection high in 2017, but also in comparison to 2018. Correspondingly, bin returns were also very low in 2019 at a total of 54, down from 93 a year previously. Looking more closely at channel partner participation, it can be seen that lower participation was seen from both contractors and wholesalers. Contractors returned 18 bins in each of the previous years, yet only 7 bins total in 2019. More significantly, wholesalers returned 70 bins in 2018, yet only 39 in 2019.

Historically, collections have been impacted by high rates of participation from a few channel partners, while 2019 was absent participation from the most significant historical contributors. Forty-nine partners returned a single bin or two to TRC, while 229 channel partners did not return a bin. Of those bins collected, the average number of thermostats was lower than any year previously which further impacts the mercury collected.

The low participation in 2019 suggests that targeted outreach to historical participants that have been successful accumulating thermostats at collection points could prompt the submission of bins that may have amassed thermostats during 2019 or before, and successfully capture those units through TRC's program. For instance, three organizations - Sid Harvey Industries, R. E. Michel Company and Plimpton & Hills Corp - were responsible for nearly one-third of all collected in 2018. However, those same companies collectively returned only one bin in 2019. Outreach effort has historically been targeted at partners who have not participated recently, so it is to be expected that some of the larger volume companies that were non-participants would already be on the target list for 2020 contact, and if not, they might be added.

It would be expected that 2020 collections could rebound and offset the lower collection volumes seen in 2019. It should be noted that the "Miss You" calls TRC conducted in 2019

appear to have had little to no impact on wholesaler participation, while in-person site visits appear to have had a very tangible impact on return rates as can be seen by the high level of participation in May, when all site visits occurred at collection points. Site visits and in-person interactions mattered again in 2019. This may be a function of higher-impact impressions associated with in-person visits, the challenges associated with connecting to the right point of contact when communicating by phone, or other factors. Regardless, site visits in 2020 should prioritize channel partners who have historically had high collection rates.

HOW MERCURY THERMOSTAT WASTE IS HANDLED

WASTE MERCURY-ADDED THERMOSTAT MANAGEMENT THROUGH VEOLIA ES TECHNICAL SOLUTIONS, LLC.

TRC containers with waste mercury-switch thermostats are received at a fulfillment/inventory center in Port Washington, Wisconsin (WIR000130591). The facility is owned and operated by Veolia ES Technical Solutions, L.L.C. (Veolia) under contract with TRC.

All recycling containers, including pails and bins are received at the loading dock and sent to the TRC inventory room. The container and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The containers are returned to the location that sent it in with a new prepaid address label within 3 weeks of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The thermostats and any loose bulbs collected from the containers are consolidated into a special 55-gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are captured and vented when the drum is opened.

The 55-gallon drum is then shipped to Veolia's mercury recovery facility (WID988566543) for final processing of the mercury ampules (switches). Veolia Environmental Services meets or exceeds all local, state, federal and EPA regulations for the management of the product.

The containers are returned from the storage area to the mercury recovery processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the recycling and disposal of waste within 12 months of acceptance at the processing facility.

Small quantities of thermostats are removed from the container, which is then closed again. The bulbs are removed from the thermostats and placed into processing vessel at the work station. Once the processing vessel is full, the vessel is loaded into the mercury recovery retort oven.

If a bulb breaks and the mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. The TRC inventory

and processing areas are equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to ensure that any spillage is cleaned up and not left to evaporate.

Veolia meets or exceeds all local, state, federal and EPA regulations for the management of the product. The mercury recovery facility and process are permitted by the Wisconsin Department of Natural Resources. Veolia's approvals for mercury recovery/recycling include:

- EPA - identification WID988566543
- Hazardous Waste Storage License #6008
- Hazardous Waste Treatment License (Mercury Recovery Operations) #4585
- Air Operation Permit #246076050-S01
- Storm Water General Permit #WI-S067857-4

In addition to the regulatory permits, both Veolia Port Washington facilities have developed and maintain management systems in accordance with ISO 14001-2004, OHSAS 18001-2007, and Responsible Recycling (R2:2013) Practice. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

The mercury containing ampules are retorted at Veolia's Port Washington Mineral Springs facility. The mercury is removed during the retort process. The post retort debris consists of broken glass ampules. The debris is tested for residual mercury to document the removal of the mercury to levels below the US EPA Land Disposal Restriction (LDR) levels. The debris is then disposal of as a non-hazardous solid waste at Advanced Disposal Glacier Ridge Landfill, LLC in Horicon, Wisconsin.

A site evaluation of the Veolia Processing Center in Port Washington, WI was conducted by TRC's operations and compliance manager, Danielle Myers, in late October 2019. An audit is scheduled to be completed every two years.

Part II Declaration and Signature Authorization of Officer

Under penalties of perjury, I declare that I am an officer of the above organization and that I have examined a copy of the organization's 2018 electronic return and accompanying schedules and statements and to the best of my knowledge and belief, they are true, correct, and complete. I further declare that the amount in Part I above is the amount shown on the copy of the organization's electronic return. I consent to allow my intermediate service provider, transmitter, or electronic return originator (ERO) to send the organization's return to the IRS and to receive from the IRS (a) an acknowledgement of receipt or reason for rejection of the transmission, (b) the reason for any delay in processing the return or refund, and (c) the date of any refund. If applicable, I authorize the U.S. Treasury and its designated Financial Agent to initiate an electronic funds withdrawal (direct debit) entry to the financial institution account indicated in the tax preparation software for payment of the organization's federal taxes owed on this return, and the financial institution to debit the entry to this account. To revoke a payment, I must contact the U.S. Treasury Financial Agent at 1-888-353-4537 no later than 2 business days prior to the payment (settlement) date. I also authorize the financial institutions involved in the processing of the electronic payment of taxes to receive confidential information necessary to answer inquiries and resolve issues related to the payment. I have selected a personal identification number (PIN) as my signature for the organization's electronic return and, if applicable, the organization's consent to electronic funds withdrawal.

Officer's PIN: check one box only

☒ I authorize **BURDETTE SMITH & BISH LLC** to enter my PIN **22314**
ERO firm name Enter five numbers, but do not enter all zeros

as my signature on the organization's tax year 2018 electronically filed return. If I have indicated within this return that a copy of the return is being filed with a state agency(ies) regulating charities as part of the IRS Fed/State program, I also authorize the aforementioned ERO to enter my PIN on the return's disclosure consent screen.

☐ As an officer of the organization, I will enter my PIN as my signature on the organization's tax year 2018 electronically filed return. If I have indicated within this return that a copy of the return is being filed with a state agency(ies) regulating charities as part of the IRS Fed/State program, I will enter my PIN on the return's disclosure consent screen.

Officer's signature ▶ _____ Date ▶ _____

Part III Certification and Authentication

ERO's EFIN/PIN. Enter your six-digit electronic filing identification number (EFIN) followed by your five-digit self-selected PIN.

54409522314

Do not enter all zeros

I certify that the above numeric entry is my PIN, which is my signature on the 2018 electronically filed return for the organization indicated above. I confirm that I am submitting this return in accordance with the requirements of **Pub. 4163**, Modernized e-File (MeF) Information for Authorized IRS e-file Providers for Business Returns.
