LETTER FROM THE EXECUTIVE DIRECTOR

As we move forward, it becomes increasingly difficult to maintain the same level of mercury

thermostat collections because we continue to make strides toward eliminating every last mercury

thermostat. We are dedicated to fulfilling TRC's mission to promote the safe collection and proper

disposal of mercury-containing thermostats while keeping mercury out of the waste stream in order

to protect the environment.

As existing regulations around manufacturer funded mercury thermostat collections sunset, we

remain steadfast in our efforts and will continue to collect mercury containing thermostats in all 48

contiguous states. We appreciate that legislators recognize our decades of effort and success.

TRC will continue to target mercury thermostat collections and work with our partners in the HVAC

industry, the waste sector, the energy sector, and the regulatory community to achieve positive

results. As you might expect, our numbers will decrease because of our previous successes, but our

diligence and dedication remain.

We are happy to provide you with this year's annual report. Please do not hesitate to contact us with

comments or questions.

Danielle Myers

Sincerely,

Danielle Myers, Executive Director

Ralph Vasami, Executive Vice President

PENNSYLVANIA

2022 Collections and Evaluation

The following analytical report details the annual program performance for mercury thermostat collection in the state of Pennsylvania in 2022.

A few of the program highlights for 2022 are included below:

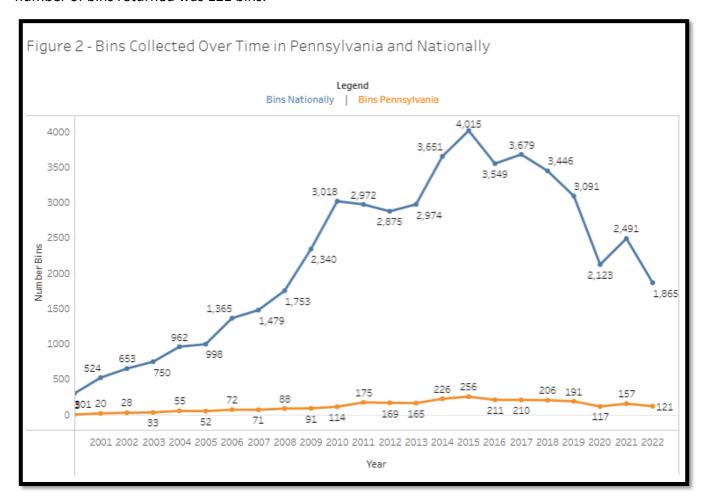

- In 2022 the program **collected 44.3 lbs. of mercury** in Pennsylvania. Since 2001, the annual quantity of mercury collected in Pennsylvania has averaged 74.0 lbs.
- The program collected **5,001 whole thermostats in 2022**. This was a 34% decrease over the number of thermostats collected in 2021. Since 2001, the average thermostat count per year is 7,763.
- The number of whole thermostats collected per bin in 2022 was 41 thermostats, a decrease from 48 in 2021.
- The counties with the most bins and thermostats returned in 2022 were Allegheny County (10 bins, 510 thermostats), Delaware County (8 bins, 463 thermostats), and York County (6 bins, 460 thermostats).
- In 2022, 31% of the partner locations returned at least one bin.
- A total of 210 'Miss You' calls were placed in 2022.
- In addition to 5,001 whole thermostats, 372 loose switches were collected, bringing the total number of "thermostat equivalents" returned in 2022 to 5,276, a decrease of 44% from 2021.

Section 1: Program Analytics

Section 1 of this report examines the annual performance of the thermostat collection recycling program in terms of bins, thermostats, and mercury collected as well as the year-over-year progression of the program. On average, the program has collected 74 lbs. of mercury and 7,763 whole thermostats per year since 2001. In 2022, the program collected 44.3 lbs. of mercury from 5,001 thermostats and 372 loose switches. Figure 1 below displays the total number of bins, the total number of thermostats, and the quantity of mercury collected in Pennsylvania since the beginning of the program.

Figure 1 - Program Performance Over Time						
Year	Number Bins	Number Thermostats	Mercury (Lb)			
2001	20	1,632	16.8			
2002	28	2,242	25.8

2022	121	5,001	44.3			
Total	2,831	178,558	1,702.5			
Average	123	7,763	74.0			

Figure 2 displays the number of bins collected in Pennsylvania since the initiation of the collection program, as well as the total number of bins collected in the U.S. over the same period. The number of bins collected in Pennsylvania has generally increased from 2000 to 2011. In 2014, bin returns increased again, peaking with highest number of bins returned in 2015 with 256 bins. In 2022, the number of bins returned was 121 bins.

The 44.3 lbs. of mercury collected in Pennsylvania in 2022 was 45% lower than the 81.2 lbs. collected in 2021. Figure 3 displays the quantity of mercury collected in Pennsylvania over time as well as the annual percent change in Pennsylvania and nationally.

Figure 3 - Quantity (Lb) of Mercury Collected in Program and Annual Changes to Pennsylvania and Nationally

Average	74.0				

Pennsylvania collected 5,001 thermostats in 2022. This was a 34% decrease from the number of thermostats collected in 2021. Figure 4 displays the total number of thermostats collected in Pennsylvania and nationally, and Figure 5 shares the underlying data as well as the calculated annual percent change.

Average 7,763	Average	7,763		

Figure 6 displays the monthly distribution of bins and thermostats collected in Pennsylvania in 2022. The months with the greatest number of thermostats returned were March (839 thermostats, 14 bins) and November (788 thermostats, 17 bins). The month with the greatest number of bins returned was November (17 bins). Conversely, the month with the least activity in 2022 was October.

The highest number of thermostats per bin returned occurred in September (68.4 thermostats per bin each month). Figure 7 shows the average number of thermostats per bin returned per month for the year.

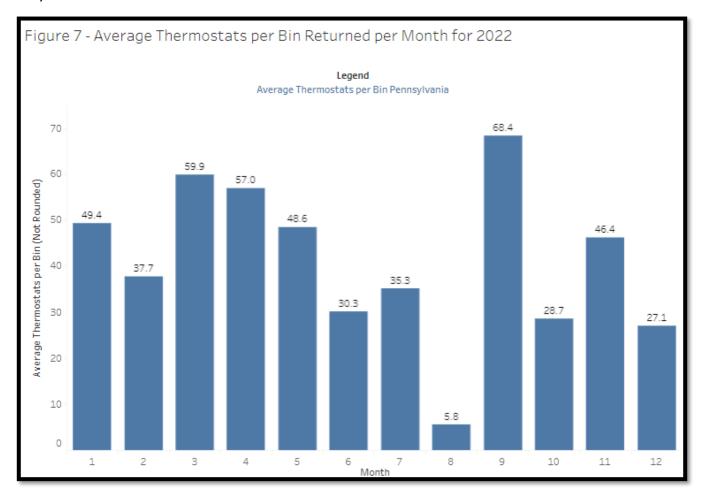

Figure 8 displays the average number of thermostats returned per bin in Pennsylvania and in the U.S. since the beginning of the Pennsylvania program. Nationally, the number of thermostats per bin has been decreasing annually since 2000. In Pennsylvania a similar pattern is observed, with the exception of a few years. The number of thermostats per bin in 2022 (41 thermostats per bin avg.) decreased from 2021 (48 thermostats per bin avg.).

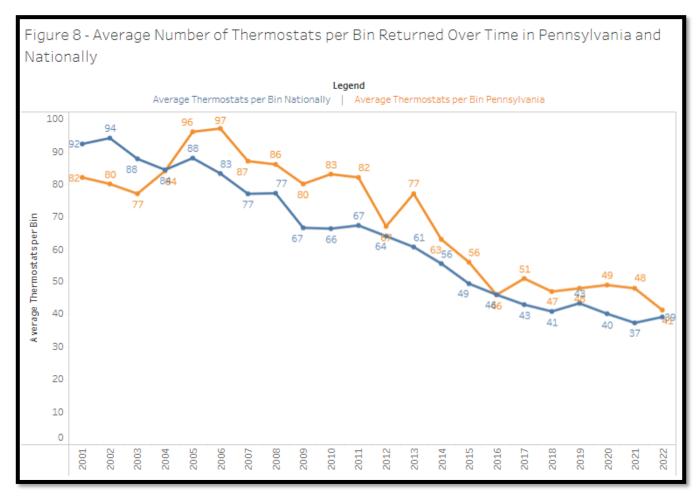

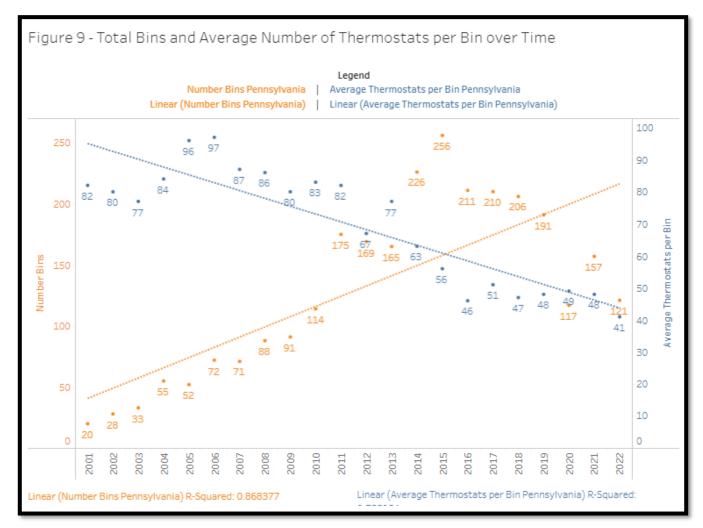

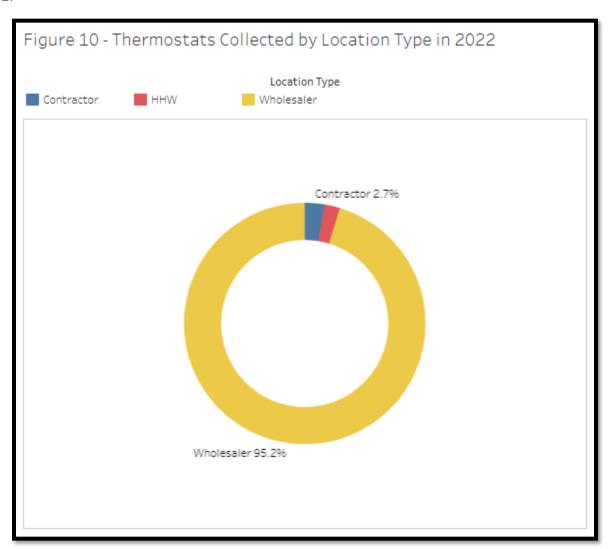

Figure 9 plots the total bins returned over time along with the average number of thermostats per bin over the same period. In general, the number of bins returned in Pennsylvania increased steadily from 2000 to 2015. At the same time, thermostats per bin generally grew until 2006, after which the trend in thermostats per bin dropped. A negative correlation has been identified between the number of bins returned and the number of thermostats per bin.

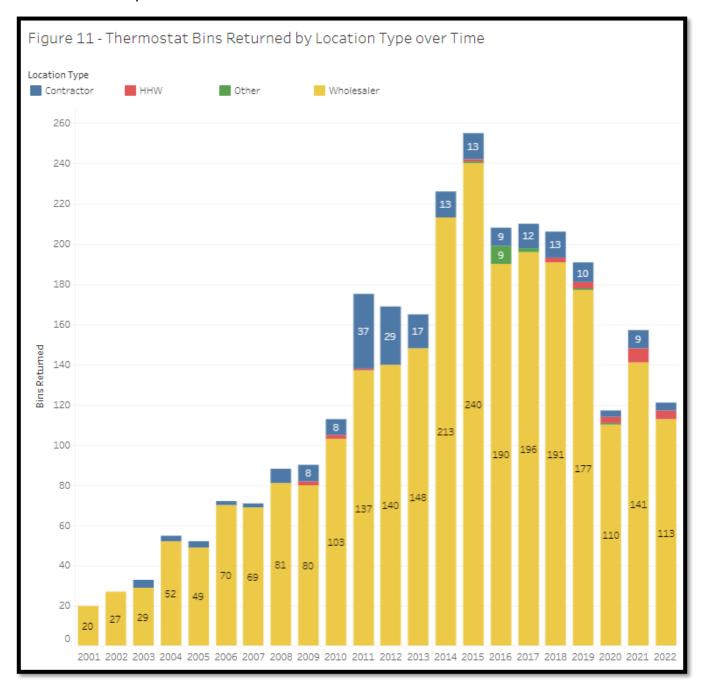

SECTION 2: Channel Partner Analysis

Section 2 of the report examines the partner locations in more detail. Most thermostats collected in Pennsylvania were through wholesalers (95.2%) with the remaining thermostats collected by contractors and HHWs. Figure 10 shows the distribution of thermostats collected by location type in 2022.

The number of bins returned in 2022 decreased across wholesalers, HHWs and contractors from 2021 levels. Figure 11 displays the change in the number of bins returned by thermostat collection type over time in Pennsylvania.

In 2022, 30% of Pennsylvania locations possessing a collection bin sent back at least one bin for recycling. The distribution is displayed in Figure 12.

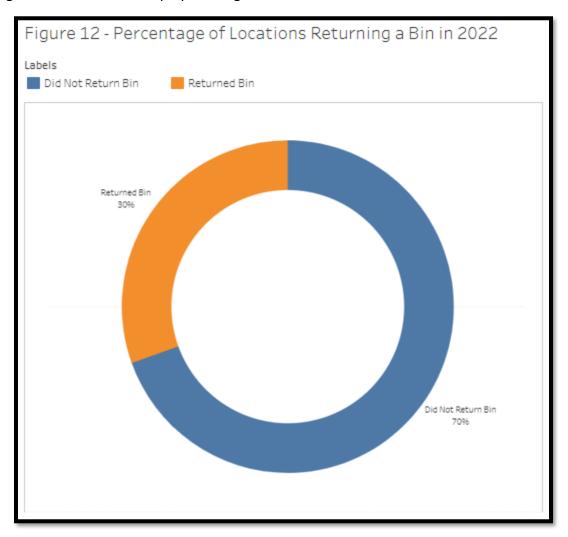

Figure 13 displays the total bins and thermostats returned by county in 2022. An analysis of the top performing counties revealed that Allegheny County (10 bins, 510 thermostats), Delaware County (8 bins, 463 thermostats), and York County (6 bins, 460 thermostats) returned the greatest number of bins and thermostats in 2022.

	Returned and Total Thermosta	
by County		
	Number Thermostats	Number Bins

TRC partner R. E. Michel (1,642 thermostats) returned the highest number of thermostats in Pennsylvania in 2022, followed by Johnstone Supply (961 thermostats) and APR Supply (455 thermostats). Apart from these locations, two program partners returned more than 300 thermostats each. Figure 14 displays the top performers in terms of total thermostats returned in 2022.

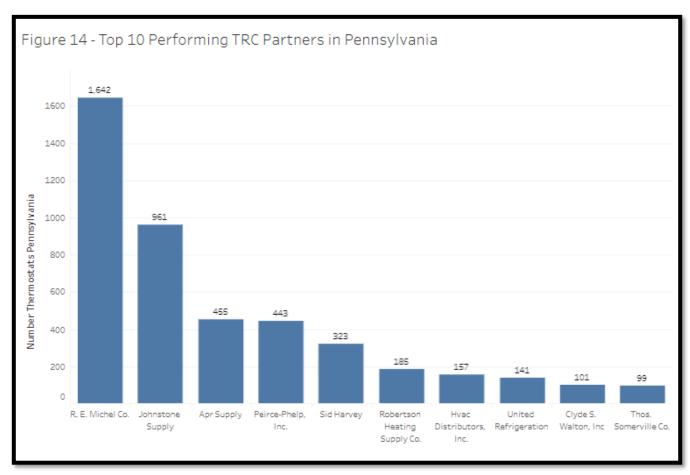

Figure 15 includes the top performers for 2022 by each of the following categories: total bins returned, total thermostats returned, and average number of thermostats per bin.

TRC conducted several activities in 2022 to increase the number of bins and thermostats returned in Pennsylvania. These activities included 'miss you' calls to collection locations that may not have returned a bin recently. In 2022, there were no site visits completed. Figure 16 displays the relationship between the number of site visits per month, the bins returned per month, and the number of thermostats (in 100's) returned per month.

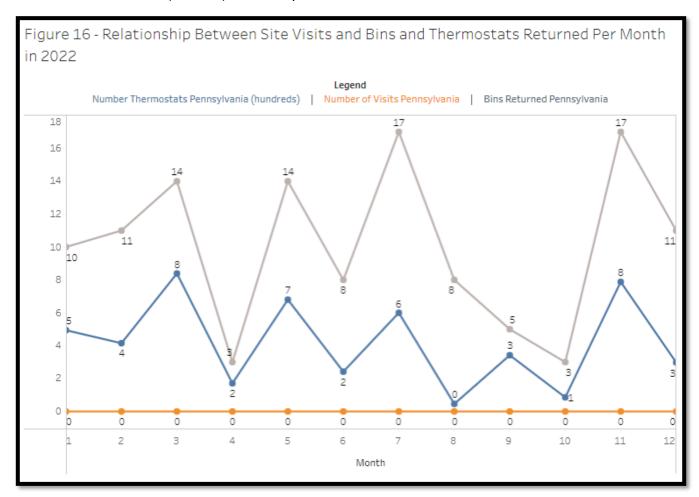

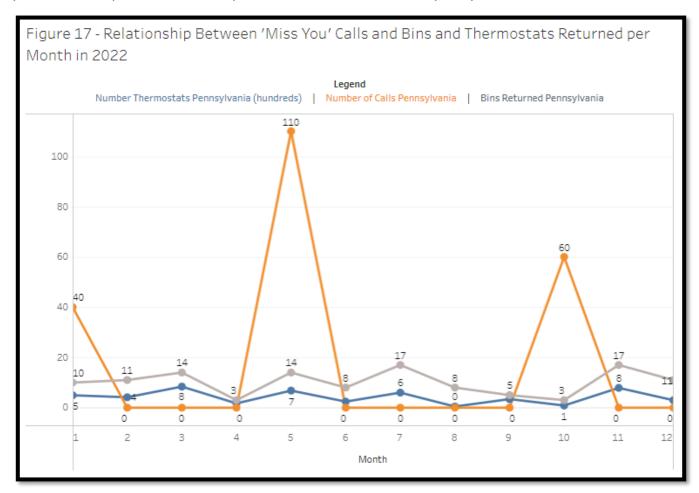

Figure 17 displays the relationship between the number of calls per month, the bins returned per month and the number of thermostats (by 100's) returned per month. In 2022, a total of 210 'miss you' calls were placed. Calls were placed in the months of January, May, and October.

SECTION 3: Comparisons to National and Other States' Data

To compare how the Pennsylvania collection partners performed in 2022, the national average for the number of bins returned per location that returned at least one bin was calculated and compared to the Pennsylvania average since 2012. The average number of bins does not include locations that did not return any bins in that year. It should be noted that when making comparisons each state has different regulations, a different mix of housing types, local policies, and incentives that may have a unique impact on returns. Overall, the average number of bins returned per location per year was lower in Pennsylvania than the U.S. average, as shown in Figure 18.

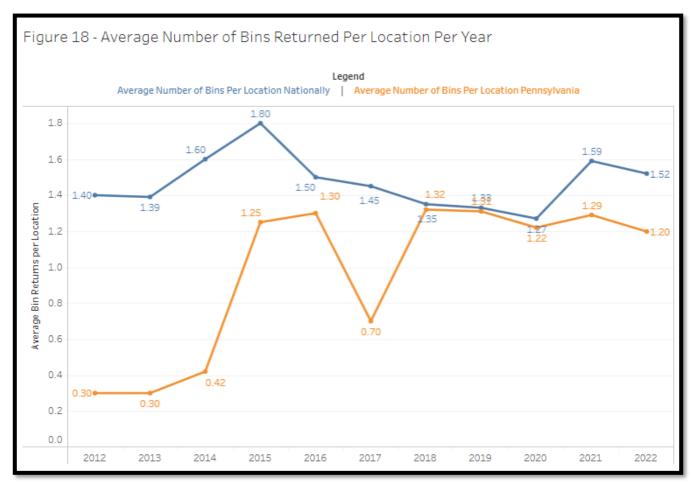

Figure 19 displays the locations in Pennsylvania that returned more than one bin in a given year since 2019, and Figure 20 displays the top 10 partners in the U.S. over the same period in terms of the number of bins returned.

Figure 21 displays total percentage of locations that actively participated in the program (active participation defined as sending back at least one bin) in 2022, for all the states that mandate thermostat returns reporting as well as the U.S. national average for all states (reporting and non-reporting). In 2022, 31% of the locations in PA returned at least one bin compared to a national average of 34%. The highest percentage of locations returning a bin in 2022 amongst states that mandate thermostat returns reporting was Minnesota (45%).

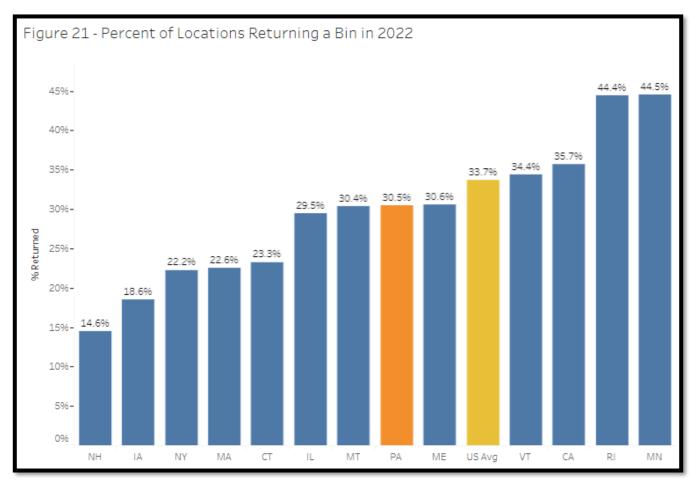

Figure 22 compares the Pennsylvania and national rates for several analytics. These include: total whole thermostats, bins, and loose switches collected, number of thermostats collected by total locations and per actively participating locations, number of thermostats per bin returned on average, equivalent average, number of mercury thermostat equivalents returned in 2022, and finally percent change in mercury thermostat conversion from 2021 to 2022. The equivalent average is an average of the number of switches in whole thermostats collected in Pennsylvania, and it is used to represent an equivalent number of thermostats from returned loose switches. The thermostat equivalent number includes the total of whole thermostats returned plus the number of thermostats estimated from loose switches. The states displayed are those that mandate thermostat returns reporting and the U.S. average is for all states that return bins (reporting and non-reporting).

Figure	Figure 22 - Comparison of States and US Average Among Several Categories

2022 Collections by Brand

In Pennsylvania, Thermostat Recycling Corporation (TRC) recovered the equivalent of 5,276 mercury thermostats from 5,001 whole mercury thermostats plus 372 mercury switches removed from thermostats. A total of 44.3 pounds of mercury was diverted from solid waste. *Please note the explanation of the converted thermostats or thermostat equivalents below.¹ An example of the mercury ampoule is shown below.

As required by the state statute, a table of thermostat brand holders with their corresponding thermostats, the number of switches and the pounds of mercury recycled is below. It is important to note that there remain non-members whose thermostats the TRC collection program recycles. They are listed in the table as "Non-Member Brands".

¹ A mercury thermostat contains a variable amount of mercury ampoules or "switches" attached to the subbase of the thermostat. These glass ampoules often are collected in the recycling container without the intact thermostat attached to them. TRC collects and counts these loose ampoules and recycles them. To derive the converted thermostat or thermostat equivalent, the program takes the following calculations to develop the converted thermostat or thermostat equivalent. First, TRC will count the total whole (intact) thermostats collected in the recycling bins. From these units, there is an intact ampoules count. TRC then takes the intact ampoules divided by the whole (intact) thermostats or otherwise known as the conversion ratio. After the conversion ratio is calculated, TRC will multiple the loose mercury switches by the conversion ratio. Lastly, we add this result to the whole (intact) thermostats to produce the converted thermostats or thermostat equivalents.

2022 Summary of the Program Expenses

Below is a summary of program expenses for the Pennsylvania collection program in 2022. 2022 program expenses (reported in the annual report) are unaudited and are for management purposes only. Prior to submittal of this annual report, the expenses were reviewed by Kellen Company.

Program Component	2021	2022	Difference	
Direct Expense for Marketing & Outreach	\$ 6,480.00	\$ -	\$	(6,480.00)
Incentive/Promotional Payments			\$	-
Legal			\$	-
New Collection Containers			\$	-
Recycling Costs	\$ 30,984.97	\$ 18,980.06	\$	(12,004.91)
Travel			\$	-
TRC Staff & Administration	\$ 500.00	\$ 400.00	\$	(100.00)
Total Expenses	\$ 37,964.97	\$ 19,380.06	\$	(18,584.91)

APPENDICES

How Mercury Thermostat Waste is Handled

HOW MERCURY THERMOSTAT WASTE IS HANDLED

WASTE MERCURY-ADDED THERMOSTAT MANAGEMENT THROUGH VEOLIA ES TECHNICAL SOLUTIONS, LLC.

TRC containers with waste mercury-switch thermostats are received at a fulfillment/inventory center in Port Washington, Wisconsin (WIR000130591). The facility is owned and operated by Veolia ES Technical Solutions, L.L.C. (Veolia) under contract with TRC.

All recycling containers, including pails and bins are received at the loading dock and sent to the TRC inventory room. The container and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The containers are returned to the location that sent it in with a new prepaid address label within 3 weeks of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The thermostats and any loose bulbs collected from the containers are consolidated into a special 55-gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are captured and vented when the drum is opened.

The 55-gallon drum is then shipped to Veolia's mercury recovery facility (WID988566543) for final processing of the mercury ampules (switches). Veolia Environmental Services meets or exceeds all local, state, federal and EPA regulations for the management of the product.

The containers are returned from the storage area to the mercury recovery processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the recycling and disposal of waste within 12 months of acceptance at the processing facility.

Small quantities of thermostats are removed from the container, which is then closed again. The bulbs are removed from the thermostats and placed into processing vessel at the work station. Once the processing vessel is full, the vessel is loaded into the mercury recovery retort oven.

If a bulb breaks and the mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. The TRC inventory

and processing areas are equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to ensure that any spillage is cleaned up and not left to evaporate.

Veolia meets or exceeds all local, state, federal and EPA regulations for the management of the product. The mercury recovery facility and process are permitted by the Wisconsin Department of Natural Resources. Veolia's approvals for mercury recovery/recycling include:

- EPA identification WID988566543
- Hazardous Waste Storage License #6008
- Hazardous Waste Treatment License (Mercury Recovery Operations) #4585
- Air Operation Permit #246076050-S01
- Storm Water General Permit #WI-S067857-4

In addition to the regulatory permits, both Veolia Port Washington facilities have developed and maintain management systems in accordance with ISO 14001-2004, OHSAS 18001-2007, and Responsible Recycling (R2:2013) Practice. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

The mercury containing ampules are retorted at Veolia's Port Washington Mineral Springs facility. The mercury is removed during the retort process. The post retort debris consists of broken glass ampules. The debris is tested for residual mercury to document the removal of the mercury to levels below the US EPA Land Disposal Restriction (LDR) levels. The debris is then disposal of as a non-hazardous solid waste at Advanced Disposal Glacier Ridge Landfill, LLC in Horicon, Wisconsin.
