LETTER FROM THE EXECUTIVE DIRECTOR

As we move forward, it becomes increasingly difficult to maintain the same level of mercury thermostat collections because we continue to make strides toward eliminating every last mercury thermostat. We are dedicated to fulfilling TRC's mission to promote the safe collection and proper disposal of mercury-containing thermostats while keeping mercury out of the waste stream in order to protect the environment.

As existing regulations around manufacturer funded mercury thermostat collections sunset, we remain steadfast in our efforts and will continue to collect mercury containing thermostats in all 48 contiguous states. We appreciate that legislators recognize our decades of effort and success.

TRC will continue to target mercury thermostat collections and work with our partners in the HVAC industry, the waste sector, the energy sector, and the regulatory community to achieve positive results. As you might expect, our numbers will decrease because of our previous successes, but our diligence and dedication remain.

We are happy to provide you with this year's annual report. Please do not hesitate to contact us with comments or questions.

Sincerely,

A handwritten signature in cursive script that reads "Danielle Myers".

Danielle Myers, Executive Director

NEW YORK

2023 Collections and Evaluation

The following analytical report details the annual program performance for mercury thermostat collection in the state of New York in 2023.

A few of the program highlights for 2023 are included below:

- In 2023 the program **collected 18.5 lbs. of mercury** in New York. Since 2000, the annual quantity of mercury collected in New York has averaged 33.6 lbs.
- The program collected **2,118 whole thermostats in 2023**. This was a 36% decrease over the number of thermostats collected in 2022. Since 2000, the average thermostat count per year is 3,491.
- The **number of whole thermostats collected per bin in 2023 was 26 thermostats**, a decrease from 27 in 2022.
- The counties with the most bins and thermostats returned in 2023 were **Erie County (8 bins, 377 thermostats), Monroe County (8 bins, 268 thermostats), and Suffolk County (7 bins, 235 thermostats)**.
- In 2023, **33% of the partner locations returned at least one bin**.
- **A total of 392 'Miss You' calls were placed and 74 site visits were conducted in 2023** which resulted in a positive relationship of activity to bin returns.
- In addition to 2,118 whole thermostats, **404 loose switches were collected, bringing the total number of "thermostat equivalents" returned in 2023 to 2,450**, a decrease of 44% from 2022. It is important to note, in 2023 TRC collected almost 1,000 fewer loose switches in the state than we collected in 2022.

Section 1: Program Analytics

Section 1 of this report examines the annual performance of the thermostat collection recycling program in terms of bins, thermostats, and mercury collected as well as the year-over-year progression of the program. On average, the program has collected 33.6 lbs. of mercury and 3,491 whole thermostats per year since 2001. In 2023, the program collected 18.5 lbs. of mercury from 2,118 thermostats and 404 loose switches. Figure 1 below displays the total number of bins, the total number of thermostats, and the quantity of mercury collected in New York since the beginning of the program.

Figure 2 displays the number of bins collected in New York since the initiation of the collection program, as well as the total number of bins collected in the U.S. over the same period. The number of bins collected in New York has generally increased from 2000 to 2010. In 2014, bin returns increased again, peaking with the highest number of bins returned in 2017 with 204 bins. In 2023, the number of bins returned decreased to 80 bins.

The 18.5 lbs. of mercury collected in New York in 2023 was 47% lower than the 34.8 lbs. collected in 2022. Figure 3 displays the quantity of mercury collected in New York over time as well as the annual percent change in New York and nationally.

Figure 6 displays the monthly distribution of bins and thermostats collected in New York in 2023. The months with the greatest number of thermostats returned were May (460 thermostats, 15 bins), and August (258 thermostats, 5 bins). The months with the greatest number of bins returned were March (15 bins) and May (15 bins).

The highest number of thermostats per bin returned occurred in August and September (51.6 and 69.5 thermostats per bin each month, respectively). Figure 7 shows the average number of thermostats per bin returned per month for the year.

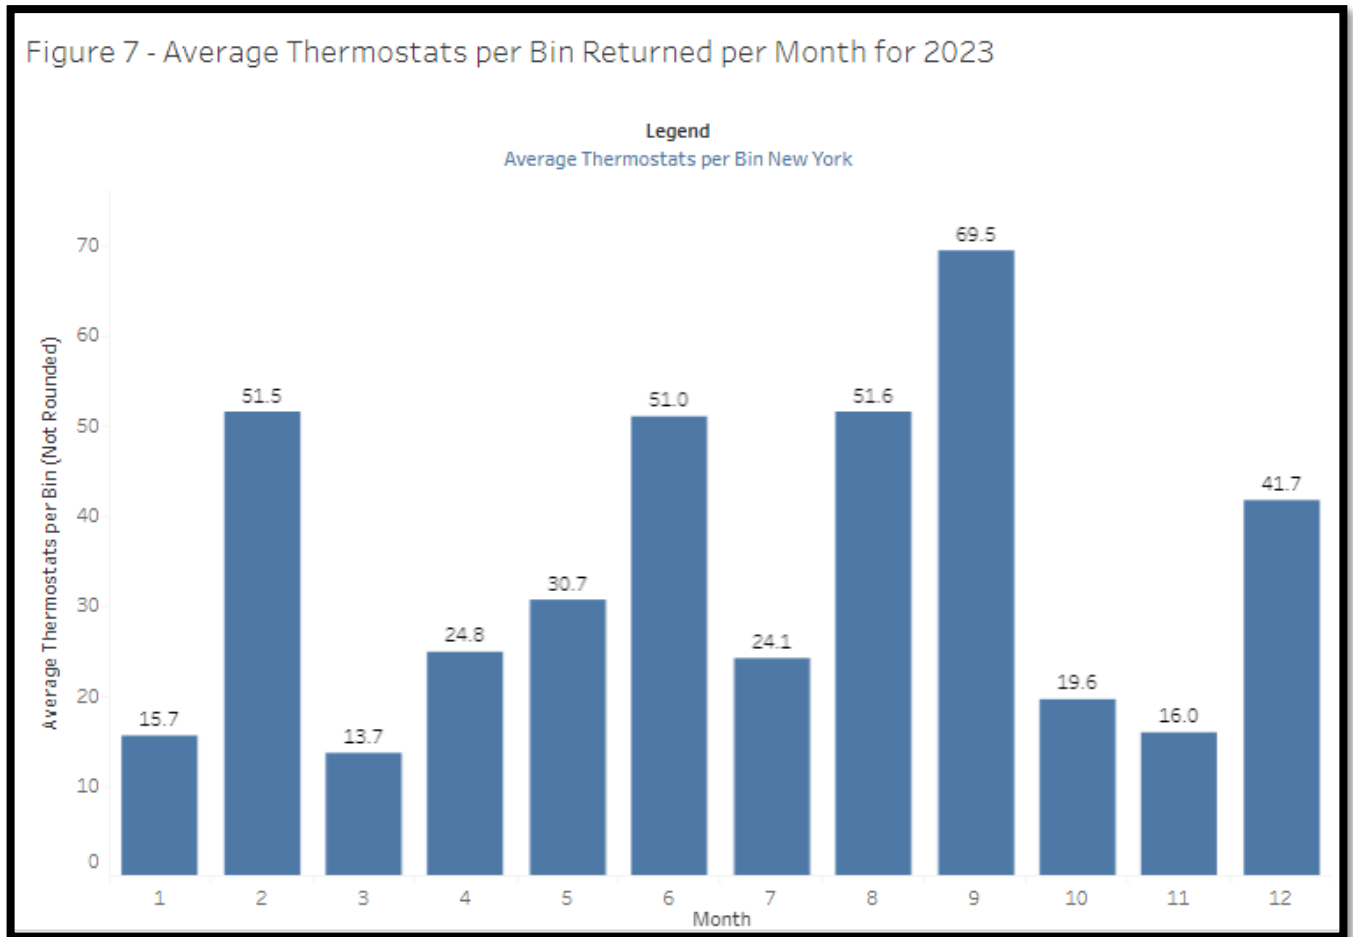

Figure 8 displays the average number of thermostats returned per bin in New York and in the U.S. since the beginning of the New York program. Nationally, the number of thermostats per bin has been decreasing annually since 2000. In New York a similar pattern is observed after 2009, with the exception of a few years. The number of thermostats per bin in 2023 (26 thermostats per bin avg.) decreased from 2022 (37 thermostats per bin avg.).

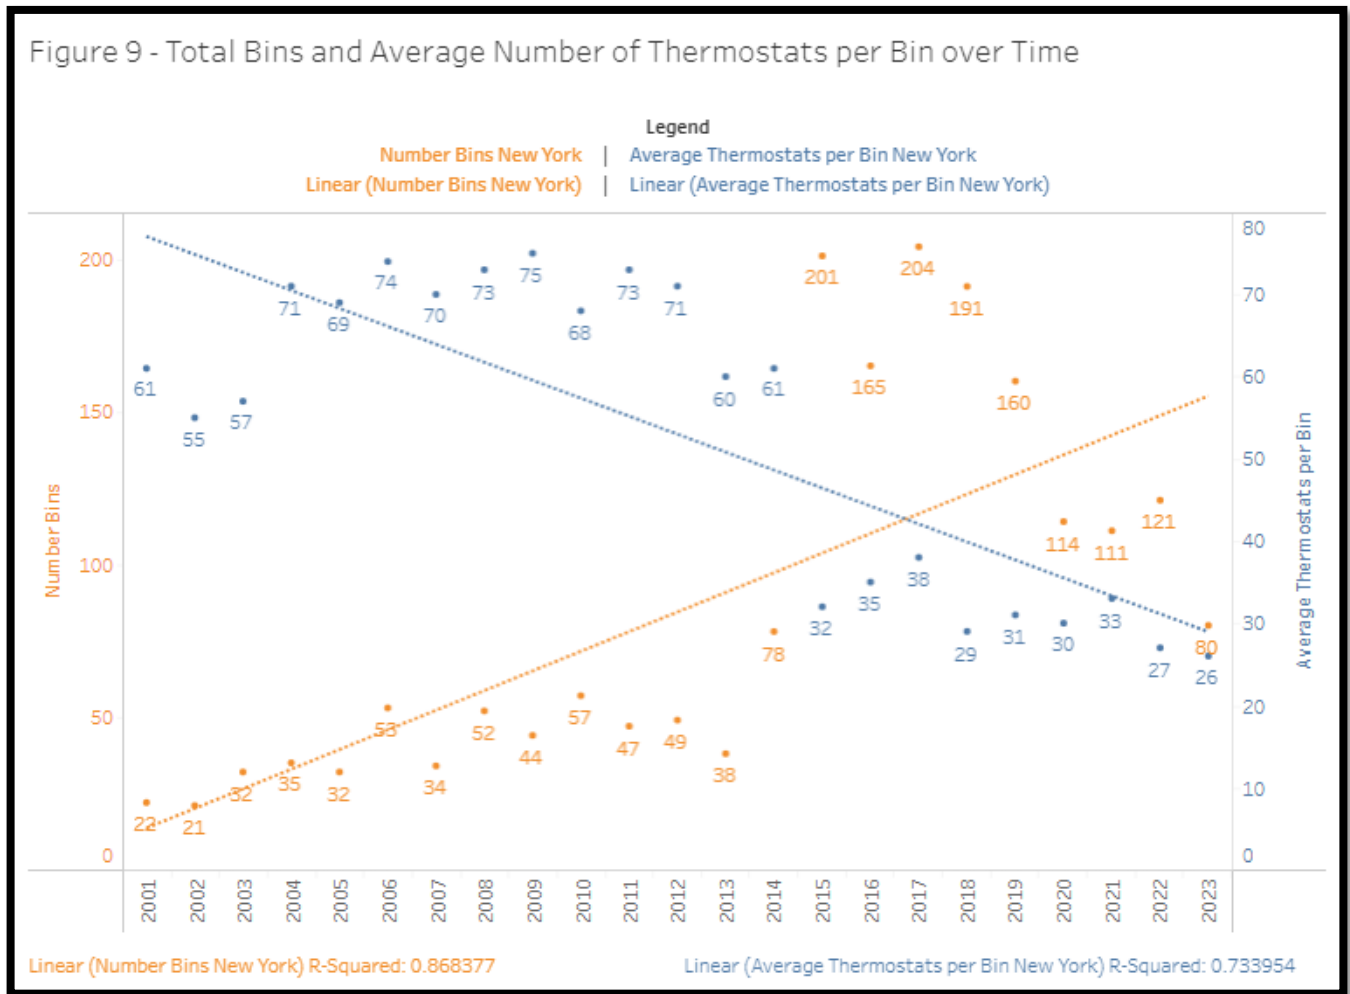

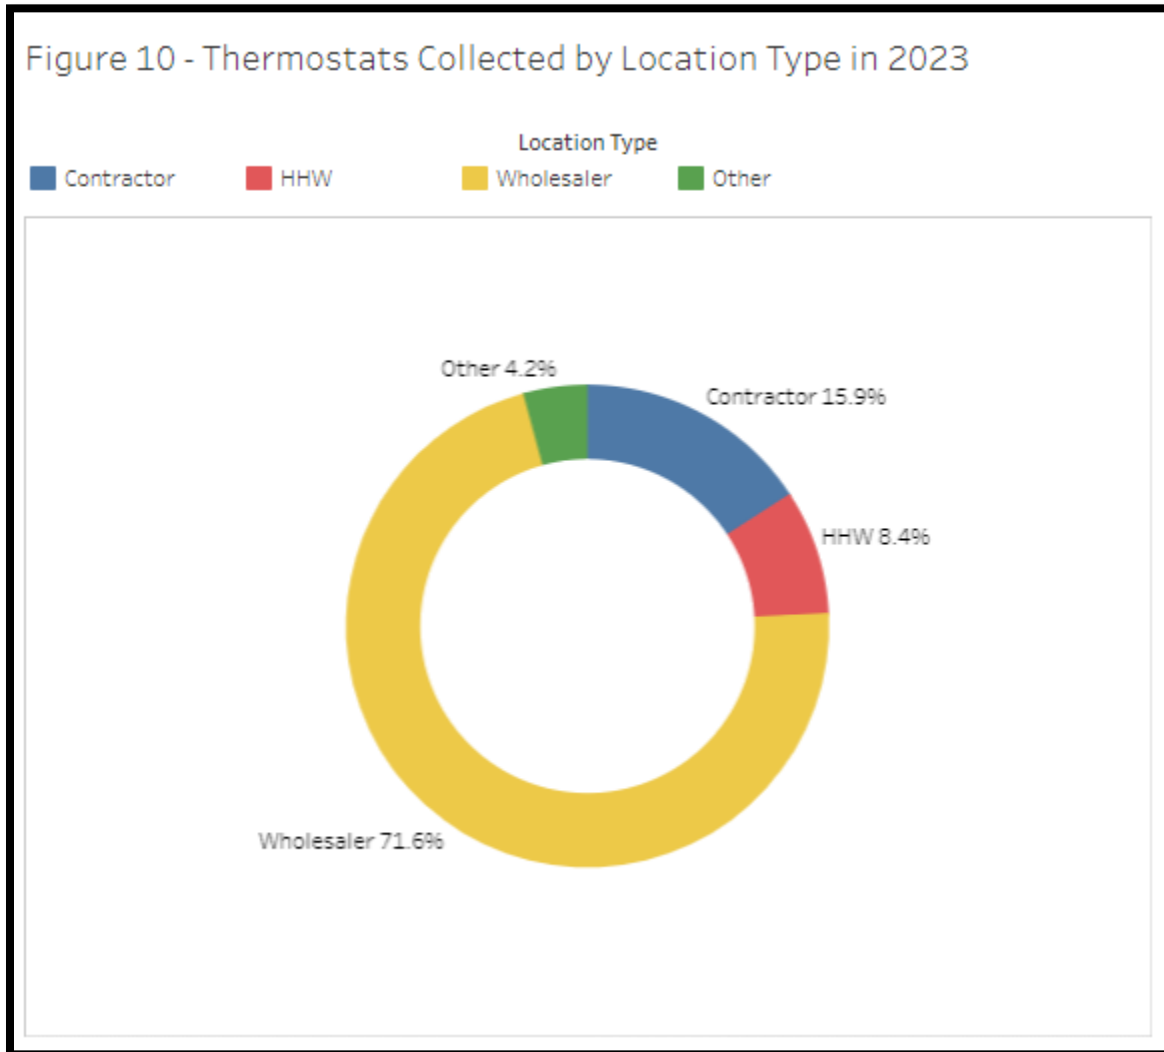

Figure 9 plots the total bins returned over time along with the average number of thermostats per bin over the same period. In general, the number of bins returned in New York increased steadily from 2000 to 2017 and has since seen a slight drop. At the same time, thermostats per bin remained consistent until 2012, after which the trend in thermostats per bin dropped. A negative correlation has been identified between the number of bins returned since 2009 and the number of thermostats per bin.

SECTION 2: Channel Partner Analysis

Section 2 of the report examines the partner locations in more detail. The majority of thermostats collected in New York were through wholesalers (71.6%) with the majority of the remaining thermostats collected by contractors (15.9%) and HHWs (8.4%). Figure 10 shows the distribution of thermostats collected by location type in 2023.

The number of bins returned in 2023 increased across contractors compared to 2022. Figure 11 displays the change in the number of bins returned by thermostat collection type over time in New York.

In 2023, 33% of New York locations possessing a collection bin sent back at least one bin for recycling. The distribution is displayed in Figure 12.

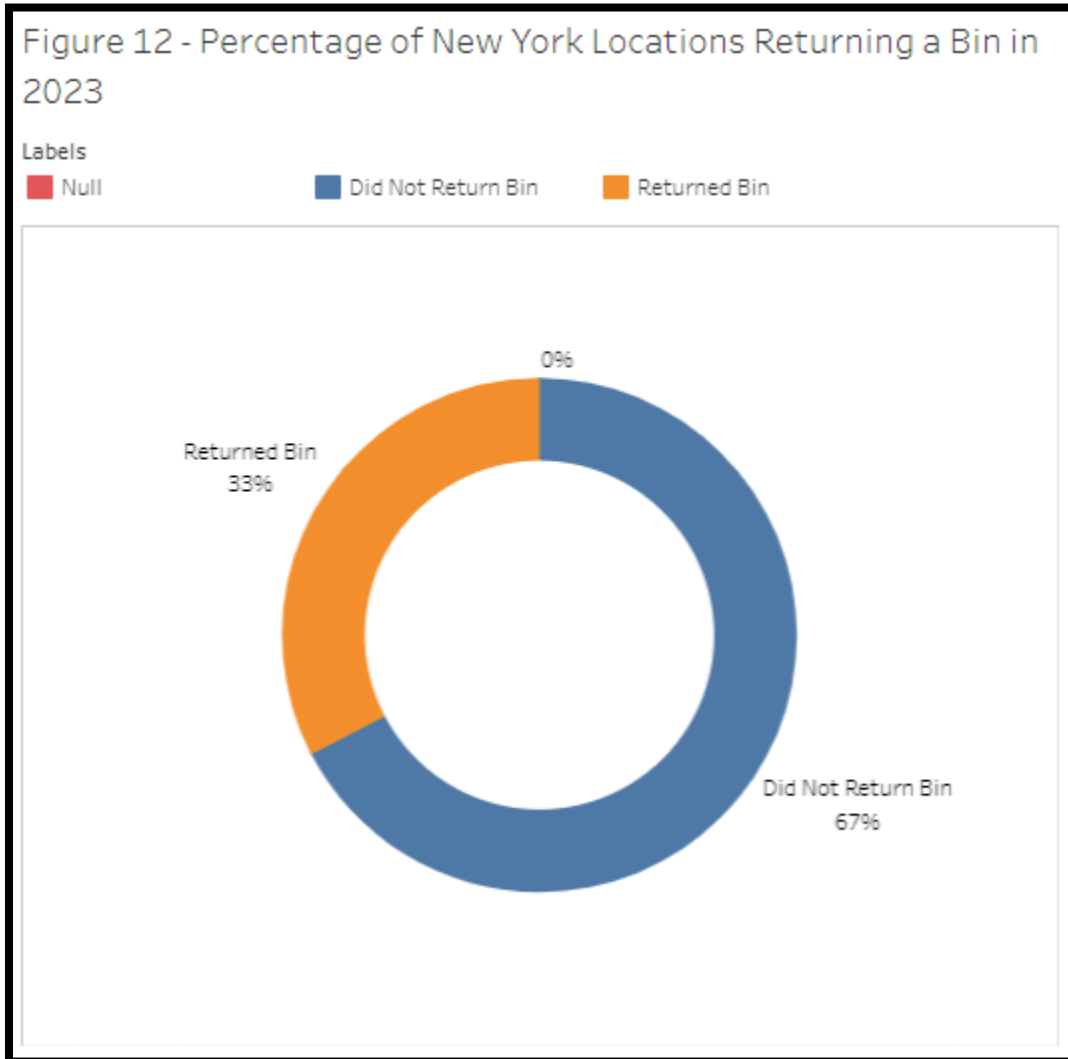

Figure 13 displays the total bins and thermostats returned by county in 2023. An analysis of the top performing counties revealed that Erie County (8 bins, 377 thermostats), Monroe County (8 bins, 268 thermostats), and Suffolk County (7 bins, 235 thermostats) returned the greatest number of bins and thermostats in 2023.

TRC partner Irr Supply (728 thermostats) returned the highest number of thermostats in New York in 2023, followed by Johnstone Supply (211 thermostats) and Homeserve USA Energy Services (133 thermostats). Apart from these locations, one other program partner returned more than 100 thermostats. Figure 14 displays the top performers in terms of total thermostats returned in 2023.

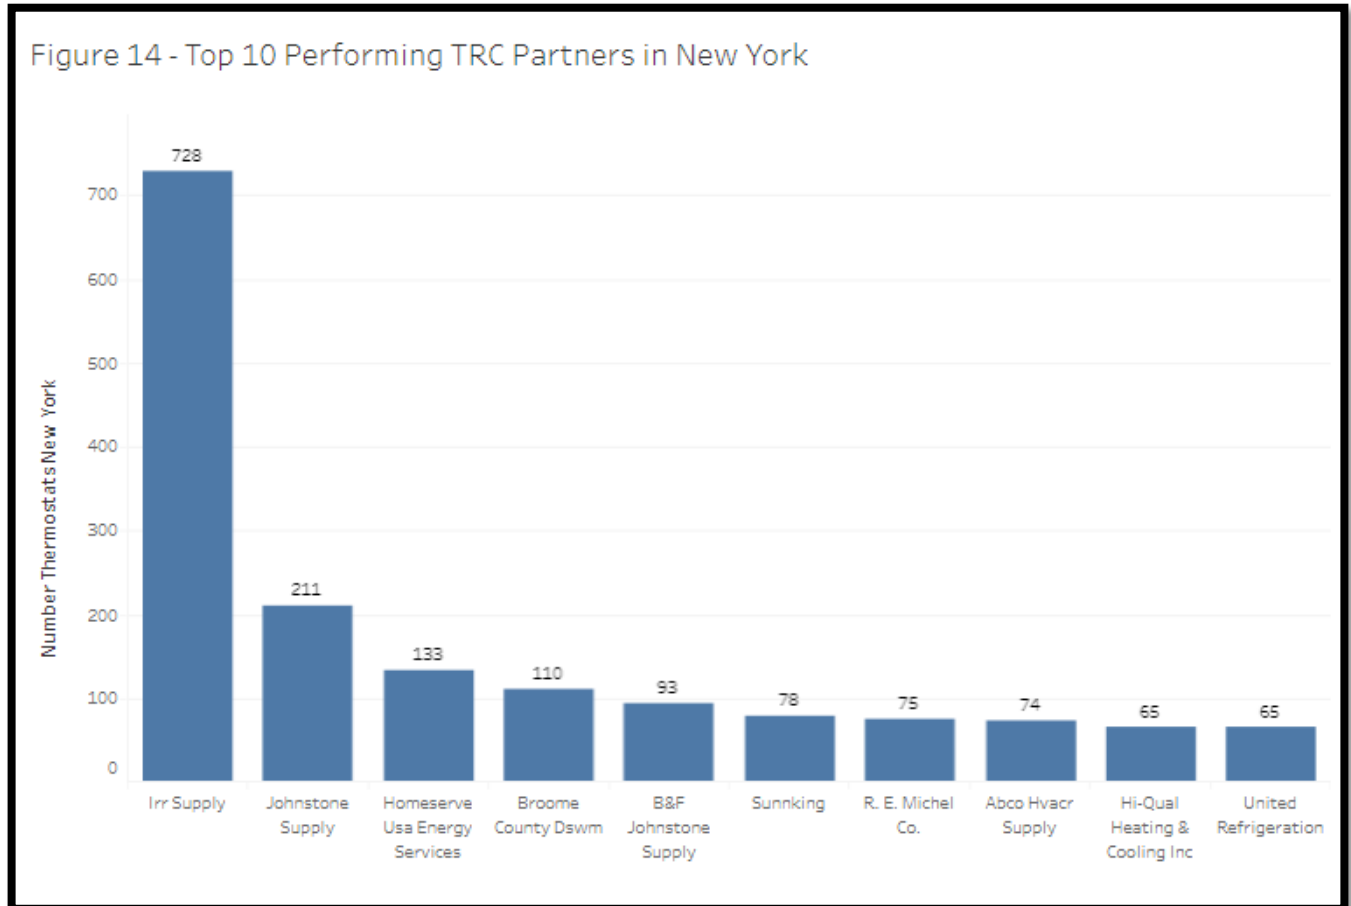

Figure 15 includes the top performers for 2023 by each of the following categories: total bins returned, total thermostats returned, and average number of thermostats per bin.

TRC conducted several activities in 2023 to increase the number of bins and thermostats returned in New York. These activities included site visits and ‘miss you’ calls to collection locations that may not have returned a bin recently. In 2023, 74 site visits were conducted in New York, and a total of 392 ‘miss you’ calls were placed. Figure 16 displays the relationship between the number of site visits per month, the bins returned per month, and the number of thermostats (in 100’s) returned per month. In 2023, there was a positive correlation between activities performed and the number of bins returned.

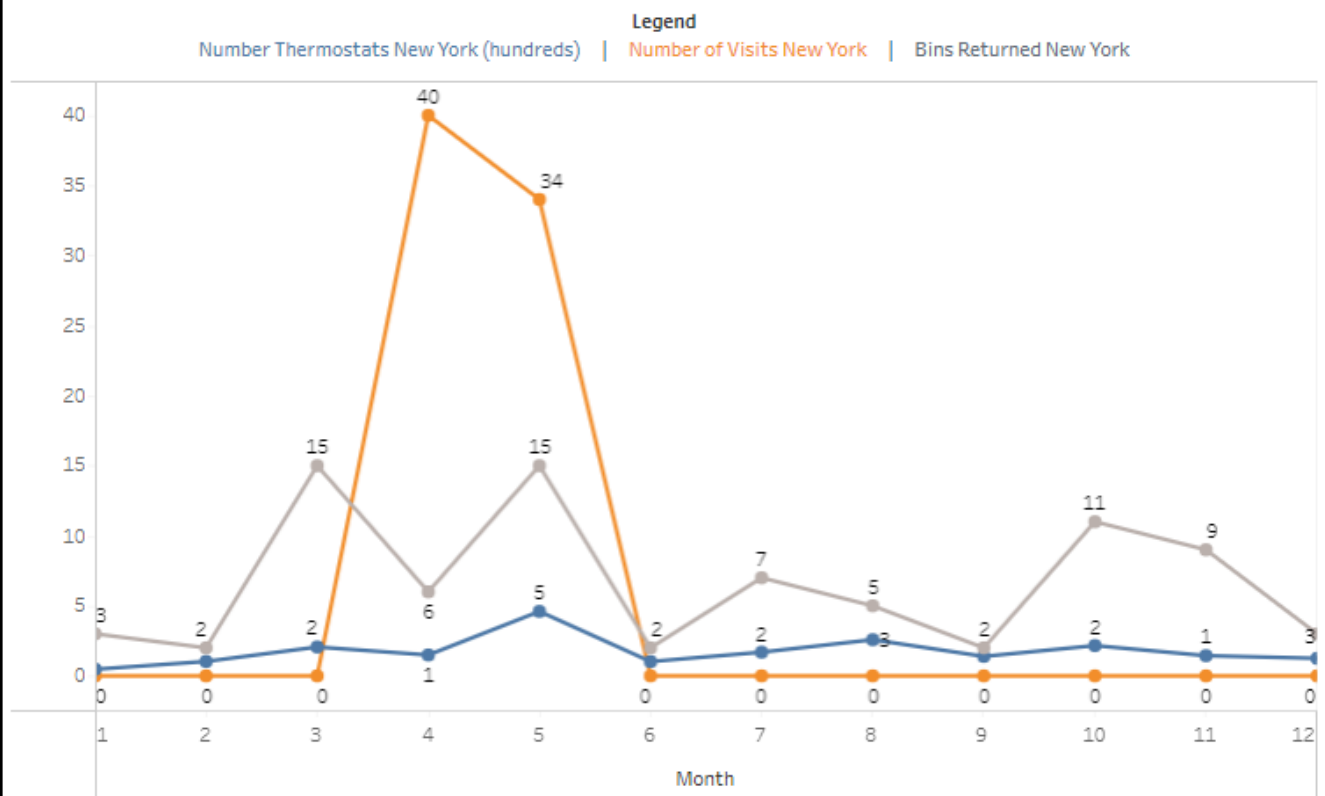

Figure 17 displays the relationship between the number of calls per month, the bins returned per month and the number of thermostats (by 100's) returned per month. Calls were placed in the months of February, March, May, and October.

Figure 17 - Relationship Between 'Miss You' Calls and Bins and Thermostats Returned per Month in 2023

SECTION 3: Comparisons to National and Other States' Data

To compare how the New York collection partners performed in 2023, the national average for the number of bins returned per location that returned at least one bin was calculated and compared to the New York average since 2012. The average number of bins does not include locations that did not return any bins in that year. It should be noted that when making comparisons each state has different regulations, a different mix of housing types, local policies, and incentives that may have a unique impact on returns. Overall, the average number of bins returned per location per year was lower in New York than the U.S. average, as shown in Figure 18.

Figure 19 displays the locations in New York that returned more than one bin in a given year, and Figure 20 displays the top 10 partners in the U.S. in terms of the number of bins returned.

Figure 21 displays total percentage of locations that actively participated in the program (active participation defined as sending back at least one bin) in 2023, for all the states that mandate thermostat returns reporting as well as the U.S. national average for all states (reporting and non-reporting). In 2023, 33% of the locations in New York returned at least one bin compared to a national average of 18%. The highest percentage of locations returning a bin in 2023 among states that mandate thermostat returns reporting was Rhode Island (73%).

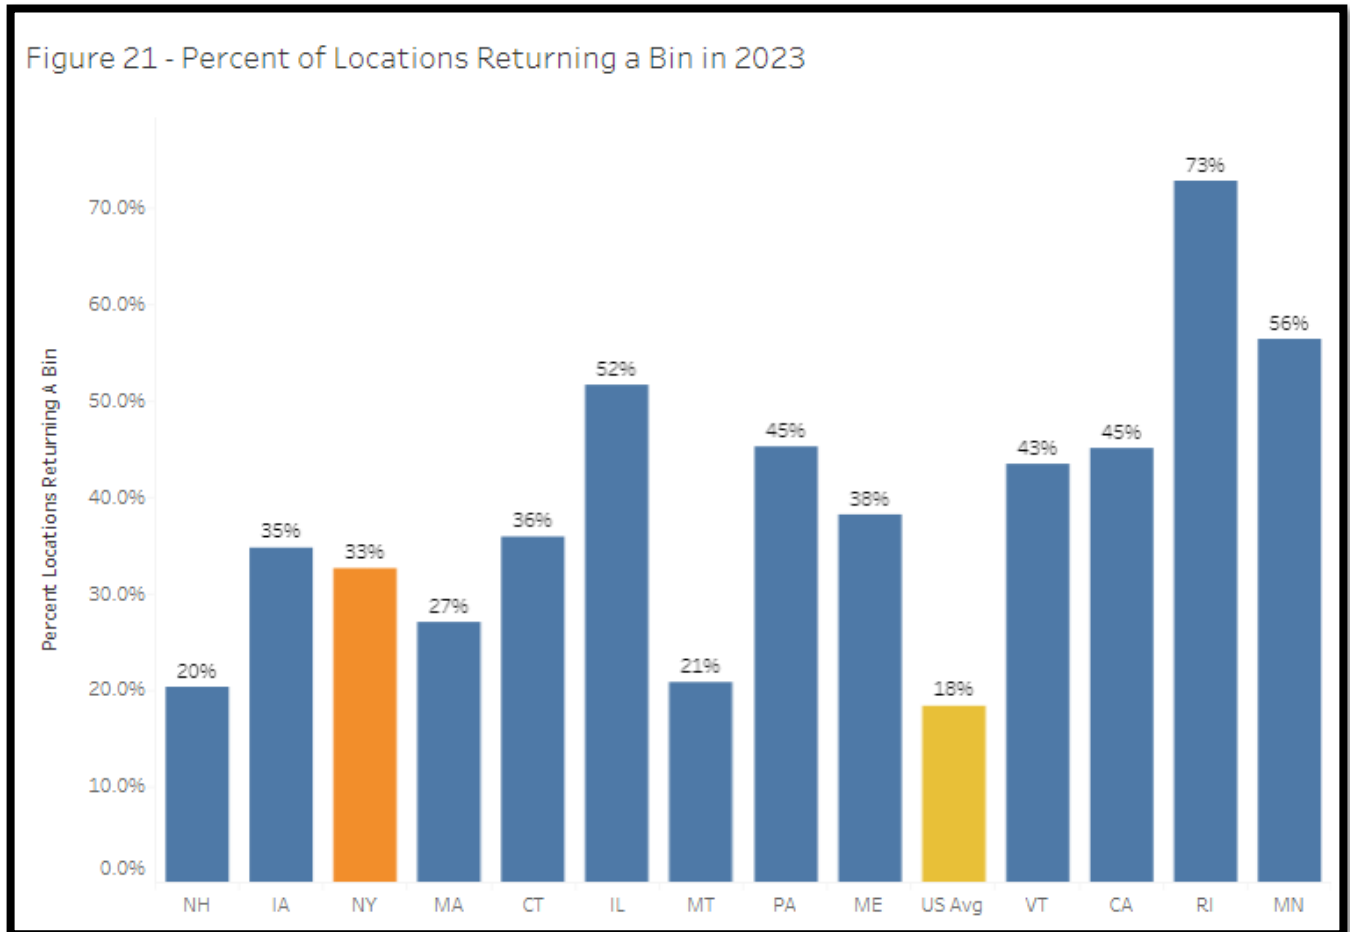

Figure 22 compares the New York and national rates for several analytics. These include total whole thermostats, bins, and loose switches collected, number of thermostats collected by total locations and per actively participating locations, number of thermostats per bin returned on average, equivalent average, number of mercury thermostat equivalents returned in 2023, and finally percent change in mercury thermostat conversion from 2022 to 2023. The equivalent average is an average of the number of switches in whole thermostats collected in New York, and it is used to represent an equivalent number of thermostats from returned loose switches. The thermostat equivalent number includes the totals of whole thermostats returned plus the number of thermostats estimated from loose switches. The states displayed are those that mandate thermostat returns reporting and the U.S. average is for all states that return bins (reporting and non-reporting).

2023 Collections by Brand

In New York, Thermostat Recycling Corporation (TRC) recovered the equivalent of 2,450 mercury thermostats from 2,118 whole mercury thermostats plus 404 mercury switches removed from thermostats. A total of 18.51 pounds of mercury was diverted from solid waste. *Please note the explanation of the converted thermostats or thermostat equivalents below.¹ An example of the mercury ampoule is shown below.

As required by the state statute, a table of thermostat brand holders with their corresponding thermostats, the number of switches and the pounds of mercury recycled is below. It is important to note that there remain non-members whose thermostats the TRC collection program recycles. They are listed in the table as “Non-Member Brands”.

¹ A mercury thermostat contains a variable amount of mercury ampoules or “switches” attached to the subbase of the thermostat. These glass ampoules often are collected in the recycling container without the intact thermostat attached to them. TRC collects and counts these loose ampoules and recycles them. To derive the converted thermostat or thermostat equivalent, the program takes the following calculations to develop the converted thermostat or thermostat equivalent. First, TRC will count the total whole (intact) thermostats collected in the recycling bins. From these units, there is an intact ampoules count. TRC then takes the intact ampoules divided by the whole (intact) thermostats or otherwise known as the conversion ratio. After the conversion ratio is calculated, TRC will multiply the loose mercury switches by the conversion ratio. Lastly, we add this result to the whole (intact) thermostats to produce the converted thermostats or thermostat equivalents.

Current Collection Locations

Small Pails and Green Bins

In 2023, TRC shipped 58 small pails to collection points around the country. We also shipped 374 new green bins. In comparison, the program shipped 201 new green bins in 2022 and 76 small pails². Collection locations either requested the new pail when they signed up to participate in the program or chose to switch out their bin with a pail due to decreased collections. The large green bins which have been the staple of the program continued to be replenished as they were returned for processing. Because the containers are reused and bar coded, we anticipate that the request for new containers will decrease as the program continues.

- Of the totals provided, TRC shipped two new small pails and seven new large bins in the state.

Collection Location Outbound Phone Calls

Our outbound phone calls have been branded internally as the “Miss You Call” process. These calls promote collection container returns and serve as a reminder to locations that have not returned any thermostats. TRC allocates these “miss you calls” to collection sites that have not returned a container in over a year. These calls serve as a friendly customer service check to see if any of the program materials need to be replenished or if missing containers need to be replaced. In total, the program called 1,432 current collection locations in 2023, compared to 1,922 in 2022. The decline in the number of calls completed is a positive sign that more locations were returning a bin without being prompted in 2023, and therefore did not require a “Miss You Call”.

- Completed 392 calls to encourage shipping the recycling container compared to 197 a year prior. A copy of the locations called can be found in the Appendix.

² New bin orders coincide with accounts that open new stores, move or lose their existing containers.

Collection Location Postcards

Postcards are sent to all locations that have not returned a container in the past year. These postcards serve as a reminder to locations and assist with updating addresses in the database. In 2023, TRC mailed 10,204 postcards.

- Mailed 1,245 reminder postcards compared to 1,085 a year prior.

Collection Location Emails

TRC emailed locations three weeks after receiving a postcard to encourage them to directly ship the recycling container. These emails contain step-by-step instructions for shipping and direct contact information for missing shipping labels or further questions. In 2023, TRC emailed 2,953 locations.

- Emailed 326 collection locations three weeks after receiving the reminder postcard to ship their container.

Collection Location Site Visits

Throughout the year, our team completed 426 site visits in numerous states. The purpose of site visits is to inform the location of the requirements of participation, what specifically the statute requires of them, assist with shipment of the recycling container, and to answer any questions they may have. We often gather valuable information during the site visit which is used to enhance TRC's outreach and update the database with current contact details.

- Visited 74 collection locations compared to 196 in 2022. A copy of the sites visited can be found in the Appendix.

HVAC Industry

The HVAC industry is our most productive and most engaged channel for recycling mercury containing thermostats. We consider this industry to be the manufacturers, wholesale distributors, and contractors which are intimately involved with the recovery of mercury thermostats. TRC took the following actions:

- Continued the "Banish Mercury Off the Planet" (BMOP) Competition encouraging all HARDI wholesalers to compete through collections. Included direct marketing to over 17,000 individual HARDI members.

- The annual competition recovered 194 pounds of mercury from 154 HVAC wholesalers. More than 300 branch locations returned collection bins during the contest period.

Waste Related Sector and Household Hazardous Waste (HHW) Industry

The waste-related sector remains an important sector for TRC to target individuals and those residents performing DIY thermostat installations. These attempts were to gain new collection locations, form better relationships with the audience and raise overall awareness of the TRC program. As a result of these learnings, TRC took the following actions:

- Scoured google alerts for HHW events to target phone call or email outreach to encourage them to use the program. Sent 21 emails to facilities, offering a free container.
- MassRecycle Podcast featured TRC on their podcast in August of 2023. [Episode 42: Demolition vs. Deconstruction: Careful Practices for a Sustainable Future - MassRecycle](#)

Digital Summary

This report summarizes all digital efforts in spreading TRC’s message to audience members in New York in 2023 – including search engine optimization (SEO) and digital advertising. Digital advertising included search engine marketing (SEM) ads through Google Performance Max; social media ads through LinkedIn; and programmatic ads through StackAdapt.

Search Engine Marketing (SEM) Ads

As part of search engine marketing (SEM), Google Ads is a digital advertising platform where advertisers can bid on search terms (or keywords) to have informational ads displayed, where ads appear alongside search results. This campaign targets people most likely to be interested in relevant content by driving traffic to various pages on the TRC website. TRC has developed a search campaign

to align with terms searched by individuals related to thermostats, mercury, mercury recycling, thermostat replacement, etc.

Quantitative Results

A quantitative summary of SEM ad performance for New York in 2023 is detailed below, with a comparison to 2022.

Metric	2023	2022
Impressions	114,370	6,218
Clicks	3,311	265
Clickthrough Rate (CTR)	2.85%	4.66%
Cost per Click (CPC)	\$0.09	\$2.07
Conversions (Find a Location, Form Downloads)	42	10

Notes

- Impressions: Number of times ads were served to viewers.
- Clicks: Number of viewers who clicked on ads
- CTR: Click-through-rate, calculated by the number of clicks divided by the number of impressions.
- CPC: Average amount paid for each click.

Search Engine Optimization (SEO)

Search Engine Optimization (SEO) is the process whereby a website is optimized through original content and on-site coding tactics to increase its chances of appearing near the top of “organic searches.” An organic search is one that appears “naturally” in a search engine like Google or Bing. In other words, an organic listing is not ranked through paid search.

Organic traffic to a website typically brings visitors who stay longer, and visit more pages, on average.

In 2023, organic search traffic for all states brought 2,069 users to the TRC website. By comparison, 806 users were attributed to organic search over the same time period in 2022.

Social Media and Programmatic Ads

Through social media and programmatic advertising, advertisers can attract large audiences on the platforms they use for social networking and website browsing. This campaign targets people with relevant interests and drives them to various pages on the TRC website. For these ads, audiences on the various platforms were subdivided into various categories, as shown in the quantitative results table below.

Below is the overall performance for New York in 2023 for each target audience and platform.

Audience	Platform	Impressions	Clicks	CTR	Conversions (Find a Location)	Conversions (Large Bin Order Form)	Conversions (Small Pail Order Form)
Consumer	StackAdapt	540,377	7,241	1.34%	6	-	-
Contractor	LinkedIn	268,493	3,258	1.21%	-	-	-
TOTAL:		808,870	10,499	1.28%	6		-

Digital Qualitative Analysis

Through paid digital advertising, TRC's various messages were shown nearly over 800,000 times to audience members in New York. Of those over 800,000 times, over 14,000 users were acquired to the website – where 48 conversions occurred. Audience members most likely to take an action from our ads were consumers through Google Performance Max ads. In terms of search engine optimization, there was an increase in measured organic website traffic from 2022 to 2023, a result of ensuring Google crawlers were allowed on all pages of the website.

Note: 2023 included a mandatory transition from Google Analytics Universal Analytics (UA) to Google Analytics 4 (GA4); as a result, some data in the report on SEO may look different from years previous.

2024 Program Modifications

Thermostat Recycling Corporation's 2024 Goals

TRC continues to set high-level annual goals for the organization. These goals assist in decision making and prioritization of activities. For the calendar year 2024, TRC plans to focus on:

- Continuing to fulfill state statutory requirements, agreements, and other arrangements for regulatory compliance.
- Focusing on education and awareness tactics geared toward homeowners and HVAC industry professionals.

Thermostat Recycling Corporation's Planned Tasks

In addition to the above goals, TRC set specific tasks on which we plan to focus. Completion of these tasks aid in the organization's overall goals.

- Roll-out public releases throughout the year.
- Survey national HVAC professionals.
- Continue the program's operational activities such as outbound phone calls, mailing reminder postcards, and visiting sites. Use collection data trends to target these initiatives.
- Attend trade shows and conferences when applicable. Look for speaking opportunities at attended events.

HOW MERCURY THERMOSTAT WASTE IS HANDLED

WASTE MERCURY-ADDED THERMOSTAT MANAGEMENT THROUGH VEOLIA ES TECHNICAL SOLUTIONS, LLC.

TRC containers with waste mercury-switch thermostats are received at a fulfillment/inventory center in Port Washington, Wisconsin (WIR000130591). The facility is owned and operated by Veolia ES Technical Solutions, L.L.C. (Veolia) under contract with TRC.

All recycling containers, including pails and bins are received at the loading dock and sent to the TRC inventory room. The container and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The containers are returned to the location that sent it in with a new prepaid address label within 3 weeks of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The thermostats and any loose bulbs collected from the containers are consolidated into a special 55-gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are captured and vented when the drum is opened.

The 55-gallon drum is then shipped to Veolia's mercury recovery facility (WID988566543) for final processing of the mercury ampules (switches). Veolia Environmental Services meets or exceeds all local, state, federal and EPA regulations for the management of the product.

The containers are returned from the storage area to the mercury recovery processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the recycling and disposal of waste within 12 months of acceptance at the processing facility.

Small quantities of thermostats are removed from the container, which is then closed again. The bulbs are removed from the thermostats and placed into processing vessel at the work station. Once the processing vessel is full, the vessel is loaded into the mercury recovery retort oven.

If a bulb breaks and the mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. The TRC inventory

and processing areas are equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to ensure that any spillage is cleaned up and not left to evaporate.

Veolia meets or exceeds all local, state, federal and EPA regulations for the management of the product. The mercury recovery facility and process are permitted by the Wisconsin Department of Natural Resources. Veolia's approvals for mercury recovery/recycling include:

- EPA - identification WID988566543
- Hazardous Waste Storage License #6008
- Hazardous Waste Treatment License (Mercury Recovery Operations) #4585
- Air Operation Permit #246076050-S01
- Storm Water General Permit #WI-S067857-4

In addition to the regulatory permits, both Veolia Port Washington facilities have developed and maintain management systems in accordance with ISO 14001-2004, OHSAS 18001-2007, and Responsible Recycling (R2:2013) Practice. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

The mercury containing ampules are retorted at Veolia's Port Washington Mineral Springs facility. The mercury is removed during the retort process. The post retort debris consists of broken glass ampules. The debris is tested for residual mercury to document the removal of the mercury to levels below the US EPA Land Disposal Restriction (LDR) levels. The debris is then disposal of as a non-hazardous solid waste at Advanced Disposal Glacier Ridge Landfill, LLC in Horicon, Wisconsin.
