2025 Collections and Evaluation

The following analytical report details the annual program performance for mercury thermostat collection in the state of Massachusetts in 2025.

A few of the program highlights for 2025 are included below:

- In 2025 the program **collected 38.2 lbs. of mercury** in Massachusetts. Since 2001, the annual quantity of mercury collected in Massachusetts has been an average of 37.1 lbs.
- The program collected **5,780 whole thermostats in 2025**. This was a 36% increase over the number of thermostats collected in 2024. Since 2001, the average thermostat count per year is 4,675.
- The average **number of whole thermostats collected per bin in 2025 was 65 thermostats**, an increase from 50 in 2024.
- The counties with the most bins and thermostats returned in 2025 were **Middlesex County (25 bins, 1,707 thermostats), Suffolk County (11 bins, 1,129 thermostats), and Hampden County (10 bins, 1,013 thermostats)**.
- In 2025, **27% of the partner locations returned at least one bin**.
- **A total of 200 'Miss You' calls were placed** in 2025 and **50 site visits** completed.
- In addition to 5,780 whole thermostats, **83 loose switches were collected**, bringing the total number of "thermostat equivalents" returned in 2025 to **5,208**.

Section 1: Program Analytics

Section 1 of this report examines the annual performance of the thermostat collection recycling program in terms of bins, thermostats, and mercury collected as well as the year-over-year progression of the program. On average, the program has collected 37.1 lbs. of mercury and 4,675 whole thermostats per year since 2001. In 2025, the program collected 38.2 lbs. of mercury from 5,780 thermostats and 83 loose switches. Figure 1 displays the total number of bins, the total number of thermostats, and the quantity of mercury collected in Massachusetts since the beginning of the program.

Figure 2 displays the number of bins collected in Massachusetts since the initiation of the collection program, as well as the total number of bins collected in the U.S. over the same period. The number of bins collected in Massachusetts has generally increased from 2000 to 2018. In 2025, bin returns increased to 89 bins.

Figure 2 - Bins Collected Over Time in Massachusetts and Nationally

The 38.2 lbs. of mercury collected in Massachusetts in 2025 reflected a 7% increase when compared to the 35.6 lbs. collected in 2024. Figure 3 displays the quantity of mercury collected in Massachusetts over time as well as the annual percent change in Massachusetts and nationally.

Figure 8 displays the average number of thermostats returned per bin in Massachusetts and in the U.S. since the beginning of the Massachusetts program. Nationally, the number of thermostats per bin has been decreasing annually since 2000. In Massachusetts a different pattern is observed, with the average fluctuating throughout the years. The number of thermostats per bin in 2025 (65 thermostats per bin avg.) increased from 2024 (50 thermostats per bin avg.).

Figure 8 - Average Number of Thermostats per Bin Returned Over Time in Massachusetts and Nationally

Figure 9 plots the total bins returned over time along with the average number of thermostats per bin over the same period. In general, the number of bins returned in Massachusetts increased from 2000 to 2018, and the average number of thermostats per bin has remained fairly steady.

SECTION 2: Channel Partner Analysis

Section 2 of the report examines the partner locations in more detail. Most thermostats collected in Massachusetts were through wholesalers (50.3%) and contractors (47.6%), with the remaining thermostats collected by HHWs (2.1%). Figure 10 shows the distribution of thermostats collected by location type in 2025.

Figure 10 - Thermostats Collected by Location Type in 2025

The number of bins returned in 2025 increased from 2024 levels across contractors and wholesalers. Figure 11 displays the change in the number of bins returned by thermostat collection type over time in Massachusetts.

Figure 11 - Thermostat Bins Returned by Location Type over Time

In 2025, 27% of Massachusetts locations possessing a collection bin sent back at least one bin for recycling. The distribution is displayed in Figure 12.

Figure 12 - Percentage of Massachusetts Locations Returning a Bin in 2025

Figure 13 displays the total bins and thermostats returned by county in 2025. An analysis of the top performing counties revealed that Middlesex County (25 bins, 1,707 thermostats), Suffolk County (11 bins, 1,129 thermostats), and Hampden County (10 bins, 1,013 thermostats) returned the greatest number of bins and thermostats in 2025.

TRC partner Home Works Energy Inc. (3,440 thermostats) returned the highest number of thermostats in Massachusetts in 2025. They are followed by F.W. Webb (330 thermostats) and American Installations (301 thermostats). It is important to note that Scanlon Associates is an account that encompasses many local contractors directly participating in TRC's program, specifics are available in the appendix – 2025 Collection Location Bin Receipts. Figure 14 displays the top performers in terms of total thermostats returned in 2025.

To compare how the Massachusetts collection partners performed in 2025, the national average for the number of bins returned per location that returned at least one bin was calculated and compared to the Massachusetts average since 2012. The average number of bins does not include locations that did not return any bins in that year. It should be noted that when making comparisons each state has different regulations, a different mix of housing types, local policies, and incentives that may have a unique impact on returns. Recently, the average number of bins returned per location per year was higher in Massachusetts than the U.S. average, as shown in Figure 18.

Figure 18 - Average Number of Bins Returned Per Location Per Year

Figure 21 displays total percentage of locations that actively participated in the program (active participation defined as sending back at least one bin) in 2025, for all the states that mandate thermostat returns reporting as well as the U.S. national average for all states (reporting and non-reporting). In 2025, 27% of the locations in Massachusetts returned at least one bin compared to a national average of 17%. The highest percentage of locations returning a bin in 2025 among states that mandate thermostat returns reporting was Rhode Island (75%).

Figure 21 - Percent of Locations Returning A Bin in 2025

Figure 22 compares the Massachusetts and national rates for several analytics. These include total whole thermostats, bins, and loose switches collected, number of thermostats collected by total locations and per actively participating locations, number of thermostats per bin returned on average, equivalent average, and number of mercury thermostat equivalents returned in 2025. The equivalent average is an average of the number of switches in whole thermostats collected in Massachusetts, and it is used to represent an equivalent number of thermostats from returned loose switches. The thermostat equivalent number includes the total of whole thermostats returned plus the number of thermostats estimated from loose switches.

Estimate of Mercury Thermostats Remaining to be Collected

Pursuant to regulations promulgated by the Department of Environmental Protection (DEP) in April 2019, TRC is required to provide “*an estimate of how many out-of-service mercury-added thermometers (sic) have yet to be collected (in Massachusetts).*”¹

TRC contends – and has stated in many forums – that no demonstrated, empirically sound method exists for estimating the number of mercury thermostats that remain in service and enter the waste stream annually to any reasonable degree of precision. The primary reason is that these products were sold over many decades by numerous manufacturers and secondary sellers and there is no comprehensive sales data available to use as a basis for tracing their installation over time in a given state or region.

Some observers have claimed that population size can serve as a predictive factor in making such estimates, but without credible sales data there is no way to build a historical correlation between the two variables. Moreover, TRC maintains that population alone tracks poorly with the number of mercury thermostats in service. There are a host of other factors that influence the prevalence of mercury thermostats in any particular region including, but not limited to, weather patterns, socio-economic conditions, building stock characteristics, state/local energy conservation policies, and so forth. Even if data on all possible predictive factors were available, the resulting estimates still would be subject to uncertainty and could not be considered determinative.

TRC’s collections in Massachusetts have mostly maintained a steady, upward trend since they first began in 2000, whereas national collections seemingly peaked in 2014 and continue to decline. There have been several ‘threshold’ years in MA wherein collections jumped to a level well above the average of the previous few years – e.g., 2003, 2012, 2018, and 2022. The results no doubt reflect the full impact of legislative action a few years earlier that established mandatory mercury thermostat recycling across the Commonwealth, replacing the previous

¹ 310 CMR 77.04; see <https://www.mass.gov/doc/310-cmr-77-collection-and-recycling-of-mercury-added-thermostats/download>,

voluntary program. This greatly increased the number of collection bins in operation, which nearly doubled from 2016 to 2018.

In addition, the last several years also saw a rise in the number of thermostats received per bin in Massachusetts, again contrasting with national figures that reveal a 50% drop in this number from 2013-2018 (See Fig 8).

Mercury thermostat sales and installation, however, have been prohibited in the Commonwealth since passage of the Mercury Management Act of 2006. In the ensuing decade and a half, federal, state, and local energy conservation initiatives have led to widespread transition to more energy efficient HVAC systems in residential sectors throughout the US, both for new construction as well as through retrofits and upgrades. Together these factors ensure that the number of mercury thermostats still in service in Massachusetts has fallen dramatically over that period.

TRC projects that annual collections are ‘regressing to the mean’ in Massachusetts and will decline further in future years.

In summary, it is not possible to estimate the number of “*out-of-service mercury-added thermometers (sic) yet to be collected*” in Massachusetts. Any such figure would be no more than a guesstimate with an unknown margin of error. TRC believes its program in the Commonwealth is operating effectively and will continue as such so long as its supply chain partners remain avid participants and the DEP provides enforcement support, if needed.

2025 Collections by Brand

In Massachusetts, Thermostat Recycling Corporation (TRC) recovered the equivalent of 5,867 mercury thermostats from 5,780 whole mercury thermostats plus 83 mercury switches removed from thermostats. A total of 38.19 pounds of mercury was diverted from solid waste. *Please note the explanation of the converted thermostats or thermostat equivalents below.² An example of the mercury ampoule is shown below.

As required by the state statute, a table of thermostat brand holders with their corresponding thermostats, the number of switches and the pounds of mercury recycled is below. It is important to note that there remain non-members whose thermostats the TRC collection program recycles. They are listed in the table as “Non-Member Brands”.

² A mercury thermostat contains a variable amount of mercury ampoules or “switches” attached to the subbase of the thermostat. These glass ampoules often are collected in the recycling container without the intact thermostat attached to them. TRC collects and counts these loose ampoules and recycles them. To derive the converted thermostat or thermostat equivalent, the program takes the following calculations to develop the converted thermostat or thermostat equivalent. First, TRC will count the total whole (intact) thermostats collected in the recycling bins. From these units, there is an intact ampoules count. TRC then takes the intact ampoules divided by the whole (intact) thermostats or otherwise known as the conversion ratio. After the conversion ratio is calculated, TRC will multiply the loose mercury switches by the conversion ratio. Lastly, we add this result to the whole (intact) thermostats to produce the converted thermostats or thermostat equivalents.

Direct Marketing (Email, Mail, Other Communications)

Current Collection Locations

Recycling Containers

In 2025, the TRC managed the strategic distribution of 49 small pails and 145 large green bins to collection points nationwide. This year-over-year adjustment—compared to 73 pails and 208 bins in 2024—reflects a maturing infrastructure where the demand for new containers has stabilized.

The program offers two primary containment solutions to accommodate varying collection volumes:

- **Small Pails:** Primarily requested by new program entrants or existing partners transitioning from larger bins to optimize space due to lower localized collection rates.
- **Large Green Bins:** These remain the foundational component of the program. Because these units are integrated with a barcode-tracking system and designed for durability, they are refurbished and recirculated upon processing.

As the program continues to maximize the lifecycle of existing assets, TRC anticipates a continued downward trend in the necessity for brand-new container shipments, representing both fiscal and environmental efficiency.

- **Regional Impact:** Of the national totals, TRC fulfilled requests for zero new small pails and eight new large bins within the state.

Outbound Phone Calls

To maintain a high rate of mercury recovery, TRC employs a proactive outreach strategy internally designated as the "Miss You" Call process. This initiative specifically targets collection sites that have not initiated a shipment within a 12-month window.

Beyond serving as a logistical reminder, these calls function as a comprehensive customer service audit. Representatives verify if site personnel require replenished materials, address missing container hardware, and ensure the facility remains compliant with recycling protocols. In 2025, TRC completed 1,776 consultations, a 36% increase over the 1,302 calls conducted in 2024. This expanded outreach confirms that many sites are still participating but may be experiencing slower accumulation periods.

- **Regional Impact:** Successfully completed 200 calls to facilitate container returns, compared to 145 in the prior fiscal year. (Detailed site logs are available in the Appendix).

Multi-Channel Communication

TRC utilizes a sequenced notification system to ensure consistent engagement with partners we have not heard from in some time:

- **Direct Mail Advocacy:** 10,251 postcards were mailed to locations with a one-year lapse in returns. These mailers act as a critical tool for database upkeep, allowing TRC to update physical addresses and point-of-contact information.
 - **Regional Impact:** Mailed 461 postcards
- **Digital Follow-up:** Three weeks following the physical mailing, TRC initiated 1,863 targeted emails. These communications provide low-friction solutions for shipping, including step-by-step digital instructions and direct links to request replacement shipping labels.
 - **Regional Impact:** Emailed 158 locations

Field Operations

Physical site visits remain a cornerstone of TRC's quality assurance. In 2025, the team conducted 383 site visits across multiple jurisdictions. These visits serve several high-priority functions:

1. **Regulatory Education:** Ensuring participants understand their specific obligations under state statutes.
2. **Logistical Support:** Providing on-site assistance for the immediate shipment of accumulated mercury.

3. Data Enrichment: Gathering qualitative field data to enhance TRC's broader outreach strategies.
- Regional Impact: Completed 50 site visits in 2025, compared to 39 in 2024. (See Appendix for full site itinerary).

HVAC Industry

The HVAC industry—encompassing manufacturers, wholesale distributors, and contractors—is the primary engine of the mercury recovery process. TRC fosters high levels of engagement through the Banish Mercury Off the Planet (BMOP) competition.

This annual event, held from May 1 through October 31, leverages competitive incentives to drive collection volume. In 2025, TRC directed marketing efforts toward more than 12,500 HARDI members, resulting in the recovery of 131.4 pounds of mercury from 292 distinct wholesale branches.

2025 BMOP Distinguished Winners:

- Top Wholesalers: Johnstone Supply, Refrigeration Sales Corp., and Allied Refrigeration.
- Leading Branch Contributors:
 1. Aireco Supply (Jessup, MD) – 6.06 lbs.
 2. Johnstone Supply Co. (Sioux City, IA) – 3.22 lbs.
 3. National Excelsior Co. (Hudson, WI) – 3.17 lbs.

Waste Related Sector and Household Hazardous Waste (HHW) Industry

TRC continues to aggressively target the DIY and residential sectors by collaborating with the waste-related and HHW industries. Recognizing that these sectors are often the first point of contact for residents performing self-installations, TRC has adopted a "real-time" outreach model.

By utilizing automated digital alerts for regional HHW events, TRC is able to provide immediate support and resources to event organizers. This proactive integration not only increases awareness but ensures that residential mercury waste is diverted into the proper recycling channels.

Digital Summary

This report summarizes all digital advertising efforts in spreading TRC’s message to audience members in Massachusetts in 2025 – including search engine optimization (SEO) and digital advertising. Digital advertising included search engine marketing (SEM) ads targeting consumers through Google Performance Max; social media ads targeting consumers through LinkedIn; and programmatic ads targeting consumers through StackAdapt.

Search Engine Optimization

Search Engine Optimization (SEO) is the process whereby a website is optimized through original content and on-site coding tactics to increase its chances of appearing near the top of “organic searches.” An organic search is one that appears “naturally” in a search engine like Google or Bing. In other words, an organic listing is not ranked through paid search.

Organic traffic to a website typically brings visitors who stay longer, and visit more pages, on average.

In 2025, organic search traffic for all states (not specific to Massachusetts) brought 6,531 users to the TRC website. By comparison, 4,103 users were attributed to organic search over the same time period in 2024.

Search Engine Marketing Ads

As part of search engine marketing (SEM), Google Ads is a digital advertising platform where advertisers can bid on search terms (or keywords) to have informational ads displayed, where ads appear alongside search results. This campaign targets people most likely to be interested in relevant content by driving traffic to various pages on the TRC website. TRC has developed a search campaign to align with terms searched by individuals related to thermostats, mercury, mercury recycling, thermostat replacement, etc.

Quantitative Results

A quantitative summary of SEM ad performance for Massachusetts in 2025 is detailed below, with a comparison to 2024.

Metric	2025	2024
Impressions	227,252	239,627
Clicks	5,278	4,737
Clickthrough Rate (CTR)	4.99%	1.98%
Cost per Click (CPC)	\$0.76	\$0.38
Conversions (Find a Location)	1,413	443

Notes

- Impressions: Number of times ads were served to viewers.
- Clicks: Number of viewers who clicked on ads
- CTR: Click-through-rate, calculated by the number of clicks divided by the number of impressions.
- CPC: Average amount paid for each click.

Social Media and Programmatic Ads

Through social media and programmatic advertising, advertisers can attract large audiences on the platforms they use for social networking and website browsing. This campaign targets people with relevant interests and drives them to various pages on the TRC website. For these ads, audiences on the various platforms were subdivided into various categories, as shown in the quantitative results table below.

Below is the overall performance for Massachusetts in 2025 for each target audience and platform.

Audience	Platform	Impressions	Clicks	CTR	Conversions (Find a Location)
Consumer	StackAdapt	313,911	8,124	2.59%	-
Contractor	LinkedIn	9,663	52	0.54%	-

TOTAL:	323,574	8,176	1.57%	-
---------------	----------------	--------------	--------------	---

Digital Qualitative Analysis

Through paid digital advertising, TRC's various messages were shown over 540,000 times to audience members in Massachusetts. Of those over 540,000 times, over 15,039 users were acquired to the website – where 1,413 conversions occurred. Audience members most likely to take an action from our ads were consumers through Google Performance Max ads. In terms of search engine optimization, organic website traffic increased by around 50% from 2024 to 2025.

2026 Program Modifications

Thermostat Recycling Corporation's 2026 Goals

TRC has set annual goals for the organization. These goals assist in decision making and prioritization of activities. For the calendar year 2026, TRC plans to focus on:

- Ensuring rigorous adherence to state statutory mandates, formal inter-agency agreements, and multifaceted regulatory frameworks to maintain programmatic compliance.
- Data-Driven Outreach and Precision Engagement: Refining the "Miss You" consultation process through enhanced data analytics. By identifying specific regional or sectoral patterns in collection lapses, TRC will deploy more targeted, high-touch interventions—including synchronized site visits and digital follow-ups—to re-engage dormant collection points more effectively.

Thermostat Recycling Corporation's Planned Tasks

In alignment with our overarching organizational objectives, TRC has identified several key tactical workstreams for the 2026 calendar year. Successful execution of these tasks is essential to maintaining our brand presence, gathering actionable market intelligence, and optimizing our outreach tasks.

- TRC will execute a strategic cadence of press releases throughout the fiscal year. These communications are designed to highlight program milestones, celebrate top-performing partners, and reinforce the environmental necessity of mercury recovery. By maintaining a consistent presence in industry and regional news cycles, we aim to heighten public awareness and maintain the program's visibility among key stakeholders.
- To ensure our programs remain responsive to the needs of the field, we will conduct extensive surveys of HVAC professionals nationwide. This research will be supplemented by geographically targeted outreach to contractors in specific high-priority regions. The data collected will provide critical insights into current recycling behaviors, barriers to participation, and opportunities for program refinement.

HOW MERCURY THERMOSTAT WASTE IS HANDLED

WASTE MERCURY-ADDED THERMOSTAT MANAGEMENT THROUGH VEOLIA ES TECHNICAL SOLUTIONS, LLC.

TRC containers with waste mercury-switch thermostats are received at a fulfillment/inventory center in Port Washington, Wisconsin (WIR000130591). The facility is owned and operated by Veolia ES Technical Solutions, L.L.C. (Veolia) under contract with TRC.

All recycling containers, including pails and bins are received at the loading dock and sent to the TRC inventory room. The container and plastic liner are opened and the contents are identified, sorted, and tallied. The following data is recorded for each bin returned and processed: bin number, business name (location name), city, state, zip code, date returned, number of thermostats and mercury switches by manufacturer and any non-conforming material.

The containers are returned to the location that sent it in with a new prepaid address label within 3 weeks of receipt. The thermostats are stored and staged in a plastic lined carton in a storage area for final processing. The containers are dated and processed in order received, first in-first out.

The thermostats and any loose bulbs collected from the containers are consolidated into a special 55-gallon drum which is labeled and dated according to regulations. The drum is sealed with a band and is only opened when contents are being added to it. Special negative pressure venting assures any fumes are captured and vented when the drum is opened.

The 55-gallon drum is then shipped to Veolia's mercury recovery facility (WID988566543) for final processing of the mercury ampules (switches). Veolia Environmental Services meets or exceeds all local, state, federal and EPA regulations for the management of the product.

The containers are returned from the storage area to the mercury recovery processing area to have the mercury bulbs removed from the plastic housing. Universal Waste Regulations require the recycling and disposal of waste within 12 months of acceptance at the processing facility.

Small quantities of thermostats are removed from the container, which is then closed again. The bulbs are removed from the thermostats and placed into processing vessel at the work station. Once the processing vessel is full, the vessel is loaded into the mercury recovery retort oven.

If a bulb breaks and the mercury spills, the work area is designed to contain the spillage and the operators are trained in the clean-up and disposal of mercury. The TRC inventory

and processing areas are equipped with special mercury vacuum cleaners and the work area is vacuumed at the end of the work day to ensure that any spillage is cleaned up and not left to evaporate.

Veolia meets or exceeds all local, state, federal and EPA regulations for the management of the product. The mercury recovery facility and process are permitted by the Wisconsin Department of Natural Resources. Veolia's approvals for mercury recovery/recycling include:

- EPA - identification WID988566543
- Hazardous Waste Storage License #6008
- Hazardous Waste Treatment License (Mercury Recovery Operations) #4585
- Air Operation Permit #246076050-S01
- Storm Water General Permit #WI-S067857-4

In addition to the regulatory permits, both Veolia Port Washington facilities have developed and maintain management systems in accordance with ISO 14001-2004, OHSAS 18001-2007, and Responsible Recycling (R2:2013) Practice. All persons who handle mercury thermostats as part of the TRC operation receive training in the handling of Hazardous Waste and Universal Waste.

The mercury containing ampules are retorted at Veolia's Port Washington Mineral Springs facility. The mercury is removed during the retort process. The post retort debris consists of broken glass ampules. The debris is tested for residual mercury to document the removal of the mercury to levels below the US EPA Land Disposal Restriction (LDR) levels. The debris is then disposal of as a non-hazardous solid waste at Advanced Disposal Glacier Ridge Landfill, LLC in Horicon, Wisconsin.
